**ASPEN INSURANCE UK, LTD.’S REPLY IN SUPPORT OF ITS MOTION
TO DISMISS & ALTERNATIVE MOTION FOR MORE DEFINITE STATEMENT**

As discussed in Aspen’s opening motion to dismiss, the 2008–2011 Aspen Following Policies provide for two triggers of coverage that must be pled by the Trust and supported with factual allegations: (1) for claims seeking damages within the “products-completed operations hazard” (or “PCOH”), which includes Mallinckrodt’s “warranties,” “representations,” and “failure to provide warnings or instructions” relative to its products and opioids generally, the Trust must allege that the claims were first made against Mallinckrodt and also reported to Aspen during the Aspen policy periods; and (2) for any alleged non-PCOH claims seeking damages unrelated to any products, the Trust must allege that the subject “bodily injury” took place during the Aspen policy periods.

As it stands, the Trust’s petition broadly seeks coverage for damages falling both *within* and *outside* the PCOH, but pleads no *facts* showing that those triggers may be satisfied and, if so, by what claims. Despite going to great lengths to convince the Court that it has sufficiently pled that the 2008-2011 Aspen Following Policies have been triggered, the Trust fails to point to even a single factual allegation in its petition either identifying the Underlying Opioid Claims for which

coverage is sought, or showing that any of the Underlying Opioid Claims seek damages for “bodily injury” that occurred during the Aspen policy periods, or showing that any of the claims were made and reported to Aspen during its policy periods. Instead, the Trust’s opposition brief attempts to skirt these issues entirely, broadly arguing that the Trust has satisfied Missouri’s fact-pleading standard by generalizing a universe of “potentially tens of thousands” of claims relative to Mallinckrodt’s and other companies’ opioid production, distribution, and marketing.

But the Trust’s opposition compounds the fatal shortcomings in its petition by again failing to provide or point to *any* identifying details regarding the Underlying Opioid Claims. This is not merely a *pro-forma* objection. These details are not only necessary to plead a claim for coverage under Missouri law, but, for a high-level excess insurer such as Aspen,¹ they are also of paramount importance to assess whether its policies will ever be impacted by the claims at issue and, if so, what terms and conditions under the different coverages are implicated by the Trust’s claims.

Missouri’s fact-pleading standard does not permit the Trust to patch together a petition out of legal conclusions supported only by vague and incomplete factual allegations, then figure out the rest in discovery. Unless and until the Trust can plead the factual allegations necessary to show what the Underlying Opioid Claims are, what they are about, what type of coverage is sought, and whether and which underlying claims trigger such coverage—something that the Trust does not even attempt to do in its opposition—the Trust cannot show entitlement to coverage under the 2008–2011 Aspen Following Policies, and its petition must be dismissed. Alternatively, if the Court is inclined to find that the bare minimum of facts has been pled, the Trust should be ordered to replead with a more definite statement of its legal theories and facts in support, so that the parties

¹ The 2008–2011 Aspen Following Policies provide coverage only after approximately \$100 million in underlying limits per policy period are exhausted by payment of covered loss.

may proceed with the forthcoming years of litigation in the most efficient and cost-effective manner—and with as little judicial guidance as to day-to-day discovery disputes—as possible.

A. The Trust’s petition should be dismissed because it fails to provide or reference any identifying details regarding the claims for which coverage is sought.

Contrary to what the Trust seeks here, “[t]rial judges have no discretion to ignore the fact pleading requirements of the Supreme Court Rules.” *See Vance v. Griggs*, 324 S.W.3d 471, 476 (Mo. Ct. App. 2010) (citing *State ex rel. Harvey v. Wells*, 955 S.W.2d 546, 547 (Mo. 1997)). To satisfy Rule 55.05, the Trust must plead facts showing that each element necessary to establish coverage is satisfied. *See* MO. SUP. CT. R. 55.05; *Gibson v. Brewer*, 952 S.W.2d 239, 245 (Mo. 1997). The purpose behind dismissal for failure to state a claim is “to permit resolution of claims as early as they are properly raised in order to avoid the *expense and delay* of meritless claims or defenses and to permit the *efficient use of scarce judicial resources*.” *Fox v. White*, 215 S.W.3d 257, 259 (Mo. Ct. App. 2007) (emphasis added) (quoting *ITT Com. Fin. Corp. v. Mid-Am. Marine Supply Corp.*, 854 S.W.2d 371, 376 (Mo. 1993) (superseded on other grounds)). This dovetails with the purpose behind Missouri’s fact-pleading standard to “present[], limit[], define[] and isolate[] the contested issues[.]” *See Gibson*, 952 S.W.2d at 245 (Mo. 1997). Blanket statements such as those relied on by the Trust to ostensibly state a claim for coverage—*e.g.*, that the claims “trigger the Defendants’ coverage obligations under the terms and conditions of the Insurance Policies and applicable law” (*see* First Am. Pet. at ¶ 127)—are legal conclusions that must be ignored by the Court in ruling on Aspen’s motion, *see, e.g., Cooper v. Minor*, 16 S.W.3d 578, 581 (Mo. 2000), particularly seeing as the various policies issued by the various insurer-defendants provide for different triggers of coverage.

The Trust turns these well-settled principles on their head by claiming that “[a] motion to dismiss should only be granted where the claims ‘have no basis in fact,’ and are instead based upon

‘mere speculation or bluff.’” *See* Opp. at 3 (citing *State ex rel. Harvey v. Wells*, 955 S.W.2d 546, 548 (Mo. 1997)). This is not the rule. In *Harvey*, the Supreme Court cautioned courts to be wary of precisely the circumstances here, recognizing that “[m]odern litigation is too expensive in time and money to be allowed to proceed upon mere speculation or bluff[,]” and that “[u]nnecessary expense should be eliminated by requiring parties, as early as possible, to abandon claims or defenses that have no basis in fact.” *State ex rel. Harvey*, 955 S.W.2d at 548.

This is exactly the rationale at issue here. The Trust claims that a pleading should not be dismissed “for mere lack of definiteness or certainty or because of informality in the statement of an essential fact” (Opp. at 3), but this downplays the defects in the Trust’s petition. As the Trust points out, the petition contains “144 paragraphs of allegations totaling 60 pages” (*id.* at 1). But apart from the Trust’s broad characterizations of opioid claims generally (*see id.* at 4-5), the Trust has not identified for the parties or the Court what the Underlying Opioid Claims **are**—for example, the names of the claimants, when and where those claims were brought, when (or even whether) those claims were ever reported to Aspen or any other insurers, or when and where the injuries at issue took place—all of which is necessary for the Trust to establish trigger of either the claims-made-and-reported PCOH coverage or the non-PCOH coverage for “bodily injury” during the policy period. The Trust has not even represented that it **has** or **will** have that information to timely produce in discovery, or that there is some place either in or outside the bankruptcy record where those claims are identified. In fact, the Trust cannot even give a true ballpark figure of the number of claims for which it seeks coverage, noting that there were 3,000 prior to the bankruptcy filing (*id.* at 5), but that there could be “potentially tens of thousands” (*id.* at 1), and that “[t]he precise number of Opioid Mass Tort Claims is not known because no claims bar date was set during the Debtors’ bankruptcy proceedings” (*id.* at 2 n.3).

The Trust attempts to shortcut these pleading defects with its conclusory statement that “[t]he policy periods for Aspen’s Policies cover November 15, 2008 to November 15, 2013—squarely within the period of the bodily injuries alleged in the Opioid Mass Tort Claims” (*see* Opp. at 5), but tellingly could not cite even a single specific allegation or exhibit or place in the bankruptcy record in support of this conclusion, instead generally citing the entire 144-paragraph, 60-page petition (*see* Opp. at 5). And while the Trust quotes a sworn declaration of a Mallinckrodt officer found in the 8,400-entry docket of the Delaware bankruptcy court (*see id.*), nothing in that document adds any of the details necessary to identify the claims that Aspen’s policies are purportedly meant to cover. The conspicuous omission of any reference to identifying details regarding the Underlying Opioid Claims in the Trust’s opposition, and the Trust’s reliance on generalized descriptions of opioid use since 1995, bely its claim that the petition’s allegations “explain how and why Aspen’s policies are triggered with respect to coverage,” and amount to exactly the kind of “speculation or bluff” that the Supreme Court cautioned against in *Harvey*.²

In a footnote, the Trust asserts that the distinction between Underlying Opioid Claims that purportedly fall within Aspen’s claims-made PCOH coverage, as opposed to Aspen’s non-PCOH General Liability coverage, is a “red herring,” explaining that the Trust is ““not **currently** pursuing claims’ under Aspen’s policies for ‘damages within the products-completed operations hazard[,]’” and that “based on the information **currently** available to it, the Trust is **at present** pursuing coverage for claims seeking damages within the [PCOH coverage] only as to [non-Aspen] policies

² The Trust also argues that Aspen’s motion should be denied because other insurers have filed answers (Opp. at 8). This assertion is irrelevant. The answering insurers have the prerogative to weigh their policy-specific issues to determine whether to move to dismiss or instead answer the petition. None of this means that the Trust’s petition satisfies the Missouri fact-pleading standard.

issued in 2016 and 2017” (*see* Opp. at 4 n.4, emphasis added). But this footnote simply underscores the petition’s shortcomings.

First, it outright contradicts the petition, which alleges in no uncertain terms that the Trust’s claimed damages “are within the coverage grants of the Insurance Policies”—collectively, not just those issued by Aspen—because they constitute damages that are both “*within* the products-completed operations hazard for claims made during the policy period” and “*outside* the products-completed operations hazard [.]” *See* First Am. Pet. at ¶ 127(c)-(d) (emphasis added). While the Trust now attempts to recharacterize the petition, those representations do not modify the allegations actually pled, which Aspen will be forced to blindly litigate, bereft of the relevant factual context, and which the Trust will doubtlessly rely on in seeking the exceedingly broad discovery that it previously served on the defendants.

Second, by its equivocation the Trust makes clear that it is leaving open all possibilities to seek coverage under both PCOH and non-PCOH coverage if it later believes that doing so would be advantageous. Therefore, the distinction between those Underlying Opioid Claims that the Trust contends arise from its “warranties,” “representations,” and “failure to provide warnings or instructions” relative to opioid products, as opposed to those claims that the Trust contends have nothing to do with the PCOH, is the *key element* necessary for the Trust to both state a claim by adequately pleading trigger and also for Aspen to assess, plead, and litigate its coverage defenses going forward. This is particularly true where, as here, it appears that all of the Underlying Opioid Claims categorically fall within the PCOH and thus cannot be covered due to the fact that they were not made against Mallinckrodt or reported to Aspen during its policy periods.

By way of example, the Petition vaguely refers to a \$30-million settlement of two unidentified Underlying Opioid Claims. *See* First Am. Pet. at ¶ 3. Aspen believes that this is likely

a veiled reference to two cases reportedly³ settled for \$30 million: *The County of Cuyahoga, Ohio, et al. v. Purdue Pharma L.P., et al.*, MDL No. 24804, Cause No. 1:17-op-45004-DAP (N.D. Ohio), and *The County of Summit, Ohio, et al. v. Purdue Pharma, LP*, MDL No. 2804, Cause No. 1:18-op-45090-DAP (N.D. Ohio). The *Cuyahoga* complaint (attached hereto as Exhibit 1) characterized Mallinckrodt as one of the “Marketing Defendants” and described its “promot[ion] of branded opioid products,” its “marketing and selling” of “its products,” and its “deceptive[] promot[ing] and maximiz[ing]” of “the use of opioids” in order to “compete” with other manufacturers’ products. *See* Ex. 1 at ¶¶ 74-80, 132. The *Cuyahoga* complaint alleged that in “promot[ing] its branded opioids...and opioids generally,” Mallinckrodt “mischaracterized the risk of addiction” and made “unsupported” claims regarding “patient function and quality of life,” that Mallinckrodt and its co-defendants “omitted known risks” of opioids in “materials they produced, sponsored or controlled,” and that Mallinckrodt falsely “promoted [its] branded opioids” as “less addictive.” *See id.* at ¶¶ 197, 249-50, 254, 277. The complaint also alleged that Mallinckrodt “emphasized or exaggerated risks of competing [non-opioid] products so that prescribers and patients would favor opioids over other therapies,” such as NSAIDs, and that Mallinckrodt’s “misrepresentations and omissions” were “misleading and contrary to [its] products’ labels.” *See id.* at ¶¶ 254, 318.

Clearly, these sorts of allegations fall within the PCOH because they involve liability arising out of Mallinckrodt’s “warranties,” “representations,” and “failure to provide warnings or instructions” relative to opioid products. Accordingly, if and when this issue is later before the Court, Aspen will submit that *Cuyahoga* cannot be covered as a matter of law unless the suit was first made against Mallinckrodt and reported to Aspen during an Aspen policy period. Because

³ *See* Jared S. Hopkins, *Mallinckrodt Agrees to \$30 Million Settlement in Ohio Opioid Litigation*, WALL STREET J., (Sept. 8, 2019, 3:35 PM), <https://www.wsj.com/articles/mallinckrodt-reaches-tentative-settlement-in-ohio-counties-opioid-litigation-11567790317>.

Cuyahoga was first filed in the Court of Common Pleas, Cuyahoga County, Ohio, on October 27, 2017—**four years** after the termination of the last Aspen Followed Policy—there should be no dispute that Aspen owes no coverage for *Cuyahoga*. But at this stage, the Trust wants to avoid pleading **any** identifying details regarding *Cuyahoga* and the other Underlying Opioid Claims because doing so would reveal—early, before the parties all become mired in costly, litigious, protracted discovery—that the claims for which coverage is sought are actually all PCOH claims subject to a claims-made-and-reported trigger that has plainly not been satisfied.

Missouri’s fact-pleading standard does not permit the Trust to shotgun-plead general entitlement to coverage, then wait until discovery to tell the parties which specific underlying claims are at issue, then wait until summary judgment to reveal how those claims are purportedly covered. *See Harvey*, 955 S.W.2d at 547 (“Fact pleading identifies, narrows and defines the issues so that the trial court and the parties know what issues are to be tried, [and] **what discovery is necessary**[.]”) (emphasis added); *State ex rel. Henley v. Bickel*, 285 S.W.3d 327, 300 (Mo. 2009) (“If a party cannot state facts sufficient to justify court action or relief, it is **fundamentally unjust** to force another to suffer the considerable expense and inconvenience of litigation. It is also a waste of judicial resources and taxpayer money.”) (emphasis added). If the Trust is allowed to replead its petition, it must completely and accurately set forth its legal theories of coverage (specifically which type of coverage it seeks for which specific claims), plus those facts on which the Trust’s burden of proving coverage depends (here, identifying details such as the names and venues of claims, dates first made and first reported, and timing of alleged “bodily injury”). Otherwise, its petition fails to state a claim.

The Trust contends that Aspen’s cited cases are distinguishable (*see* Opp. at 7), but this falls flat. Each case involved a dismissal where—like here—the plaintiffs hung their hat on legal

conclusions without the level of factual detail needed to actually support those conclusions. *See Charron v. Holden*, 111 S.W.3d 553 (Mo. Ct. App. 2003); *Hoag v. McBride & Son Inv. Co.*, 967 S.W.2d 157 (Mo. Ct. App. 1998); *Transit Cas. Co. ex rel. Pulitzer Publ'g Co. v. Transit Cas. Co. ex rel. Intervening Emps.*, 43 S.W.3d 293, 302 (Mo. 2001); *Cooper*, 16 S.W.3d at 581; *Hendricks v. Curators of Univ. of Mo.*, 308 S.W.3d 740, 747 (Mo. Ct. App. 2010). While the Trust acknowledges that those cases involved pleadings that “lacked allegations to support an element of the claim,” the same is true here.⁴

Lastly, the Trust’s opposition strongly suggests that the Trust presently has little idea what claims are actually at issue, claiming (*see* Opp. at 7) that “it is unlikely that a party seeking coverage for thousands or tens of thousands of claims would present detailed information for each claim,” and explaining that it might be necessary to provide “expert testimony regarding a random sample of claims that then would be extrapolated to the full universe of claims[.]” This is not how an insurance claim works. It is the Trust’s burden to plead and establish coverage for each underlying claim. *Am. States Ins. Co. v. Herman C. Kempker Const. Co.*, 71 S.W.3d 232, 235 (Mo. Ct. App. 2002). It is axiomatic that, in order to establish coverage, the party seeking coverage must identify the specific claims for which coverage is sought. As it stands, the Trust’s petition fails entirely to do that, and thus fails to state a claim.⁵

⁴ The Trust’s reliance on *Nichols* and *Arnold* is likewise misplaced. *Nichols* did not involve a motion to dismiss or a discussion of the pleading standard in circumstances where the factual basis of the claim was unknown. *See Nichols v. Preferred Risk Grp.*, 44 S.W.3d 886 (Mo. Ct. App. 2001). *Arnold* involved a motion to dismiss where the factual basis of the underlying claim was apparently pled, and where the motion was based on the failure to plead specific policy conditions. *See Arnold v. Am. Fam. Mut. Ins. Co.*, 987 S.W.2d 537 (Mo. Ct. App. 1999).

⁵ If the Trust cannot allege with certainty the identity of **all** Underlying Opioid Claims for which coverage is sought at this stage, it should still identify those that it **does** know about. If additional claims are identified later, the Trust can amend its petition accordingly. But the Trust cannot plead unknown claims at the outset and simply hope that discovery confirms their guesses.

B. Alternatively, the Trust should be ordered to replead with a more definite statement as to the claims for which coverage is sought.

As discussed above, while the Trust pleads that it is entitled to both claims-made-and-reported PCOH coverage and “occurrence”-based non-PCOH coverage triggered by “bodily injury” during the policy period (*see* First Am. Pet. at ¶ 127(c)-(d)), it has not pled any factual specifics regarding the claims for which it seeks each type of coverage. Instead, it has broadly alleged that the Underlying Opioid Claims run the full gamut of opioid claims plaguing the country in recent years—that there are (or may be) claims for “negligence, product liability, and other common law and statutory claims” brought by individuals, estates, “governmental entities, including states, cities, counties, and Native American tribes across the country,” as well as “numerous healthcare providers, healthcare plans, and other third-party payors,” sometimes involving joint-and-several liability and other companies’ products, sometimes involving Mallinckrodt’s own products. *See* First Am. Pet. at ¶¶ 100-03.

While such claims may ultimately implicate overarching coverage issues (*e.g.*, that they categorically fall within the claims-made PCOH coverage because they arise out of Mallinckrodt’s products, as well as its “warranties,” “representations,” and “failure to provide warnings or instructions” relative to opioid products generally), the claims are by no means “one size fits all.” They necessarily implicate different parties, insurers, time periods, causes of action, public interests, and types of injuries, damages, and other relief. As illustrated by the *Cuyahoga* example above, without the level of factual detail sought by Aspen in its motion, Aspen cannot effectively assess, plead, and litigate its coverage defenses under both its claims-made-and-reported PCOH coverage and its non-PCOH coverage for “bodily injury” during the policy period, each of which is subject to various prerequisites, conditions, and exclusions.

The concept at issue here is not a novel one. Courts around the country have long entered “*Lone Pine* orders,” *i.e.*, “pre-discovery orders designed to handle the complex issues and potential burdens on defendants and the court...by requiring plaintiffs to produce some evidence to support a credible claim,” the “basic purpose” of which “is to identify and cull potentially meritless claims and streamline litigation in complex cases.” *McManaway v. KBR, Inc.*, 265 F.R.D. 384, 385 (S.D. Ind. 2009) (internal citations omitted). In fact, a federal court sitting in Missouri employed a “quasi-*Lone Pine*” order against the Trust’s debtor, Mallinckrodt, in a uranium-exposure suit, requiring the plaintiffs to disclose “certain basic information about the nature of their claims” to Mallinckrodt within 60 days of filing suit, in order to provide the defendant and the court with “some *prima facie* showing not only of exposure, but also of causation, in order to avoid unnecessary delays and expenses in this complex litigation.” *See McClurg v. Mallinckrodt, Inc.*, No. 4:12-CV-00361-AGF, 2017 WL 2929444, at *1, *7 (E.D. Mo. July 7, 2017). The court found such an order “particularly useful” where the parties would not “engage in full discovery...demonstrating individual causation with respect to the hundreds of...Plaintiffs until a much later stage of the case.” *Id.* at *7.

While Aspen does not seek a true *Lone Pine* order in this case, the practical principles and concerns underlying such an order (and the related *McClurg* approach) are the same here. Without sufficient facts pled from the outset, Aspen will be forced to engage in costly, protracted discovery for a period of years, which will likely be beset by side-disputes along the way, only for the Trust’s true theory of coverage to be revealed, as the Trust concedes, at the expert discovery stage—even when Aspen’s high-level excess coverage may not ultimately be implicated by the Underlying Opioid Claims. Such a course would plainly be a waste of the parties’ and the Court’s resources.

A more definite statement at this early stage of the case should (if done properly) cure many or most of these concerns, if the petition is not dismissed.⁶

In sum, if the Court is not inclined to dismiss the petition outright, the Trust should be ordered to plead the additional details identified in Aspen's motion, or plead whatever identifying information is available regarding the Underlying Opioid Claims for which coverage is sought, which will be necessary for Aspen to adequately assess, plead, and litigate its coverage defenses under both its claims-made-and-reported PCOH coverage and its "occurrence"-based non-PCOH coverage. Otherwise, Aspen faces the prospect of preparing a responsive pleading with an insufficient factual basis on which to raise all applicable coverage defenses, with the groundwork set for unfettered, shotgun-style discovery that is likely to result in a plethora of disputes requiring the Court's intervention.

⁶ The cases cited by the Trust do not require a different result. Both *Koster* and *Einhaus* involved adequately-pled claims, outside the insurance context, in circumstances that do not mirror those at issue here. *See State ex rel. Koster v. Morningland of the Ozarks, LLC*, 384 S.W.3d 346, 350-52 (Mo. Ct. App. 2012) (denial of motion was proper where information sought was "uniquely in the possession" of the *moving* party, where information sought was irrelevant, and where petition contained all "necessary facts"); *Einhaus v. O. Ames Co.*, 547 S.W.2d 821, 826-27 (Mo. Ct. App. 1976) (granting motion was error where petition alleged detailed facts forming basis for claim that hammer was defective, including that it broke and that chip splintered and struck employee's face).

1. The County of Cuyahoga, Ohio, and the State of Ohio *Ex Rel.* Prosecuting Attorney of Cuyahoga County, Michael C. O'Malley (collectively "Plaintiff")¹ bring this action to prevent future harm and to redress past wrongs, against Defendants: Purdue Pharma, L.P., Purdue Pharma, Inc., The Purdue Frederick Company, Inc., Endo Health Solutions Inc., Endo Pharmaceuticals, Inc., Par Pharmaceutical, Inc., Par Pharmaceutical Companies, Inc., Janssen Pharmaceuticals, Inc., Janssen Pharmaceutica, Inc. n/k/a Janssen Pharmaceuticals, Inc., Noramco, Inc., Ortho-Mcneil-Janssen Pharmaceuticals, Inc., n/k/a Janssen Pharmaceuticals, Inc., Johnson & Johnson, Teva Pharmaceutical Industries, Ltd., Teva Pharmaceuticals USA, Inc., Cephalon, Inc., Allergan PLC f/k/a Actavis PLC, Allergan Finance, LLC, f/k/a Actavis, Inc., f/k/a Watson Pharmaceuticals, Inc., Watson Laboratories, Inc., Actavis LLC, Actavis Pharma, Inc. f/k/a Watson Pharma, Inc., Insys Therapeutics, Inc., Mallinckrodt, PLC, Mallinckrodt LLC, SpecGx LLC, Cardinal Health Inc., McKesson Corporation, AmerisourceBergen Corporation, Health Mart Systems, Inc., H.D. Smith Wholesale Drug Co., Anda, Inc., Discount Drug Mart, Inc., Prescription Supply, Inc., CVS Health Corporation, HBC Service Company, Rite Aid of Maryland, Inc. d/b/a Rite Aid Mid-Atlantic Customer Support Center Inc., Rite Aid Corporation; Walgreens Boots Alliance, Inc. a/k/a Walgreen Co., Walmart Inc., f/k/a Walmart Stores, Inc.²

¹ The term "Plaintiff" hereinafter shall refer collectively to Cuyahoga County and to the Prosecuting Attorney of Cuyahoga County, Michael C. O'Malley, except where otherwise specified.

² Modifications to the named Defendants from the First Amended Complaint to the Second Amended Complaint are as follows:

- The following are *newly added* Defendants:
 - Anda Inc,
 - Discount Drug Mart, Inc.,
 - HBC Service Company,
 - Par Pharmaceutical, Inc.,
 - Par Pharmaceutical Companies, Inc.,
 - Prescription Supply, Inc.,

Plaintiff asserts two categories of claims: claims against the pharmaceutical manufacturers of prescription opioid drugs that engaged in a massive false marketing campaign to drastically expand the market for such drugs and their own market share, and claims against entities in the supply chain that reaped enormous financial rewards by refusing to monitor and restrict the improper distribution of those drugs.

INTRODUCTION

2. This case arises from the worst man-made epidemic in modern medical history—the misuse, abuse, and over-prescription of opioids.³

3. By now, most Americans have been affected, either directly or indirectly, by the opioid disaster. But few realize that this crisis arose from the opioid manufacturers’ deliberately deceptive marketing strategy to expand opioid use, together with the distributors’ equally deliberate efforts to evade restrictions on opioid distribution. Manufacturers and distributors alike acted without regard for the lives that would be trampled in pursuit of profit.

-
- SpecGx LLC
 - The following were named as Defendants in the First Amended Complaint, but are *not named* in the Second Amended Complaint:
 - The Kroger Co., and
 - Miami-Luken, Inc.
 - The following were named in the First Amended Complaint, but their names have been *clarified and corrected* in the Second Amended Complaint:
 - “OrthoMcNeal-Janssen Pharmaceuticals, Inc. n/k/a Janssen Pharmaceuticals, Inc.” is now named as “Ortho-Mcneil-Janssen Pharmaceuticals, Inc., n/k/a Janssen Pharmaceuticals, Inc.”
 - “Watson Pharmaceuticals Inc, n/k/a Actavis, Inc.” is now named as “Allergan Finance LLC, f/k/a Actavis, Inc., f/k/a Watson Pharmaceuticals, Inc.”
 - “Wal-Mart Inc.” is now named as “Walmart Inc.”

³ Unless otherwise indicated, as used herein, the term “opioid” refers to the entire family of opiate drugs including natural, synthetic and semi-synthetic opiates.

4. Since the push to expand prescription opioid use began in the late 1990s, the death toll has steadily climbed, with no sign of slowing. The number of opioid overdoses in the United States rose from 8,000 in 1999 to over 20,000 in 2009, and over 33,000 in 2015.⁴ In the twelve months that ended in September 2017, opioid overdoses claimed 45,000 lives.

5. From 1999 through 2016, overdoses killed more than 350,000 Americans.⁵ Over 200,000 of them, more than were killed in the Vietnam War, died from opioids prescribed by doctors to treat pain.⁶ These opioids include brand-name prescription medications such as OxyContin, Opana ER, Vicodin, Subsys, and Duragesic, as well as generics like oxycodone, hydrocodone, and fentanyl.

6. Most of the overdoses from non-prescription opioids are also directly related to prescription pills. Many opioid users, having become addicted to but no longer able to obtain prescription opioids, have turned to heroin. According to the American Society of Addiction Medicine, 80% of people who initiated heroin use in the past decade started with prescription opioids—which, at the molecular level and in their effect, closely resemble heroin. In fact, people who are addicted to prescription opioids are 40 times more likely to become addicted to heroin, and the Centers for Disease Control and Prevention (“CDC”) identified addiction to prescription opioids as the strongest risk factor for heroin addiction.

⁴ *Overdose Death Rates*, Nat’l Inst. on Drug Abuse, <https://www.drugabuse.gov/related-topics/trends-statistics/overdose-death-rates> (last updated Sept. 2017).

⁵ *Understanding the Epidemic*, Ctrs. for Disease Control and Prevention, <https://www.cdc.gov/drugoverdose/epidemic/index.html> (last updated Aug. 30, 2017).

⁶ *Prescription Opioid Overdose Data*, Ctrs. for Disease Control and Prevention, <https://www.cdc.gov/drugoverdose/data/overdose.html> (last updated Aug. 1, 2017).

7. As a result, in part, of the proliferation of opioid pharmaceuticals between the late 1990s and 2015, the life expectancy for Americans decreased for the first time in recorded history. Drug overdoses are now the leading cause of death for Americans under 50.

8. In the words of Robert Anderson, who oversees death statistics at the Centers for Disease Control and Prevention, “I don’t think we’ve ever seen anything like this. Certainly not in modern times.” On October 27, 2017, the President declared the opioid epidemic a public health emergency.

9. This suit takes aim at the two primary causes of the opioid crisis: (a) a marketing scheme involving the false and deceptive marketing of prescription opioids, which was designed to dramatically increase the demand for and sale of opioids and opioid prescriptions; and (b) a supply chain scheme, pursuant to which the various entities in the supply chain failed to design and operate systems to identify suspicious orders of prescription opioids, maintain effective controls against diversion, and halt suspicious orders when they were identified, thereby contributing to the oversupply of such drugs and fueling an illegal secondary market.

10. On the demand side, the crisis was precipitated by the defendants who manufacture, sell, and market prescription opioids (“Marketing Defendants”). Through a massive marketing campaign premised on false and incomplete information, the Marketing Defendants engineered a dramatic shift in how and when opioids are prescribed. The Marketing Defendants relentlessly and methodically, but untruthfully, asserted that the risk of addiction was low when opioids were used to treat chronic pain, and overstated the benefits and trivialized the risk of the long-term use of opioids.

11. The Marketing Defendants’ goal was simple: to dramatically increase sales by convincing doctors to prescribe opioids not only for the kind of severe pain associated with

cancer or short-term post-operative pain, but also for common chronic pains, such as back pain and arthritis. They did this even though they knew that opioids were addictive and subject to abuse, and that their other claims regarding the risks, benefits, and superiority of opioids for long-term use were untrue and unfounded.

12. The Marketing Defendants' push to increase opioid sales worked. Through their publications and websites, endless stream of sales representatives, "education" programs, and other means, Marketing Defendants dramatically increased their sales of prescription opioids and reaped billions of dollars of profit as a result. Since 1999, the amount of prescription opioids sold in the U.S. nearly quadrupled. In 2016, 289 million prescriptions for opioids were filled in the U.S.—enough to medicate every adult in America around the clock for a month.

13. Meanwhile, the Defendants made blockbuster profits. In 2012 alone, opioids generated \$8 billion in revenue for drug companies. By 2015, sales of opioids grew to approximately \$9.6 billion.

14. On the supply side, the crisis was fueled and sustained by those involved in the supply chain of opioids, including manufacturers, distributors, and pharmacies (together, "Defendants"), who failed to maintain effective controls over the distribution of prescription opioids, and who instead have actively sought to evade such controls. Defendants have contributed substantially to the opioid crisis by selling and distributing far greater quantities of prescription opioids than they know could be necessary for legitimate medical uses, while failing to report, and to take steps to halt suspicious orders when they were identified, thereby exacerbating the oversupply of such drugs and fueling an illegal secondary market.

15. From the day they made the pills to the day those pills were consumed in our community [REDACTED], these manufacturers have had control over the information

regarding addiction they chose to spread and emphasize as part of their massive marketing campaign. By providing misleading information to doctors about addiction being rare and opioids being safe even in high doses, then pressuring doctors into prescribing their products by arguing, among other things, that no one should be in pain, the Marketing Defendants created a population of addicted patients who sought opioids at never-before-seen rates. The scheme worked, and through it the Marketing Defendants caused their profits to soar as more and more people became dependent on opioids. Today, as many as 1 in 4 patients who receive prescription opioids long-term for chronic pain in a primary care setting struggles with addiction. And as of 2017, overdose death rates involving prescription opioids were five times higher than they were in 1999.

16. As millions became addicted to opioids, “pill mills,” often styled as “pain clinics,” sprouted nationwide and rogue prescribers stepped in to supply prescriptions for non-medical use. These pill mills, typically under the auspices of licensed medical professionals, issue high volumes of opioid prescriptions under the guise of medical treatment. Prescription opioid pill mills and rogue prescribers cannot channel opioids for illicit use without at least the tacit support and willful blindness of the Defendants, if not their knowing support.

17. As a direct and foreseeable result of Defendants’ conduct, cities and counties across the nation, including Plaintiff, are now swept up in what the CDC has called a “public health epidemic” and what the U.S. Surgeon General has deemed an “urgent health crisis.”⁷ The increased volume of opioid prescribing correlates directly to skyrocketing addiction, overdose,

⁷ CDC, Examining the Growing Problems of Prescription Drug and Heroin Abuse (Apr. 29, 2014), available at <http://www.cdc.gov/give.washington/testimony/2014/t20140429.htm>; see also, *Letter from Vivek H. Murthy, M.D., M.B.A., 19th U.S. Surgeon General, Turn the Tide RX* (Aug. 2016), <http://turnthetiderx.org>.

and death; black markets for diverted prescription opioids; and a concomitant rise in heroin and fentanyl abuse by individuals who could no longer legally acquire—or simply could not afford—prescription opioids.

18. Thus, rather than compassionately helping patients in pain, this explosion in opioid use—and Defendants’ profits—has come at the expense of patients and Plaintiff and has caused ongoing harm and damages to Plaintiff. As the CDC director concluded in 2014: “We know of no other medication routinely used for a nonfatal condition that kills patients so frequently.”⁸

19. Defendants’ conduct in promoting opioid use, addiction, abuse, overdose and death has had severe and far-reaching public health, social services, and criminal justice consequences, including the fueling of addiction and overdose from illicit drugs such as heroin. The costs are borne by Plaintiff and other governmental entities. These necessary and costly responses to the opioid crisis include the handling of emergency responses to overdoses, providing addiction treatment, handling opioid-related investigations, arrests, adjudications, and incarcerations, treating opioid-dependent newborns in neonatal intensive care units, burying the dead, and placing thousands of children in foster care placements, among others.

20. The burdens imposed on Plaintiff are not the normal or typical burdens of government programs and services. Rather, these are extraordinary costs and losses that are directly related to Defendants’ illegal actions. The Defendants’ conduct has created a public nuisance and a blight. Governmental entities, and the services they provide their citizens, have been strained to the breaking point by this public health crisis.

⁸ *Id.*

21. Defendants have not changed their ways or corrected their past misconduct but instead are continuing to fuel the crisis.

22. Within the next hour, six Americans will die from opioid overdoses; two babies will be born dependent on opioids and begin to go through withdrawal; and drug manufacturers will earn over \$2.7 million from the sale of opioids.

23. Cuyahoga County has filed this suit to bring the devastating march of this epidemic to a halt and to hold Defendants responsible for the crisis they caused.

JURISDICTION AND VENUE

24. This Court has jurisdiction over this action pursuant to 28 U.S.C. § 1331 because Plaintiff's claims under the Racketeer Influenced and Corrupt Organizations Act ("RICO"), 18 U.S.C. § 1961 *et seq.*, raise a federal question. This Court has supplemental jurisdiction over the Plaintiff's state-law claims under 28 U.S.C. § 1367 because those claims are so related to the RICO claim as to form part of the same case or controversy.

25. This Court has personal jurisdiction over all Defendants under R.C. 2307.382 because the causes of action alleged in this Complaint arise out of each Defendant's transacting business in Ohio, contracting to supply services or goods in this state, causing tortious injury by an act or omission in this state, and because the Defendants regularly do or solicit business or engage in a persistent course of conduct or derive substantial revenue from goods used or consumed or services rendered in this state. Defendants have purposefully directed their actions towards Ohio and/or have the requisite minimum contacts with Ohio to satisfy any statutory or constitutional requirements for personal jurisdiction.

26. Venue is proper in this district pursuant to 28 U.S.C. § 1391(b)(2) in that a substantial part of the events or omissions giving rise to the claim occurred in the Northern

District of Ohio. Venue is also proper under 18 U.S.C. § 1965(a) because Defendants reside, are found, have agents, or transact their affairs in this district.

PARTIES

I. PLAINTIFFS

27. Plaintiff Cuyahoga County is a body politic and corporate pursuant to Article I, Section 1.01 of the Cuyahoga County Charter. Cuyahoga County is a political subdivision of the State of Ohio which may sue and plead in its own name. It is a chartered county pursuant to Article X, Section 3 of the Ohio Constitution with home rule powers.

28. Plaintiff is responsible for the public health, safety and welfare of its citizens.

29. Plaintiff has declared, *inter alia*, that opioid abuse, addiction, morbidity and mortality has created a serious public health and safety crisis, and is a public nuisance, and that the diversion of legally produced controlled substances into the illicit market causes or contributes to this public nuisance.

30. Plaintiff Michael C. O'Malley, joins this action in his official capacity as the Cuyahoga County Prosecutor for the County of Cuyahoga and solely with regard to the Fifth Claim for Relief, under which he brings a claim for statutory public nuisance in the name of the State of Ohio under R.C. § 3767.03.

31. The distribution and diversion of opioids into Ohio and into Cuyahoga County and surrounding areas (collectively, "Plaintiff's Community"), created the foreseeable opioid crisis and opioid public nuisance for which Plaintiff here seeks relief.

32. Plaintiff directly and foreseeably sustained all economic damages alleged herein. Defendants' conduct has exacted a financial burden for which the Plaintiff seeks relief. These damages have been suffered, and continue to be suffered directly, by the Plaintiff.

33. Plaintiff also seeks the means to abate the epidemic created by Defendants' wrongful and/or unlawful conduct.

34. Plaintiff has standing to bring an action for the opioid epidemic nuisance created by Defendants.

35. Plaintiff has standing to recover damages incurred as a result of Defendants' actions and omissions. Plaintiff has standing to bring all claims pled herein, including, *inter alia*, to bring claims under the federal RICO statute, pursuant to 18 U.S.C. § 1961(3) ("persons" include entities which can hold legal title to property) and 18 U.S.C. § 1964 ("persons" have standing).

II. DEFENDANTS

A. Marketing Defendants.

36. At all relevant times, the Marketing Defendants, each of whom is defined below, have packaged, distributed, supplied, sold, placed into the stream of commerce, labeled, described, marketed, advertised, promoted and purported to warn or purported to inform prescribers and users regarding the benefits and risks associated with the use of prescription opioid drugs. The Marketing Defendants, at all times, have manufactured and sold prescription opioids without fulfilling their legal duty to prevent diversion and report suspicious orders.

1. Purdue Entities

37. Defendant Purdue Pharma L.P. ("PPL") is a limited partnership organized under the laws of Delaware with its principal place of business in Stamford, Connecticut. None of the PPL's partners have citizenship in the State of Ohio.

38. Defendant Purdue Pharma Inc. ("PPI") is a New York corporation with its principal place of business in Stamford, Connecticut.

39. Defendant The Purdue Frederick Company, Inc. (“PFC”) is a New York corporation with its principal place of business in Stamford, Connecticut.

40. PPL, PPI, and PFC, and their DEA registrant subsidiaries and affiliates (collectively, “Purdue”) are engaged in the manufacture, promotion, distribution, and sale of opioids nationally, and in Cuyahoga County, including the following:

Product Name	Chemical Name	Schedule ⁹
OxyContin	Oxycodone hydrochloride, extended release	Schedule II
MS Contin	Morphine sulfate, extended release	Schedule II
Dilaudid	Hydromorphone hydrochloride	Schedule II
Dilaudid-HP	Hydromorphone hydrochloride	Schedule II
Butrans	Buprenorphine	Schedule III
Hysingla ER	Hydrocodone bitrate	Schedule II
Targiniq ER	Oxycodone hydrochloride and naloxone hydrochloride	Schedule II

41. Purdue made thousands of payments to physicians nationwide, including in Ohio, ostensibly for activities including participating on speakers’ bureaus, providing consulting services, assisting in post-marketing safety surveillance and other services, but in fact to deceptively promote and maximize the use of opioids.

42. OxyContin is Purdue’s highest-selling opioid. Since 2009, Purdue’s national annual sales of OxyContin have fluctuated between \$2.47 billion and \$3.1 billion, up four-fold

⁹ Since passage of the Comprehensive Drug Abuse Prevention and Control Act of 1970, 21 U.S.C. §801 et seq. (“CSA” or “Controlled Substances Act”) in 1970, opioids have been regulated as controlled substances. As controlled substances, they are categorized in five schedules, ranked in order of their potential for abuse, with Schedule I being the most dangerous. The CSA imposes a hierarchy of restrictions on prescribing and dispensing drugs based on their medicinal value, likelihood of addiction or abuse, and safety. Opioids generally had been categorized as Schedule II or Schedule III drugs; hydrocodone and tapentadol were recently reclassified from Schedule III to Schedule II. Schedule II drugs have a high potential for abuse, and may lead to severe psychological or physical dependence. Schedule III drugs are deemed to have a lower potential for abuse, but their abuse still may lead to moderate or low physical dependence or high psychological dependence.

from 2006 sales of \$800 million. OxyContin constitutes roughly 30% of the entire market for analgesic drugs (i.e., painkillers). Sales of OxyContin (launched in 1996) went from a mere \$49 million in its first full year on the market to \$1.6 billion in 2002.

43. In 2007, Purdue settled criminal and civil charges against it for misbranding OxyContin and agreed to pay the United States \$635 million—at the time, one of the largest settlements with a drug company for marketing misconduct. None of this stopped Purdue. In fact, Purdue continued to create the false perception that opioids were safe and effective for long term use, even after being caught, by using unbranded marketing methods to circumvent the system. In short, Purdue paid the fine when caught and then continued business as usual, deceptively marketing and selling billions of dollars of opioids each year.

2. Actavis Entities

44. Allergan PLC is a public limited company incorporated in Ireland with its principal place of business in Dublin, Ireland. Actavis PLC acquired Allergan PLC in March 2015, and the combined company changed its name to Allergan PLC in January 2013. Defendant Actavis, Inc. was acquired by Watson Pharmaceuticals, Inc. in October 2012, and the combined company changed its name to Actavis, Inc. as of January 2013 and then Actavis PLC in October 2013. Defendant Watson Laboratories, Inc. is a Nevada corporation with its principal place of business in Corona, California, and is a wholly owned subsidiary of Allergan PLC (Allergan Finance LLC, f/k/a Actavis, Inc., f/k/a Watson Pharmaceuticals, Inc.). Defendant Actavis Pharma, Inc. is registered to do business with the Ohio Secretary of State as a Delaware corporation with its principal place of business in New Jersey and was formerly known as Watson Pharma, Inc. Defendant Actavis LLC is a Delaware limited liability company with its principal place of business in Parsippany, New Jersey. Each of these defendants and entities is owned by Defendant Allergan PLC, which uses them to market and sell its drugs in the United

States. Collectively, these defendants and entities, and their DEA registrant subsidiaries and affiliates which manufacture, promotion, distribution, and sell prescription opioids, are referred to as “Actavis.”

45. Actavis manufactures or has manufactured the following drugs as well as generic versions of Kadian, Duragesic, and Opana in the United States:

Product Name	Chemical Name	Schedule
Kadian	Morphine sulfate, extended release	Schedule II
Norco	Hydrocodone bitartate and acetaminophen	Schedule II

46. Actavis made thousands of payments to physicians nationwide, ostensibly for activities including participating on speakers’ bureaus, providing consulting services, assisting in post-marketing safety surveillance and other services, but in fact to deceptively promote and maximize the use of opioids.

3. Cephalon Entities

47. Defendant Teva Pharmaceuticals USA, Inc. (“Teva USA”) is a Delaware corporation with its principal place of business in North Wales, Pennsylvania. Teva USA was in the business of selling generic opioids, including a generic form of OxyContin from 2005 to 2009. Teva USA is a wholly owned subsidiary of Defendant Teva Pharmaceutical Industries, Ltd. (“Teva Ltd.”), an Israeli corporation (collectively “Teva”).

48. Defendant Cephalon, Inc. is a Delaware corporation with its principal place of business in Frazer, Pennsylvania. In 2011, Teva Ltd. acquired Cephalon, Inc.

49. Teva USA and Cephalon, Inc. and their DEA registrant subsidiaries and affiliates (collectively, “Cephalon”) work together to manufacture, promote, distribute and sell both brand name and generic versions of opioids including the following:

Product Name	Chemical Name	Schedule
Actiq	Fentanyl citrate	Schedule II
Fentora	Fentanyl buccal	Schedule II

50. From 2000 forward, Cephalon has made thousands of payments to physicians nationwide, including in Ohio, many of whom were not oncologists and did not treat cancer pain, ostensibly for activities including participating on speakers' bureaus, providing consulting services, assisting in post-marketing safety surveillance and other services, but in fact to deceptively promote and maximize the use of opioids.

4. Janssen Entities

51. Defendant Johnson & Johnson ("J&J") is a New Jersey corporation with its principal place of business in New Brunswick, New Jersey.

52. Defendant Janssen Pharmaceuticals, Inc. ("Janssen Pharmaceuticals") is a Pennsylvania corporation with its principal place of business in Titusville, New Jersey, and is a wholly-owned subsidiary of J&J. J&J corresponds with the FDA regarding Janssen's products. Janssen Pharmaceuticals, Inc. was formerly known as Ortho-McNeil-Janssen Pharmaceuticals, Inc., which in turn was formerly known as Janssen Pharmaceutica, Inc.

53. Defendant Noramco, Inc. ("Noramco") is a Delaware company headquartered in Wilmington, Delaware, and was a wholly owned subsidiary of J&J and its manufacturer of active pharmaceutical ingredients until July 2016 when J&J sold its interests to SK Capital.

54. Defendant Ortho-McNeil-Janssen Pharmaceuticals, Inc. ("OMP"), now known as Janssen Pharmaceuticals, Inc., is a Pennsylvania corporation with its principal place of business in Titusville, New Jersey.

55. Defendant Janssen Pharmaceutica, Inc. (“Janssen Pharmaceutica”), now known as Janssen Pharmaceuticals, Inc., is a Pennsylvania corporation with its principal place of business in Titusville, New Jersey.

56. J&J, Janssen Pharmaceuticals, OMP, and Janssen Pharmaceutica and their DEA registrant subsidiaries and affiliates (collectively, “Janssen”) are or have been engaged in the manufacture, promotion, distribution, and sale of opioids nationally, and in Cuyahoga County. Among the drugs Janssen manufactures or manufactured are the following:

Product Name	Chemical Name	Schedule
Duragesic	Fentanyl	Schedule II
Nucynta ¹⁰	Tapentadol hydrochloride, immediate release	Schedule II
Nucynta ER	Tapentadol hydrochloride, extended release	Schedule II

57. Janssen made thousands of payments to physicians nationwide, including in Ohio, ostensibly for activities including participating on speakers’ bureaus, providing consulting services, assisting in post-marketing safety surveillance and other services, but in fact to deceptively promote and maximize the use of opioids. Together, Nucynta and Nucynta ER accounted for \$172 million in sales in 2014. Prior to 2009, Duragesic accounted for at least \$1 billion in annual sales.

58. Janssen, like many other companies, has a corporate code of conduct, which clarifies the organization’s mission, values and principles. Janssen’s employees are required to read, understand and follow its Code of Conduct for Health Care Compliance. J&J imposes this code of conduct on Janssen as a pharmaceutical subsidiary of J&J. Documents posted on J&J’s and Janssen’s websites confirm J&J’s control of the development and marketing of opioids by Janssen. Janssen’s website “Ethical Code for the Conduct of Research and Development,”

¹⁰ Depomed, Inc. acquired the rights to Nucynta and Nucynta ER from Janssen in 2015.

names only J&J and does not mention Janssen anywhere within the document. The “Ethical Code for the Conduct of Research and Development” posted on the Janssen website is J&J’s company-wide Ethical Code, which it requires all of its subsidiaries to follow.

59. The “Every Day Health Care Compliance Code of Conduct” posted on Janssen’s website is another J&J company-wide document that describes Janssen as one of the “Pharmaceutical Companies of Johnson & Johnson” and as one of the “Johnson & Johnson Pharmaceutical Affiliates.” It governs how “[a]ll employees of Johnson & Johnson Pharmaceutical Affiliates,” including those of Janssen, “market, sell, promote, research, develop, inform and advertise Johnson & Johnson Pharmaceutical Affiliates’ products.” All Janssen officers, directors, employees, sales associates must certify that they have “read, understood and will abide by” the code. The code governs all of the forms of marketing at issue in this case.

60. J&J also made payments to thousands of physicians nationwide, including in Ohio, ostensibly for activities including participating on speakers’ bureaus, providing consulting services, assisting in post-marketing safety surveillance and other services, but in fact to deceptively promote and maximize the use of opioids.

61. Information from the U.S. Department of Justice’s Office of the Inspector General shows that J&J made payments to prescribers, but does not indicate which drug was being promoted when J&J made these payments. At least one prescriber who previously served on Janssen’s speakers’ bureau received payment for speaking fees, meals, and travel from J&J. Upon information and belief, J&J would have similarly made payments to other participants in Janssen’s speakers’ bureau.

5. Endo Entities

62. Defendant Endo Health Solutions Inc. (“EHS”) is a Delaware corporation with its principal place of business in Malvern, Pennsylvania.

63. Defendant Endo Pharmaceuticals, Inc. (“EPI”) is a wholly owned subsidiary of EHS and is a Delaware corporation with its principal place of business in Malvern, Pennsylvania.

64. Defendant Par Pharmaceutical, Inc. is a Delaware corporation with its principal place of business located in Chestnut Ridge, New York. Par Pharmaceutical, Inc. is a wholly owned subsidiary of Par Pharmaceutical Companies, Inc. f/k/a Par Pharmaceutical Holdings, Inc. Defendant Par Pharmaceutical Companies, Inc. is a Delaware corporation with its principal place of business located in Chestnut Ridge, New York. Par Pharmaceutical, Inc. and Par Pharmaceutical Companies, Inc. are collectively referred to as “Par Pharmaceutical.” Par Pharmaceutical was acquired by Endo International plc. in September 2015 and is an operating company of Endo International plc.

65. EHS, EPI, and Par Pharmaceutical and their DEA registrant subsidiaries and affiliates (collectively, “Endo”) manufacture opioids sold nationally, and in Cuyahoga County. Among the drugs Endo manufactures or manufactured are the following:

Product Name	Chemical Name	Schedule
Opana ER	Oxymorphone hydrochloride, extended release	Schedule II
Opana	Oxymorphone hydrochloride	Schedule II
Percodan	Oxymorphone hydrochloride and aspirin	Schedule II
Percocet	Oxymorphone hydrochloride and acetaminophen	Schedule II
Generic	Oxycodone	Schedule II
Generic	Oxymorphone	Schedule II
Generic	Hydromorphone	Schedule II
Generic	Hydrocodone	Schedule II

66. Endo made thousands of payments to physicians nationwide, including in Ohio, ostensibly for activities including participating on speakers’ bureaus, providing consulting services, assisting in post-marketing safety surveillance and other services, but in fact to deceptively promote and maximize the use of opioids.

67. Opioids made up roughly \$403 million of Endo's overall revenues of \$3 billion in 2012, accounting for over 10% of Endo's total revenue; Opana ER yielded revenue of \$1.15 billion from 2010 to 2013. Endo also manufactures and sells generic opioids, both directly and through its subsidiaries, Par Pharmaceutical and Qualitest Pharmaceuticals, Inc., including generic oxycodone, oxymorphone, hydromorphone, and hydrocodone products.

68. The Food and Drug Administration requested that Endo remove Opana ER from the market in June 2017. The FDA relied on post-marketing data in reaching its conclusion based on risk of abuse.¹¹

6. Insys Therapeutics, Inc.

69. Insys Therapeutics, Inc. is a Delaware corporation with its principal place of business in Chandler, Arizona. Insys's principal product and source of revenue is Subsys:

Product Name	Chemical Name	Schedule
Subsys	Fentanyl	Schedule II

70. Insys made thousands of payments to physicians nationwide, including in Ohio, ostensibly for activities including participating on speakers' bureaus, providing consulting services, assisting in post-marketing safety surveillance and other services, but in fact to deceptively promote and maximize the use of opioids.

71. Subsys is a transmucosal immediate-release formulation (TIRF) of fentanyl, contained in a single-dose spray device intended for oral, under-the-tongue administration. Subsys was approved by the FDA solely for the treatment of breakthrough cancer pain.

¹¹ Press Release, U.S. Food & Drug Admin., FDA Requests Removal of Opana ER for Risks Related to Abuse. (accessed June 8, 2017).

72. In 2016, Insys made approximately \$330 million in net revenue from Subsys. Insys promotes, sells, and distributes Subsys throughout the United States, and in Cuyahoga County.

73. Insys's founder and owner was recently arrested and charged, along with other Insys executives, with multiple felonies in connection with an alleged conspiracy to bribe practitioners to prescribe Subsys and defraud insurance companies. Other Insys executives and managers were previously indicted.

7. Mallinckrodt Entities

74. Defendant Mallinckrodt plc is an Irish public limited company with its headquarters in Staines-Upon-Thames, Surrey, United Kingdom. Mallinckrodt plc was incorporated in January 2013 for the purpose of holding the pharmaceuticals business of Covidien plc, which was fully transferred to Mallinckrodt plc in June of that year. Mallinckrodt plc also operates under the registered business name Mallinckrodt Pharmaceuticals, with its U.S. headquarters in Hazelwood, Missouri. Defendant Mallinckrodt LLC is a Delaware corporation with its headquarters in Hazelwood, Missouri. Defendant SpecGx LLC is a Delaware limited liability company with its headquarters in Clayton, Missouri, and is a wholly owned subsidiary of Mallinckrodt plc. Mallinckrodt plc, Mallinckrodt LLC, and SpecGx LLC and their DEA registrant subsidiaries and affiliates (together "Mallinckrodt") manufacture, market, sell, and distribute pharmaceutical drugs throughout the United States, and in Cuyahoga County. Mallinckrodt is the largest U.S. supplier of opioid pain medications and among the top ten generic pharmaceutical manufacturers in the United States, based on prescriptions.

75. Mallinckrodt manufactures and markets two branded opioids: Exalgo, which is extended-release hydromorphone, sold in 8, 12, 16, and 32 mg dosage strengths, and Roxicodone, which is oxycodone, sold in 15 and 30 mg dosage strengths. In 2009, Mallinckrodt

Inc., a subsidiary of Covidien plc, acquired the U.S. rights to Exalgo. The FDA approved Exalgo for treatment of chronic pain in 2012. Mallinckrodt further expanded its branded opioid portfolio in 2012 by purchasing Roxicodone from Xanodyne Pharmaceuticals. In addition, Mallinckrodt developed Xartemis XR, an extended-release combination of oxycodone and acetaminophen, which the FDA approved in March 2014, and which Mallinckrodt has since discontinued. Mallinckrodt promoted its branded opioid products with its own direct sales force.

76. While it has sought to develop its branded opioid products, Mallinckrodt has long been a leading manufacturer of generic opioids. Mallinckrodt estimated that in 2015 it received approximately 25% of the U.S. Drug Enforcement Administration's ("DEA") entire annual quota for controlled substances that it manufactures. Mallinckrodt also estimated, based on IMS Health data for the same period, that its generics claimed an approximately 23% market share of DEA Schedules II and III opioid and oral solid dose medications.¹²

77. Mallinckrodt operates a vertically integrated business in the United States: (1) importing raw opioid materials, (2) manufacturing generic opioid products, primarily at its facility in Hobart, New York, and (3) marketing and selling its products to drug distributors, specialty pharmaceutical distributors, retail pharmacy chains, pharmaceutical benefit managers that have mail-order pharmacies, and hospital buying groups.

78. Among the drugs Mallinckrodt manufactures or has manufactured are the following:

¹² Mallinckrodt plc, Annual Report (Form 10-K). 5 (N5 (Nov. 29, 2016), <https://www.sec.gov/Archives/edgar/data/1567892/000156789216000098/0001567892-16-000098-index.htm>).

Product Name	Chemical Name	Schedule
Exalgo	Hydromorphone hydrochloride, extended release	Schedule II
Roxicodone	Oxycodone hydrochloride	Schedule II
Xartemis XR	Oxycodone hydrochloride and acetaminophen	Schedule II
Methadose	Methadone hydrochloride	Schedule II
Generic	Morphine sulfate, extended release	Schedule II
Generic	Morphine sulfate oral solution	Schedule II
Generic	Fentanyl transdermal system	Schedule II
Generic	Oral transmucosal fentanyl citrate	Schedule II
Generic	Oxycodone and acetaminophen	Schedule II
Generic	Hydrocodone bitartrate and acetaminophen	Schedule II
Generic	Hydromorphone hydrochloride	Schedule II
Generic	Hydromorphone hydrochloride, extended release	Schedule II
Generic	Naltrexone hydrochloride	unscheduled
Generic	Oxymorphone hydrochloride	Schedule II
Generic	Methadone hydrochloride	Schedule II
Generic	Oxycodone hydrochloride	Schedule II
Generic	Buprenorphine and naloxone	Schedule III

79. Mallinckrodt made thousands of payments to physicians nationwide, including in Ohio, ostensibly for activities including participating on speakers' bureaus, providing consulting services, assisting in post-marketing safety surveillance and other services, but in fact to deceptively promote and maximize the use of opioids.

80. Collectively, Purdue, Actavis, Cephalon, Janssen, Endo, Insys, and Mallinckrodt are referred to as "Marketing Defendants."¹³

B. Distributor Defendants

81. The Distributor Defendants are defined below. At all relevant times, the Distributor Defendants have distributed, supplied, sold, and placed into the stream of commerce

¹³ Together, Purdue, Cephalon, Janssen, and Endo are also sometimes referred to as "RICO Marketing Defendants."

the prescription opioids, without fulfilling the fundamental duty of wholesale drug distributors to detect and warn of diversion of dangerous drugs for non-medical purposes. The Distributor Defendants universally failed to comply with federal and/or state law. The Distributor Defendants are engaged in “wholesale distribution,” as defined under state and federal law. Plaintiff alleges the unlawful conduct by the Distributor Defendants is a substantial cause for the volume of prescription opioids plaguing Plaintiff’s community.

1. Cardinal Health, Inc.

82. Cardinal Health, Inc. (“Cardinal”) describes itself as a “global, integrated health care services and products company,” and is the fifteenth largest company by revenue in the U.S., with annual revenue of \$121 billion in 2016. Through its various DEA registered subsidiaries and affiliated entities, Cardinal distributes pharmaceutical drugs, including opioids, throughout the country. Cardinal is an Ohio corporation and is headquartered in Dublin, Ohio. Cardinal, including its subsidiaries and affiliated entities, has been licensed as a wholesale distributor of dangerous drugs in Ohio since 1990. Based on Defendant Cardinal’s own estimates, one of every six pharmaceutical products dispensed to United States patients travels through the Cardinal Health network.

2. AmerisourceBergen Drug Corporation

83. AmerisourceBergen Drug Corporation (“AmerisourceBergen”), through its various DEA registered subsidiaries and affiliated entities, is a wholesaler of pharmaceutical drugs that distributes opioids throughout the country. AmerisourceBergen is the eleventh largest company by revenue in the United States, with annual revenue of \$147 billion in 2016. AmerisourceBergen’s principal place of business is located in Chesterbrook, Pennsylvania, and it is incorporated in Delaware. AmerisourceBergen has been licensed as a wholesale distributor of dangerous drugs in Ohio since 1988.

3. McKesson Corporation

84. McKesson Corporation (“McKesson”) is fifth on the list of Fortune 500 companies, ranking immediately after Apple and ExxonMobil, with annual revenue of \$191 billion in 2016. McKesson, through its various DEA registered subsidiaries and affiliated entities, is a wholesaler of pharmaceutical drugs that distributes opioids throughout the country. McKesson is incorporated in Delaware, with its principal place of business in San Francisco, California.

85. In January 2017, McKesson paid a record \$150 million to resolve an investigation by the U.S. Department of Justice (“DOJ”) for failing to report suspicious orders of certain drugs, including opioids. In addition to the monetary penalty, the DOJ required McKesson to suspend sales of controlled substances from distribution centers in Ohio, Florida, Michigan and Colorado. The DOJ described these “staged suspensions” as “among the most severe sanctions ever agreed to by a [Drug Enforcement Administration] registered distributor.”

4. Anda, Inc.

86. Defendant Anda, Inc. (“Anda”), through its various DEA registered subsidiaries and affiliated entities, including but not limited to Anda Pharmaceuticals, Inc., is the fourth largest distributor of generic pharmaceuticals in the United States. Anda is registered to do business with the Ohio Secretary of State as a Florida corporation with its principal office located in Weston, Florida. In October 2016, Defendant Teva acquired Anda from Allergan plc (i.e., Defendant Actavis), for \$500 million in cash. At all times relevant to this Complaint, Anda distributed prescription opioids throughout the United States, including in Ohio and Plaintiff’s Community specifically.

5. Discount Drug Mart, Inc.

87. Defendant Discount Drug Mart, Inc. (“Discount Drug”) is an Ohio corporation with its headquarters principal place of business in Medina, Ohio. At all times relevant to this Complaint, Discount Drug distributed prescription opioids in Ohio and Plaintiff’s Community specifically.

6. Prescription Supply, Inc.

88. Prescription Supply, Inc. (“Prescription Supply”) is an Ohio corporation with its principal place of business in Northwood, Ohio. At all times relevant to this Complaint, Discount Drug distributed prescription opioids in Ohio and Plaintiff’s Community specifically.

7. HBC Service Company

89. Defendant HBC Service Company, (“HBC”) is an operating division of Giant Eagle, Inc. (“Giant Eagle”). HBC operated as a licensed distributor wholesaler in Ohio, licensed by the State of Ohio Board of Pharmacy. Giant Eagle is a Pennsylvania corporation with its principal place of business in Washington, Pennsylvania. At all times relevant to this Complaint, HBC distributed prescription opioids in Ohio and Cuyahoga County specifically.

8. CVS Health Corporation

90. Defendant CVS Health Corporation (“CVS”) is a Delaware corporation with its principal place of business in Rhode Island. CVS, through its various DEA registered subsidiaries and affiliated entities, conducts business as a licensed wholesale distributor. At all times relevant to this Complaint, CVS distributed prescription opioids throughout the United States, including in Ohio and Cuyahoga County specifically.

9. Rite-Aid of Maryland, Inc./Rite Aid Corp.

91. Defendant Rite Aid of Maryland, Inc., dba Rite Aid Mid-Atlantic Customer Support Center, Inc. and Rite Aid Corp. (“Rite Aid”), are a Delaware corporation with its

principal office located in Camp Hill, Pennsylvania. Rite Aid, through its various DEA registered subsidiaries and affiliated entities, conducts business as a licensed wholesale distributor. At all times relevant to this Complaint, Rite Aid, through its various DEA registered subsidiaries and affiliated entities, distributed prescription opioids throughout the United States, including in Ohio and Cuyahoga County specifically.

10. Walgreens Boots Alliance, Inc.

92. Defendant Walgreens Boots Alliance, Inc., also known as Walgreen Co. (“Walgreens”) is a Delaware corporation with its principal place of business in Illinois. Walgreens, through its various DEA registered subsidiaries and affiliated entities, conducts business as a licensed wholesale distributor. At all times relevant to this Complaint, Walgreens distributed prescription opioids throughout the United States, including in Ohio and Cuyahoga County specifically.

11. Wal-Mart Inc.

93. Defendant Wal-Mart Inc., formerly known as Wal-Mart Stores, Inc. (“Wal-Mart”), is a Delaware corporation with its principal place of business in Bentonville, Arkansas. Walmart, through its various DEA registered subsidiaries and affiliated entities, conducts business as a licensed wholesale distributor. At all times relevant to this Complaint, Wal-Mart distributed prescription opioids throughout the United States, including in Ohio and Cuyahoga County specifically.

12. H.D. Smith

94. Defendant HD Smith Wholesale Drug Company (“H.D. Smith”), at all relevant times, operated as a licensed distributor wholesaler in Ohio, licensed by the State of Ohio Board of Pharmacy. H.D. Smith is a Delaware corporation with its principal place of business in Springfield, Illinois. H.D. Smith is a privately held independent pharmaceuticals distributor of

wholesale brand, generic, and specialty pharmaceuticals. At all times relevant to this Complaint, H.D. Smith distributed prescription opioids throughout the United States, including in Ohio and Cuyahoga County specifically.

95. Collectively, Defendants CVS, HBC, Rite Aid, Walgreens, and Walmart are referred to as “National Retail Pharmacies.” Cardinal, McKesson, AmerisourceBergen, H.D. Smith, Anda, Discount Drug, Prescription Supply, and the National Retail Pharmacies are collectively referred to as the “Distributor Defendants.”¹⁴

96. Defendants include the above-referenced entities as well as their predecessors, successors, affiliates, subsidiaries, partnerships and divisions to the extent that they are engaged in the manufacture, promotion, distribution sale and/or dispensing of opioids.

C. Agency and Authority

97. All of the actions described in this Complaint are part of, and in furtherance of, the unlawful conduct alleged herein, and were authorized, ordered, and/or done by Defendants’ officers, agents, employees, or other representatives while actively engaged in the management of Defendants’ affairs within the course and scope of their duties and employment, and/or with Defendants’ actual, apparent, and/or ostensible authority.

¹⁴ Together, Purdue, Actavis, Cephalon, Endo, Mallinckrodt, Cardinal, McKesson, and AmerisourceBergen are sometimes referred to as “RICO Supply Chain Defendants.”

FACTUAL ALLEGATIONS

I. FACTS COMMON TO ALL CLAIMS¹⁵

A. Opioids and Their Effects

98. The term “opioid” refers to a class of drugs that bind with opioid receptors in the brain and includes natural, synthetic, and semi-synthetic opioids. Natural opioids are derived from the opium poppy. Generally used to treat pain, opioids produce multiple effects on the human body, the most significant of which are analgesia, euphoria, and respiratory depression.

99. The medicinal properties of opioids have been recognized for millennia—as has their potential for abuse and addiction. The opium poppy contains various opium alkaloids, three of which are used in the pharmaceutical industry today: morphine, codeine, and thebaine. Early use of opium in Western medicine was with a tincture of opium and alcohol called laudanum, which contains all of the opium alkaloids and is still available by prescription today. Chemists first isolated the morphine and codeine alkaloids in the early 1800s.

100. In 1827, the pharmaceutical company Merck began large-scale production and commercial marketing of morphine. During the American Civil War, field medics commonly used morphine, laudanum, and opium pills to treat the wounded, and many veterans were left with morphine addictions. By 1900, an estimated 300,000 people were addicted to opioids in the United States, and many doctors prescribed opioids solely to prevent their patients from suffering withdrawal symptoms. The nation’s first Opium Commissioner, Hamilton Wright, remarked in 1911, “The habit has this nation in its grip to an astonishing extent. Our prisons and our hospitals

¹⁵ The allegations in this complaint are made upon information and belief, including upon information immediately available to Plaintiff from the ARCOS database upon their initial and intensive review. Plaintiff reserves the right to seek leave to amend or correct this Complaint based upon further analysis of the ARCOS, IMS Health, and other data and upon further investigation and discovery.

are full of victims of it, it has robbed ten thousand businessmen of moral sense and made them beasts who prey upon their fellows . . . it has become one of the most fertile causes of unhappiness and sin in the United States.”¹⁶

101. Pharmaceutical companies tried to develop substitutes for opium and morphine that would provide the same analgesic effects without the addictive properties. In 1898, Bayer Pharmaceutical Company began marketing diacetylmorphine (obtained from acetylation of morphine) under the trade name “Heroin.” Bayer advertised heroin as a non-addictive cough and cold remedy suitable for children, but as its addictive nature became clear, heroin distribution in the U.S. was limited to prescription only in 1914 and then banned altogether a decade later.

102. Although heroin and opium became classified as illicit drugs, there is little difference between them and prescription opioids. Prescription opioids are synthesized from the same plant as heroin, have similar molecular structures, and bind to the same receptors in the human brain.

103. Due to concerns about their addictive properties, prescription opioids have usually been regulated at the federal level as Schedule II controlled substances by the U.S. Drug Enforcement Administration (“DEA”) since 1970.

104. Throughout the twentieth century, pharmaceutical companies continued to develop prescription opioids like Percodan, Percocet, and Vicodin, but these opioids were generally produced in combination with other drugs, with relatively low opioid content.

¹⁶ Nick Miroff, *From Teddy Roosevelt to Trump: How Drug Companies Triggered an Opioid Crisis a Century Ago*, The Wash. Post (Oct. 17, 2017), https://www.washingtonpost.com/news/retropolis/wp/2017/09/29/the-greatest-drug-fiends-in-the-world-an-american-opioid-crisis-in-1908/?utm_term=.7832633fd7ca.

105. In contrast, OxyContin, the product whose launch in 1996 ushered in the modern opioid epidemic, is pure oxycodone. Purdue initially made it available in the following strengths: 10 mg, 15 mg, 20 mg, 30 mg, 40 mg, 60 mg, 80 mg, and 160 mg. The weakest OxyContin delivers as much narcotic as the strongest Percocet, and some OxyContin tablets delivered sixteen times that.

106. Medical professionals describe the strength of various opioids in terms of morphine milligram equivalents (“MME”). According to the CDC, doses at or above 50 MME/day double the risk of overdose compared to 20 MME/day, and one study found that patients who died of opioid overdose were prescribed an average of 98 MME/day.

107. Different opioids provide varying levels of MMEs. For example, just 33 mg of oxycodone provides 50 MME. Thus, at OxyContin’s twice-daily dosing, the 50 MME/day threshold is nearly reached by a prescription of 15 mg twice daily. One 160 mg tablet of OxyContin, which Purdue took off the market in 2001, delivered 240 MME.

108. The wide variation in the MME strength of prescription opioids renders misleading any effort to capture “market share” by the number of pills or prescriptions attributed to Purdue or other manufacturers. Purdue, in particular, focuses its business on branded, highly potent pills, causing it to be responsible for a significant percent of the total amount of MME in circulation, even though it currently claims to have a small percentage of the market share in terms of pills or prescriptions.

109. Fentanyl is a synthetic opioid that is 100 times stronger than morphine and 50 times stronger than heroin. First developed in 1959, fentanyl is showing up more and more often in the market for opioids created by Marketing Defendants’ promotion, with particularly lethal consequences.

110. The effects of opioids vary by duration. Long-acting opioids, such as Purdue's OxyContin and MS Contin, Janssen's Nucynta ER and Duragesic, Endo's Opana ER, and Actavis's Kadian, are designed to be taken once or twice daily and are purported to provide continuous opioid therapy for, in general, 12 hours. Short-acting opioids, such as Cephalon's Actiq and Fentora, are designed to be taken in addition to long-acting opioids to address "episodic pain" (also referred to as "breakthrough pain") and provide fast-acting, supplemental opioid therapy lasting approximately 4 to 6 hours. Still other short-term opioids, such as Insys's Subsys, are designed to be taken in addition to long-acting opioids to specifically address breakthrough cancer pain, excruciating pain suffered by some patients with end-stage cancer. The Marketing Defendants promoted the idea that pain should be treated by taking long-acting opioids continuously and supplementing them by also taking short-acting, rapid-onset opioids for episodic or "breakthrough" pain.

111. Patients develop tolerance to the analgesic effect of opioids relatively quickly. As tolerance increases, a patient typically requires progressively higher doses in order to obtain the same perceived level of pain reduction. The same is true of the euphoric effects of opioids—the "high." However, opioids depress respiration, and at very high doses can and often do arrest respiration altogether. At higher doses, the effects of withdrawal are more severe. Long-term opioid use can also cause hyperalgesia, a heightened sensitivity to pain.

112. Discontinuing opioids after more than just a few weeks of therapy will cause most patients to experience withdrawal symptoms. These withdrawal symptoms include: severe anxiety, nausea, vomiting, headaches, agitation, insomnia, tremors, hallucinations, delirium, pain, and other serious symptoms, which may persist for months after a complete withdrawal from opioids, depending on how long the opioids were used.

113. As a leading pain specialist doctor put it, the widespread, long-term use of opioids “was a *de facto* experiment on the population of the United States. It wasn’t randomized, it wasn’t controlled, and no data was collected until they started gathering death statistics.”

B. The Resurgence of Opioid Use in the United States

1. The Sackler Family Integrated Advertising and Medicine

114. Given the history of opioid abuse in the U.S. and the medical profession’s resulting wariness, the commercial success of the Marketing Defendants’ prescription opioids would not have been possible without a fundamental shift in prescribers’ perception of the risks and benefits of long-term opioid use.

115. As it turned out, Purdue Pharma was uniquely positioned to execute just such a maneuver, thanks to the legacy of a man named Arthur Sackler. The Sackler family is the sole owner of Purdue and one of the wealthiest families in America, with a net worth of \$13 billion as of 2016. The company’s profits go to Sackler family trusts and entities.¹⁷ Yet the Sacklers have avoided publicly associating themselves with Purdue, letting others serve as the spokespeople for the company.

116. The Sackler brothers—Arthur, Mortimer, and Raymond—purchased a small patent-medicine company called the Purdue Frederick Company in 1952. It was Arthur Sackler who created the pharmaceutical advertising industry as we know it, laying the groundwork for the OxyContin promotion that would make the Sacklers billionaires.

117. Arthur Sackler was both a psychiatrist and a marketing executive. He pioneered both print advertising in medical journals and promotion through physician “education” in the

¹⁷ David Armstrong, *The Man at the Center of the Secret OxyContin Files*, STAT News (May 12, 2016), <https://www.statnews.com/2016/05/12/man-center-secret-oxycontin-files/>.

form of seminars and continuing medical education courses. He also understood the persuasive power of recommendations from fellow physicians, and did not hesitate to manipulate information when necessary. For example, one promotional brochure produced by his firm for Pfizer showed business cards of physicians from various cities as if they were testimonials for the drug, but when a journalist tried to contact these doctors, he discovered that they did not exist.¹⁸

118. It was Arthur Sackler who, in the 1960s, made Valium into the first \$100-million drug, so popular it became known as “Mother’s Little Helper.” When Arthur’s client, Roche, developed Valium, it already had a similar drug, Librium, another benzodiazepine, on the market for treatment of anxiety. So Arthur invented a condition he called “psychic tension”—essentially stress—and pitched Valium as the solution.¹⁹ The campaign, for which Arthur was compensated based on volume of pills sold,²⁰ was a remarkable success.

119. Arthur Sackler created not only the advertising for his clients but also the vehicle to bring their advertisements to doctors—a biweekly newspaper called the *Medical Tribune*, which was distributed for free to doctors nationwide. Arthur also conceived a company now called IMS Health Holdings Inc., which monitors prescribing practices of every doctor in the U.S. and sells this valuable data to pharmaceutical companies like Marketing Defendants, who utilize it to target and tailor their sales pitches to individual physicians.

²⁰ Meier, *supra* note 18, at 201-203.

2. Purdue Developed and Aggressively Promoted OxyContin

120. After the Sackler brothers acquired the Purdue Frederick Company in 1952, Purdue sold products ranging from earwax remover to antiseptic, and it became a profitable business. As an advertising executive, Arthur Sackler was not involved, on paper at least, in running Purdue, which would have been a conflict of interest. Raymond Sackler became Purdue's head executive, while Mortimer Sackler ran Purdue's UK affiliate.

121. In the 1980s, Purdue, through its UK affiliate, acquired a Scottish drug producer that had developed a sustained-release technology suitable for morphine. Purdue marketed this extended-release morphine as MS Contin, and it quickly became Purdue's bestseller. As the patent expiration for MS Contin loomed, Purdue searched for a drug to replace it. Around that time, Raymond's oldest son, Richard Sackler, who was also a trained physician, became more involved in the management of the company. Richard had grand ambitions for the company; according to a long-time Purdue sales representative, "Richard really wanted Purdue to be big—I mean *really* big."²¹ Richard believed Purdue should develop another use for its "Contin" timed-release system.

122. In 1990, Purdue's vice president of clinical research, Robert Kaiko, sent a memo to Richard and other executives recommending that the company work on a pill containing oxycodone. At the time, oxycodone was perceived as less potent than morphine, largely because it was most commonly prescribed as Percocet, a relatively weak oxycodone-acetaminophen combination pill. MS Contin was not only approaching patent expiration but had always been limited by the stigma associated with morphine. Oxycodone did not have that problem, and

²¹ Christopher Glazek, *The Secretive Family Making Billions from the Opioid Crisis*, Esquire (Oct. 16, 2017), <http://www.esquire.com/news-politics/a12775932/sackler-family-oxycontin/>.

what's more, it was sometimes mistakenly called "oxycodone," which also contributed to the perception of relatively lower potency, because codeine is weaker than morphine. Purdue acknowledged using this to its advantage when it later pled guilty to criminal charges of "misbranding" in 2007, admitting that it was "well aware of the incorrect view held by many physicians that oxycodone was weaker than morphine" and "did not want to do anything 'to make physicians think that oxycodone was stronger or equal to morphine' or to 'take any steps . . . that would affect the unique position that OxyContin'" held among physicians.²²

123. For Purdue and OxyContin to be "*really* big," Purdue needed to both distance its new product from the traditional view of narcotic addiction risk, and broaden the drug's uses beyond cancer pain and hospice care. A marketing memo sent to Purdue's top sales executives in March 1995 recommended that if Purdue could show that the risk of abuse was lower with OxyContin than with traditional immediate-release narcotics, sales would increase.²³ As discussed below, Purdue did not find or generate any such evidence, but this did not stop Purdue from making that claim regardless.

124. Armed with this and other misrepresentations about the risks and benefits of its new drug, Purdue was able to open an enormous untapped market: patients with non-end-of-life, non-acute, everyday aches and pains. As Dr. David Haddox, a Senior Medical Director at Purdue, declared on the Early Show, a CBS morning talk program, "There are 50 million patients in this country who have chronic pain that's not being managed appropriately every single day. OxyContin is one of the choices that doctors have available to them to treat that."²⁴

[REDACTED]

128. Purdue has generated estimated sales of more than \$35 billion from opioids since 1996, raking in more than \$3 billion in 2015 alone. Remarkably, its opioid sales continued to climb even after a period of media attention and government inquiries regarding OxyContin abuse in the early 2000s and a criminal investigation culminating in guilty pleas in 2007. Purdue proved itself skilled at evading full responsibility and continuing to sell through the controversy. The company's annual opioid sales of \$3 billion in 2015 represent a four-fold increase from its 2006 sales of \$800 million.

129. One might imagine that Richard Sackler's ambitions have been realized. But in the best tradition of family patriarch Arthur Sackler, Purdue has its eyes on even greater profits. Under the name of Mundipharma, the Sacklers are looking to new markets for their opioids—employing the exact same playbook in South America, China, and India as they did in the United States.

130. In May 2017, a dozen members of Congress sent a letter to the World Health Organization, warning it of the deceptive practices Purdue is unleashing on the rest of the world through Mundipharma:

We write to warn the international community of the deceptive and dangerous practices of Mundipharma International—an arm of Purdue Pharmaceuticals. The greed and recklessness of one company and its partners helped spark a public health crisis in the United States that will take generations to fully repair. We urge the World Health Organization (WHO) to do everything in its power to avoid allowing the same people to begin a worldwide opioid epidemic. Please learn from our experience and do not allow Mundipharma to carry on Purdue's deadly legacy on a global stage. . . .

Internal documents revealed in court proceedings now tell us that since the early development of OxyContin, Purdue was aware of

the high risk of addiction it carried. Combined with the misleading and aggressive marketing of the drug by its partner, Abbott Laboratories, Purdue began the opioid crisis that has devastated American communities since the end of the 1990s. Today, Mundipharma is using many of the same deceptive and reckless practices to sell OxyContin abroad. . . .

In response to the growing scrutiny and diminished U.S. sales, the Sacklers have simply moved on. On December 18, the Los Angeles Times published an extremely troubling report detailing how in spite of the scores of lawsuits against Purdue for its role in the U.S. opioid crisis, and tens of thousands of overdose deaths, Mundipharma now aggressively markets OxyContin internationally. In fact, Mundipharma uses many of the same tactics that caused the opioid epidemic to flourish in the U.S., though now in countries with far fewer resources to devote to the fallout.²⁶

131. With the opioid epidemic in the United States now a national public health emergency, Purdue announced on February 9, 2018, that it had reduced its sales force and would no longer promote opioids directly to prescribers. Under this new policy, sales representatives will no longer visit doctors' offices to discuss opioid products. Despite its new policy, however, Purdue continues to use the same aggressive sales tactics to push opioids in other countries. Purdue's pivot to untapped markets—after extracting substantial profits from American communities and leaving local governments to address the devastating and still growing damage the company caused—only serves to underscore that Purdue's actions have been knowing, intentional, and motivated by profits throughout this entire story.

3. Other Marketing Defendants Leapt at the Opioid Opportunity

132. Purdue created a market for the use of opioids for a range of common aches and pains by misrepresenting the risks and benefits of its opioids, but it was not alone. The other

²⁶ Letter from Members of Congress to Dr. Margaret Chan, Director-General, World Health Organization (May 3, 2017), <http://katherineclark.house.gov/cache/files/a577bd3c-29ec-4bb9-bdba-1ca71c784113/mundipharma-letter-signatures.pdf>.

Marketing Defendants—already manufacturers of prescription opioids—positioned themselves to take advantage of the opportunity Purdue created, developing both branded and generic opioids to compete with OxyContin, while, together with Purdue and each other, misrepresenting the safety and efficacy of their products. These misrepresentations are described in greater detail in Sections D below.

133. Endo, which already sold Percocet and Percodan, was the first to submit an application for a generic extended-release oxycodone to compete with OxyContin. At the same time, Endo sought FDA approval for another potent opioid, immediate-release and extended-release oxymorphone, branded as Opana and Opana ER. Oxymorphone, like OxyContin's active ingredient oxycodone, is not a new drug; it was first synthesized in Germany in 1914 and sold in the U.S. by Endo beginning in 1959 under the trade name Numorphan. But Numorphan tablets proved highly susceptible to abuse. Called "blues" after the light blue color of the 10 mg pills, Numorphan provoked, according to some users, a more euphoric high than heroin. As the National Institute on Drug Abuse observed in its 1974 report, "Drugs and Addict Lifestyle," Numorphan was extremely popular among addicts for its quick and sustained effect.²⁷ Endo withdrew oral Numorphan from the market in 1979.²⁸

134. Two decades later, however, as communities around the U.S. were first sounding the alarm about prescription opioids and Purdue executives were being called to testify before Congress about the risks of OxyContin, Endo essentially reached back into its inventory, dusted off a product it had previously shelved after widespread abuse, and pushed it into the marketplace with a new trade name, Opana.

²⁷ John Fauber & Kristina Fiore, *Abandoned Painkiller Makes a Comeback*, MedPage Today (May 10, 2015), <https://www.medpagetoday.com/psychiatry/addictions/51448>.

²⁸ *Id.*

135. The clinical trials submitted with Endo's first application for approval of Opana were insufficient to demonstrate efficacy, and some subjects in the trials overdosed and had to be revived with naloxone. Endo then submitted new "enriched enrollment" clinical trials, in which trial subjects who do not respond to the drug are excluded from the trial, and obtained approval. Endo began marketing Opana and Opana ER in 2006.

136. Like Numorphan, Opana ER was highly susceptible to abuse. On June 8, 2017, the FDA sought removal of Opana ER. In its press release, the FDA indicated that this is the first time the agency has taken steps to remove a currently marketed opioid pain medication from sale due to the public health consequences of abuse."²⁹ On July 6, 2017, Endo agreed to withdraw Opana ER from the market.³⁰

137. Janssen, which already marketed the Duragesic (fentanyl) patch for severe pain, also joined Purdue in pursuit of the broader chronic pain market. It sought to expand the use of Duragesic through, for example, advertisements proclaiming, "It's not just for end stage cancer anymore!"³¹ This claim earned Janssen a warning letter from the FDA, for representing that Duragesic was "more useful in a broader range of conditions or patients than has been demonstrated by substantial evidence."³²

²⁹ Press Release, U.S. Food & Drug Admin., FDA Requests Removal of Opana ER for Risks Related to Abuse (June 8, 2017), <https://www.fda.gov/NewsEvents/Newsroom/PressAnnouncements/ucm562401.htm>.

³⁰ *Endo Pulls Opioid as U.S. Seeks to Tackle Abuse Epidemic*, Reuters (July 6, 2017, 9:59am), <https://www.reuters.com/article/us-endo-intl-opana-idUSKBN19R2II>.

³¹ Letter from FDA to Janssen (March 30, 2000), at 2.

³² *Id.*

138. Janssen also developed a new opioid compound called tapentadol in 2009, marketed as Nucynta for the treatment of moderate to severe pain. Janssen launched the extended-release version, Nucynta ER, for treatment of chronic pain in 2011.

139. By adding additional opioids or expanding the use of their existing opioid products, the other Marketing Defendants took advantage of the market created by Purdue's aggressive promotion of OxyContin and reaped enormous profits. For example, Opana ER alone generated more than \$1 billion in revenue for Endo in 2010 and again in 2013. Janssen also passed the \$1 billion mark in sales of Duragesic in 2009.

C. Defendants' Conduct Created an Abatable Public Nuisance

140. As alleged throughout this Complaint, Defendants' conduct created a public health crisis and a public nuisance.

141. The public nuisance—i.e., the opioid epidemic—created, perpetuated, and maintained by Defendants can be abated and further recurrence of such harm and inconvenience can be abated by, inter alia, (a) educating prescribers (especially primary care physicians and the most prolific prescribers of opioids) and patients regarding the true risks and benefits of opioids, including the risk of addiction, in order to prevent the next cycle of addiction; (b) providing addiction treatment to patients who are already addicted to opioids; and (c) making naloxone widely available so that overdoses are less frequently fatal.

142. Defendants have the ability to act to abate the public nuisance, and the law recognizes that they are uniquely well positioned to do so. It is the manufacturer of a drug that has primary responsibility to assure the safety, efficacy, and appropriateness of a drug's labeling, marketing, and promotion. And, all companies in the supply chain of a controlled substance are primarily responsible for ensuring that such drugs are only distributed and dispensed to appropriate patients and not diverted. These responsibilities exist independent of any FDA or

DEA regulation, to ensure that their products and practices meet both federal and state consumer protection laws and regulations. As registered manufacturers and distributors of controlled substances, Defendants are placed in a position of special trust and responsibility and are uniquely positioned, based on their knowledge of prescribers and orders, to act as a first line of defense.

D. The Marketing Defendants' Multi-Pronged Scheme to Change Prescriber Habits and Public Perception and Increase Demand for Opioids

143. In order to accomplish the fundamental shift in perception that was key to successfully marketing their opioids, the Marketing Defendants designed and implemented a sophisticated and deceptive marketing strategy. Lacking legitimate scientific research to support their claims, the Marketing Defendants turned to the marketing techniques first pioneered by Arthur Sackler to create a series of misperceptions in the medical community and ultimately reverse the long-settled understanding of the relative risks and benefits of opioids.

144. The Marketing Defendants promoted, and profited from, their misrepresentations about the risks and benefits of opioids for chronic pain even though they knew that their marketing was false and misleading. The history of opioids, as well as research and clinical experience over the last 20 years, established that opioids were highly addictive and responsible for a long list of very serious adverse outcomes. The FDA and other regulators warned Marketing Defendants of these risks. The Marketing Defendants had access to scientific studies, detailed prescription data, and reports of adverse events, including reports of addiction, hospitalization, and deaths—all of which made clear the harms from long-term opioid use and that patients are suffering from addiction, overdoses, and death in alarming numbers. More recently, the FDA and CDC issued pronouncements based on existing medical evidence that conclusively expose the known falsity of these Defendants' misrepresentations.

145. The marketing scheme to increase opioid prescriptions centered around nine categories of misrepresentations, which are discussed in detail below. The Marketing Defendants disseminated these misrepresentations through various channels, including through advertising, sales representatives, purportedly independent organizations these defendants funded and controlled, “Front Groups,” so-called industry “Key Opinion Leaders,” and Continuing Medical Education (“CME”) programs discussed subsequently below.

1. The Marketing Defendants Promoted Multiple Falsehoods About Opioids

146. The Marketing Defendants’ misrepresentations fall into the following nine categories:

- a. The risk of addiction from chronic opioid therapy is low
- b. To the extent there is a risk of addiction, it can be easily identified and managed
- c. Signs of addictive behavior are “pseudoaddiction,” requiring more opioids
- d. Opioid withdrawal can be avoided by tapering
- e. Opioid doses can be increased without limit or greater risks
- f. Long-term opioid use improves functioning
- g. Alternative forms of pain relief pose greater risks than opioids
- h. OxyContin provides twelve hours of pain relief
- i. New formulations of certain opioids successfully deter abuse

147. Each of these propositions was false. The Marketing Defendants knew this, but they nonetheless set out to convince physicians, patients, and the public at large of the truth of each of these propositions in order to expand the market for their opioids.

148. The categories of misrepresentations are offered to organize the numerous statements the Marketing Defendants made and to explain their role in the overall marketing

effort, not as a checklist for assessing each Marketing Defendant's liability. While each Marketing Defendant deceptively promoted their opioids specifically, and, together with other Marketing Defendants, opioids generally, not every Marketing Defendant propagated (or needed to propagate) each misrepresentation. Each Marketing Defendant's conduct, and each misrepresentation, contributed to an overall narrative that aimed to—and did—mislead doctors, patients, and payors about the risk and benefits of opioids. While this Complaint endeavors to document examples of each Marketing Defendant's misrepresentations and the manner in which they were disseminated, they are just that—examples. The Complaint is not, especially prior to discovery, an exhaustive catalog of the nature and manner of each deceptive statement by each Marketing Defendant.

a. Falsehood #1: The risk of addiction from chronic opioid therapy is low

149. Central to the Marketing Defendants' promotional scheme was the misrepresentation that opioids are rarely addictive when taken for chronic pain. Through their marketing efforts, the Marketing Defendants advanced the idea that the risk of addiction is low when opioids are taken as prescribed by "legitimate" pain patients. That, in turn, directly led to the expected and intended result that doctors prescribed more opioids to more patients—thereby enriching the Marketing Defendants and substantially contributing to the opioid epidemic.

150. Each of the Marketing Defendants claimed that the potential for addiction from its opioids was relatively small or non-existent, even though there was no scientific evidence to support those claims. None of them have acknowledged, retracted, or corrected their false statements.

151. In fact, studies have shown that a substantial percentage of long-term users of opioids experience addiction. Addiction can result from the use of any opioid, "even at

recommended dose,”³³ and the risk substantially increases with more than three months of use.³⁴ As the CDC Guideline states, “[o]pioid pain medication use presents serious risks, including overdose and opioid use disorder” (a diagnostic term for addiction).³⁵

i. Purdue’s misrepresentations regarding addiction risk

152. When it launched OxyContin, Purdue knew it would need data to overcome decades of wariness regarding opioid use. It needed some sort of research to back up its messaging. But Purdue had not conducted any studies about abuse potential or addiction risk as part of its application for FDA approval for OxyContin. Purdue (and, later, the other Defendants) found this “research” in the form of a one-paragraph letter to the editor published in the *New England Journal of Medicine* (NEJM) in 1980.

153. This letter, by Dr. Hershel Jick and Jane Porter, declared the incidence of addiction “rare” for patients treated with opioids.³⁶ They had analyzed a database of hospitalized patients who were given opioids in a controlled setting to ease suffering from acute pain. Porter and Jick considered a patient not addicted if there was no sign of addiction noted in patients’ records.

³³ *FDA Announces Safety Labeling Changes and Postmarket Study Requirements For Extended-Release and Long-Acting Opioid Analgesics*, FDA (Sept. 10, 2013); see also [Press Release, U.S. Food & Drug Admin., FDA Announces Enhanced Warnings For Immediate-Release Opioid Pain Medications Related To Risks Of Misuse, Abuse, Addiction, Overdose And Death](#), (Mar. 22, 2016), <https://www.fda.gov/NewsEvents/Newsroom/PressAnnouncements/ucm491739.htm>.

³⁴ [Deborah Dowell, M.D. et al., CDC Guideline for Prescribing Opioids for Chronic Pain – United States 2016](#), 65(1) *Morbidity & Mortality Wkly. Rep.* 1, 21 (Mar. 18, 2016) (hereinafter “*CDC Guideline*”).

³⁵ *Id.* at 2.

³⁶ Jane Porter & Herschel Jick, MD, *Addiction Rare in Patients Treated with Narcotics*, 302(2) *New Engl. J. Med.* 123 (Jan. 10, 1980), <http://www.nejm.org/doi/pdf/10.1056/NEJM198001103020221>.

patients who are treated by doctors *is much less than 1%*.”³⁹ Purdue trained its sales representatives to tell prescribers that fewer than 1% of patients who took OxyContin became addicted. (In 1999, a Purdue-funded study of patients who used OxyContin for headaches found that the addiction rate was thirteen per cent.)”⁴⁰

157. Other Marketing Defendants relied on and disseminated the same distorted messaging. The enormous impact of Marketing Defendants’ misleading amplification of this letter was well documented in another letter published in the NEJM on June 1, 2017, describing the way the one-paragraph 1980 letter had been irresponsibly cited and in some cases “grossly misrepresented.” In particular, the authors of this letter explained:

[W]e found that a five-sentence letter published in the *Journal* in 1980 was heavily and uncritically cited as evidence that addiction was rare with long-term opioid therapy. We believe that this citation pattern contributed to the North American opioid crisis by helping to shape a narrative that allayed prescribers’ concerns about the risk of addiction associated with long-term opioid therapy . . .⁴¹

158. “It’s difficult to overstate the role of this letter,” said Dr. David Juurlink of the University of Toronto, who led the analysis. “It was the key bit of literature that helped the opiate manufacturers convince front-line doctors that addiction is not a concern.”⁴²

³⁹ Our Amazing World, *Purdue Pharma OxyContin Commercial*, [Youtube \(Sept. 22, 2016\), https://www.youtube.com/watch?v=Er78Dj5hyeI](https://www.youtube.com/watch?v=Er78Dj5hyeI).

159. Alongside its use of the Porter and Jick letter, Purdue also crafted its own materials and spread its deceptive message through numerous additional channels. In its 1996 press release announcing the release of OxyContin, for example, Purdue declared, “The fear of addiction is exaggerated.”⁴³

160. At a hearing before the House of Representatives’ Subcommittee on Oversight and Investigations of the Committee on Energy and Commerce in August 2001, Purdue emphasized “legitimate” treatment, dismissing cases of overdose and death as something that would not befall “legitimate” patients: “Virtually all of these reports involve people who are abusing the medication, not patients with legitimate medical needs under the treatment of a healthcare professional.”⁴⁴

161. Purdue spun this baseless “legitimate use” distinction out even further in a patient brochure about OxyContin, called “A Guide to Your New Pain Medicine and How to Become a Partner Against Pain.” In response to the question: “Aren’t opioid pain medications like OxyContin Tablets ‘addicting’?”, Purdue claimed that there was no need to worry about addiction if taking opioids for legitimate, “medical” purposes:

Drug addiction means using a drug to get “high” rather than to relieve pain. You are taking opioid pain medication for medical

⁴³ Press Release, Purdue Pharma L.P., , *New Hope for Millions of Americans Suffering from Persistent Pain: Long-Acting OxyContin Tablets Now Available to Relieve Pain* (May 31, 1996, 3:47pm), <http://documents.latimes.com/oxycontin-press-release-1996/>.

⁴⁴ *Oxycontin: Its Use and Abuse: Hearing Before the House Subcomm. on Oversight and Investigations of the Comm. on Energy and Commerce*, 107th Cong. 1 (Aug. 28, 2001) (Statement of Michael Friedman, Executive Vice President, Chief Operating Officer, Purdue Pharma, L.P.), <https://www.gpo.gov/fdsys/pkg/CHRG-107hhrg75754/html/CHRG-107hhrg75754.htm>.

purposes. The medical purposes are clear and the effects are beneficial, not harmful.⁴⁵

162. Sales representatives marketed OxyContin as a product “to start with and to stay with.”⁴⁶ Sales representatives also received training in overcoming doctors’ concerns about addiction with talking points they knew to be untrue about the drug’s abuse potential. One of Purdue’s early training memos compared doctor visits to “firing at a target,” declaring that “[a]s you prepare to fire your ‘message,’ you need to know where to aim and what you want to hit!”⁴⁷ According to the memo, the target is physician resistance based on concern about addiction: “The physician wants pain relief for these patients without addicting them to an opioid.”⁴⁸

163. Purdue, through its unbranded website *Partners Against Pain*, stated the following: “Current Myth: Opioid addiction (psychological dependence) is an important clinical problem in patients with moderate to severe pain treated with opioids. Fact: Fears about psychological dependence are exaggerated when treating appropriate pain patients with opioids.” “Addiction risk also appears to be low when opioids are dosed properly for chronic, noncancer pain.”⁴⁹

164. Former sales representative Steven May, who worked for Purdue from 1999 to 2005, explained to a journalist how he and his coworkers were trained to overcome doctors’ objections to prescribing opioids. The most common objection he heard about prescribing

⁴⁵ *Partners Against Pain* consists of both a website, styled as an “advocacy community” for better pain care, and a set of medical education resources distributed to prescribers by sales representatives, such as the brochure quoted here. It has existed since at least the early 2000s and has been a vehicle for Purdue to downplay the risks of addiction from long-term opioid use.

⁴⁶ Keefe, *Empire of Pain*, *supra* note 40.

⁴⁷ Meier, *supra* note 18, at 102.

⁴⁹ PURCHI 620694-723, at 700.

OxyContin was that “it’s just too addictive.”⁵⁰ May and his coworkers were trained to “refocus” doctors on “legitimate” pain patients, and to represent that “legitimate” patients would not become addicted. In addition, they were trained to say that the 12-hour dosing made the extended-release opioids less “habit-forming” than painkillers that need to be taken every four hours.

165. According to interviews with prescribers and former Purdue sales representatives, Purdue has continued to distort or omit the risk of addiction while failing to correct its earlier misrepresentations, leaving many doctors with the false impression that pain patients will only rarely become addicted to opioids.

166. With regard to addiction, Purdue’s label for OxyContin has not sufficiently disclosed the true risks to, and experience of, its patients. Until 2014, the OxyContin label stated in a black-box warning that opioids have “abuse potential” and that the “risk of abuse is increased in patients with a personal or family history of substance abuse.”

167. However, the FDA made clear to Purdue as early as 2001 that the disclosures in its OxyContin label were insufficient. [REDACTED]

ii. Endo's misrepresentations regarding addiction risk

172. Endo also falsely represented that addiction is rare in patients who are prescribed opioids.

173. Until April 2012, Endo's website for Opana, www.opana.com, stated that "[m]ost healthcare providers who treat patients with pain agree that patients treated with prolonged opioid medicines usually do not become addicted."

174. Upon information and belief, Endo improperly instructed its sales representatives to diminish and distort the risk of addiction associated with Opana ER. Endo's training materials for its sales representatives in 2011 also prompted sales representatives to answer "true" to the statement that addiction to opioids is not common.⁵¹

175. One of the Front Groups with which Endo worked most closely was the American Pain Foundation ("APF"), described more fully below. Endo provided substantial assistance to,

⁵¹ ENDO-CHI_LIT-000059465-573, at 568.

and exercised editorial control, over the deceptive and misleading messages that APF conveyed through its National Initiative on Pain Control (“NIPC”)⁵² and its website www.Painknowledge.com, which claimed that “[p]eople who take opioids as prescribed usually do not become addicted.”

176. Another Endo website, www.PainAction.com, stated: “Did you know? Most chronic pain patients do not become addicted to the opioid medications that are prescribed for them.”

177. A brochure available on www.Painknowledge.com titled “*Pain: Opioid Facts*,” Endo-sponsored NIPC stated that “people who have no history of drug abuse, including tobacco, and use their opioid medication as directed will probably not become addicted.” In numerous patient education pamphlets, Endo repeated this deceptive message.

178. In a patient education pamphlet titled “*Understanding Your Pain: Taking Oral Opioid Analgesics*,” Endo answers the hypothetical patient question—“What should I know about opioids and addiction?”—by focusing on explaining what addiction is (“a chronic brain disease”) and is not (“Taking opioids for pain relief”). The pamphlet goes on to explain that “[a]ddicts take opioids for other reasons, such as unbearable emotional problems. Taking opioids as prescribed for pain relief is not addiction.” This publication is still available online.

179. An Endo publication, *Living with Someone with Chronic Pain*, stated, “Most health care providers who treat people with pain agree that most people do not develop an

⁵² Endo was one of the APF’s biggest financial supporters, providing more than half of the \$10 million APF received from opioid manufacturers during its lifespan. Endo was the sole funder of NIPC and selected APF to manage NIPC. Internal Endo documents indicate that Endo was responsible for NIPC curriculum development, web posting, and workshops, developed and reviewed NIPC content, and took a substantial role in distributing NIPC and APF materials. Endo projected that it would be able to reach tens of thousands of prescribers nationwide through the distribution of NIPC materials.

185. Janssen's website for Duragesic included a section addressing "Your Right to Pain Relief" and a hypothetical patient's fear that "I'm afraid I'll become a drug addict." The website's response: "Addiction is relatively rare when patients take opioids appropriately."

iv. Cephalon's misrepresentations regarding addiction risk.

190. Cephalon sponsored and facilitated the development of a guidebook, *Opioid Medications and REMS: A Patient's Guide*, which included claims that "patients without a history of abuse or a family history of abuse do not commonly become addicted to opioids." Similarly, Cephalon sponsored APF's *Treatment Options: A Guide for People Living with Pain* (2007), which taught that addiction is rare and limited to extreme cases of unauthorized dose escalations, obtaining opioids from multiple sources, or theft.

191. For example, a 2003 Cephalon-sponsored CME presentation titled *Pharmacologic Management of Breakthrough or Incident Pain*, posted on Medscape in February 2003, teaches:

[C]hronic pain is often undertreated, particularly in the noncancer patient population. . . . The continued stigmatization of opioids and their prescription, coupled with often unfounded and self-imposed physician fear of dealing with the highly regulated distribution system for opioid analgesics, remains a barrier to effective pain management and must be addressed. Clinicians intimately involved with the treatment of patients with chronic pain recognize that the majority of suffering patients lack interest in substance abuse. In fact, patient fears of developing substance abuse behaviors such as addiction often lead to undertreatment of pain. The concern about patients with chronic pain becoming addicted to opioids during long-term opioid therapy may stem from confusion between physical dependence (tolerance) and psychological dependence (addiction) that manifests as drug abuse.⁶¹

v. Actavis's misrepresentations regarding addiction risk.

193. Through its “Learn More about customized pain control with Kadian,” material, Actavis claimed that it is possible to become addicted to morphine-based drugs like Kadian, but that it is “less likely” to happen in those who “have never had an addiction problem.” The piece goes on to advise that a need for a “dose adjustment” is the result of tolerance, and “not addiction.”⁶³

194. Training for Actavis sales representatives deceptively minimizes the risk of addiction by: (i) attributing addiction to “predisposing factors” like family history of addiction or psychiatric disorders; (ii) repeatedly emphasizing the difference between substance dependence and substance abuse; and (iii) using the term pseudoaddiction, which, as described below, dismisses evidence of addiction as the undertreatment of pain and, dangerously, counsels doctors to respond to its signs with more opioids.⁶⁴

195. Actavis conducted a market study on takeaways from prescribers’ interactions with Kadian sales representatives. The doctors had a strong recollection of the sales representatives’ discussion of the low-abuse potential.⁶⁵ Actavis’ sales representatives’ misstatements on the low-abuse potential was considered an important factor to doctors, and was most likely repeated and reinforced to their patients. Additionally, doctors reviewed visual aids

⁶² TEVA_CHI_00015258-355, at 299.

⁶³ ACTAVIS0006823-830, at 826.

⁶⁴ ACTAVIS0205095-286, at 101.

⁶⁵ ACTAVIS0584540-609, at 542.

that the Kadian sales representatives use during the visits, and Actavis noted that doctors associate Kadian with less abuse and no highs, in comparison to other opioids.⁶⁶ Numerous marketing surveys of doctors in 2010 and 2012, for example, confirmed Actavis's messaging about Kadian's purported low addiction potential, and that it had less abuse potential than other similar opioids.⁶⁷

196. A guide for prescribers under Actavis's copyright deceptively represents that Kadian is more difficult to abuse and less addictive than other opioids. The guide includes the following statements: 1) "unique pharmaceutical formulation of KADIAN may offer some protection from extraction of morphine sulfate for intravenous use by illicit users," and 2) KADIAN may be less likely to be abused by health care providers and illicit users" because of "Slow onset of action," "Lower peak plasma morphine levels than equivalent doses of other formulations of morphine," "Long duration of action," and "Minimal fluctuations in peak to trough plasma levels of morphine at steady state."⁶⁸ The guide is copyrighted by Actavis in 2007, before Actavis officially purchased Kadian from Alpharma.⁶⁹ These statements convey both that (a) Kadian does not cause euphoria and therefore is less addictive and that (b) Kadian is less prone to tampering and abuse, even though Kadian was not approved by the FDA as abuse deterrent, and, upon information and belief, Actavis had no studies to suggest it was.

vi. Mallinckrodt's misrepresentations regarding addiction risk

197. As described below, Mallinckrodt promoted its branded opioids Exalgo and Xartemis XR, and opioids generally, in a campaign that consistently mischaracterized the risk of

⁶⁶ ACTAVIS0584610-649, at 617.

⁶⁷ ACTAVIS0361609-652; *see also* ACTAVIS0192847-78, at 49.

⁶⁸ ACTAVIS0947868-72, at 68-69.

⁶⁹ *Id.*

addiction. Mallinckrodt did so through its website and sales force, as well as through unbranded communications distributed through the “C.A.R.E.S. Alliance” it created and led.

198. Mallinckrodt in 2010 created the C.A.R.E.S. (Collaborating and Acting Responsibly to Ensure Safety) Alliance, which it describes as “a coalition of national patient safety, provider and drug diversion organizations that are focused on reducing opioid pain medication abuse and increasing responsible prescribing habits.” The “C.A.R.E.S. Alliance” itself is a service mark of Mallinckrodt LLC (and was previously a service mark of Mallinckrodt, Inc.) copyrighted and registered as a trademark by Covidien, its former parent company. Materials distributed by the C.A.R.E.S. Alliance, however, include unbranded publications that do not disclose a link to Mallinckrodt.

199. By 2012, Mallinckrodt, through the C.A.R.E.S. Alliance, was promoting a book titled *Defeat Chronic Pain Now!* This book is still available online. The false claims and misrepresentations in this book include the following statements:

- “Only rarely does opioid medication cause a true addiction when prescribed appropriately to a chronic pain patient who does not have a prior history of addiction.”
- “It is currently recommended that every chronic pain patient suffering from moderate to severe pain be viewed as a potential candidate for opioid therapy.”
- “When chronic pain patients take opioids to treat their pain, they rarely develop a true addiction and drug craving.”
- “Only a minority of chronic pain patients who are taking long-term opioids develop tolerance.”
- “**The bottom line:** Only rarely does opioid medication cause a true addiction when prescribed appropriately to a chronic pain patient who does not have a prior history of addiction.”
- “Here are the facts. It is very uncommon for a person with chronic pain to become ‘addicted’ to narcotics IF (1) he

doesn't have a prior history of any addiction and (2) he only takes the medication to treat pain.”

- “Studies have shown that many chronic pain patients can experience significant pain relief with tolerable side effects from opioid narcotic medication when taken daily and no addiction.”

200. In a 2013 *Mallinckrodt Pharmaceuticals Policy Statement Regarding the Treatment of Pain and Control of Opioid Abuse*, which is still available online, Mallinckrodt stated that, “[s]adly, even today, pain frequently remains undiagnosed and either untreated or undertreated” and cites to a report that concludes that “the majority of people with pain use their prescription drugs properly, are not a source of misuse, and should not be stigmatized or denied access because of the misdeeds or carelessness of others.”

201. The Marketing Defendants’ suggestions that the opioid epidemic is the result of bad patients who manipulate doctors to obtain opioids illicitly helped further their marketing scheme, but is at odds with the facts. While there are certainly patients who unlawfully obtain opioids, they are a small minority. For example, patients who “doctor-shop”—i.e., visit multiple prescribers to obtain opioid prescriptions—are responsible for roughly 2% of opioid prescriptions. The epidemic of opioid addiction and abuse is overwhelmingly a problem of false marketing (and unconstrained distribution) of the drugs, not problem patients.

b. Falsehood #2: To the extent there is a risk of addiction, it can be easily identified and managed

202. While continuing to maintain that most patients can safely take opioids long-term for chronic pain without becoming addicted, the Marketing Defendants assert that to the extent that *some* patients are at risk of opioid addiction, doctors can effectively identify and manage that risk by using screening tools or questionnaires. In materials they produced, sponsored, or controlled, Defendants instructed patients and prescribers that screening tools can identify

patients predisposed to addiction, thus making doctors feel more comfortable prescribing opioids to their patients and patients more comfortable starting opioid therapy for chronic pain. These tools, they say, identify those with higher addiction risks (stemming from personal or family histories of substance use, mental illness, trauma, or abuse) so that doctors can then more closely monitor those patients.

203. Purdue shared with prescribers its *Partners Against Pain* “Pain Management Kit,” which contains several screening tools and catalogues of Purdue materials, including these same screening tools. Janssen, on its website www.PrescribeResponsibly.com, states that the risk of opioid addiction “can usually be managed” through tools such as opioid agreements between patients and doctors.⁷⁰ The website, which directly provides screening tools to prescribers for risk assessments,⁷¹ includes a “[f]our question screener” to purportedly help physicians identify and address possible opioid misuse.⁷²

204. Purdue and Cephalon sponsored the APF’s *Treatment Options: A Guide for People Living with Pain* (2007), which also falsely reassured patients that opioid agreements between doctors and patients can “ensure that you take the opioid as prescribed.”

205. Purdue sponsored a 2011 webinar entitled *Managing Patient’s Opioid Use: Balancing the Need and Risk*, taught by Dr. Lynn Webster, a KOL discussed further below. This

⁷⁰ Howard A. Heit, MD, FACP, FASAM and Douglas L. Gourlay, MD, MSc, FRCPC, FASAM, *What a Prescriber Should Know Before Writing the First Prescription*, Prescribe Responsibly, <http://www.prescriberesponsibly.com/articles/before-prescribing-opioids#> (last modified July 2, 2015).

⁷¹ *Risk Assessment Resources*, Prescribe Responsibly, <http://www.prescriberesponsibly.com/risk-assessment-resources> (last modified July 2, 2015).

⁷² *Id.*

publication misleadingly taught prescribers that screening tools, urine tests, and patient agreements have the effect of preventing “overuse of prescriptions” and “overdose deaths.”

206. Purdue sponsored a 2011 CME program titled *Managing Patient’s Opioid Use: Balancing the Need and Risk*. This presentation deceptively instructed prescribers that screening tools, patient agreements, and urine tests prevented “overuse of prescriptions” and “overdose deaths.”

207. Purdue also funded a 2012 CME program called *Chronic Pain Management and Opioid Use: Easing Fears, Managing Risks, and Improving Outcomes*. The presentation deceptively instructed doctors that, through the use of screening tools, more frequent refills, and other techniques, even high-risk patients showing signs of addiction could be treated with opioids.

208. Endo paid for a 2007 supplement available for continuing education credit in the *Journal of Family Practice* written by a doctor who became a member of Endo’s speakers’ bureau in 2010. This publication, entitled *Pain Management Dilemmas in Primary Care: Use of Opioids*, recommended screening patients using tools like the *Opioid Risk Tool* created by Dr. Webster and linked to Janssen or the *Screening and Opioid Assessment for Patients with Pain*, and also taught that patients at high risk of addiction could safely receive chronic opioid therapy using a “maximally structured approach” involving toxicology screens and pill counts. The *Opioid Risk Tool* was linked to by Endo-supported websites, as well.

209. There are three fundamental flaws in the Marketing Defendants’ representations that doctors can consistently identify and manage the risk of addiction. First, there is no reliable scientific evidence that doctors can depend on the screening tools currently available to materially limit the risk of addiction. Second, there is no reliable scientific evidence that high-

risk patients identified through screening can take opioids long-term without triggering addiction, even with enhanced monitoring. Third, there is no reliable scientific evidence that patients who are not identified through such screening can take opioids long-term without significant danger of addiction.

c. Falsehood #3: Signs of addictive behavior are “pseudoaddiction,” requiring more opioids

210. The Marketing Defendants instructed patients and prescribers that signs of addiction are actually indications of untreated pain, such that the appropriate response is to prescribe even more opioids. Dr. David Haddox, who later became a Senior Medical Director for Purdue, published a study in 1989 coining the term “pseudoaddiction,” which he characterized as “the iatrogenic syndrome of abnormal behavior developing as a direct consequence of inadequate pain management.”⁷³ In other words, people on prescription opioids who exhibited classic signs of addiction—for example, asking for more and higher doses of opioids, self-escalating their doses, or claiming to have lost prescriptions in order to get more opioids—were not addicted, but rather simply suffering from undertreatment of their pain.

211. In the materials and outreach they produced, sponsored, or controlled, Defendants made each of these misrepresentations and omissions, and have never acknowledged, retracted, or corrected them.

212. Cephalon, Endo, and Purdue sponsored the Federation of State Medical Boards’ (“FSMB”) *Responsible Opioid Prescribing* (2007), written by Dr. Fishman and discussed in more detail below, which taught that behaviors such as “requesting drugs by name,” “demanding

⁷³ David E. Weissman & J. David Haddox, *Opioid Pseudoaddiction—an Iatrogenic Syndrome*, 36(3) *Pain* 363, 363-66 (Mar. 1989), <https://www.ncbi.nlm.nih.gov/pubmed/2710565>. (“Iatrogenic” describes a condition induced by medical treatment).

or manipulative behavior,” seeing more than one doctor to obtain opioids, and hoarding, which are signs of genuine addiction, are all really signs of “pseudoaddiction.”

213. Purdue posted an unbranded pamphlet entitled *Clinical Issues in Opioid Prescribing* on its unbranded website, www.PartnersAgainstPain.com, in 2005, and circulated this pamphlet through at least 2007 and on its website through at least 2013. The pamphlet listed conduct including “illicit drug use and deception” that it claimed was not evidence of true addiction but rather “pseudoaddiction” caused by untreated pain.

214. According to documents provided by a former Purdue detailer, sales representatives were trained and tested on the meaning of pseudoaddiction, from which it can be inferred that sales representatives were directed to, and did, describe pseudoaddiction to prescribers. Purdue’s Pain Management Kit is another example of publication used by Purdue’s sales force that endorses pseudoaddiction by claiming that “pain-relief seeking behavior can be mistaken for drug-seeking behavior.” Upon information and belief, the kit was in use from roughly 2011 through at least June 2016.

215. Similarly, internal documents show that Endo trained its sales representatives to promote the concept of pseudoaddiction. A training module taught sales representatives that addiction and pseudoaddiction were commonly confused. The module went on to state that: “The physician can differentiate addiction from pseudoaddiction by speaking to the patient about his/her pain and increasing the patient’s opioid dose to increase pain relief.”⁷⁴

216. Endo also sponsored a NIPC CME program in 2009 titled *Chronic Opioid Therapy: Understanding Risk While Maximizing Analgesia*, which promoted pseudoaddiction

⁷⁴ ENDO-CHI_LIT-000053284-335, at 299.

and listed “[d]ifferentiation among states of physical dependence, tolerance, pseudoaddiction, and addiction” as an element to be considered in awarding grants to CME providers.⁷⁵

217. Upon information and belief, Endo itself has repudiated the concept of pseudoaddiction. In finding that “[t]he pseudoaddiction concept has never been empirically validated and in fact has been abandoned by some of its proponents,” the New York Attorney General, in a 2016 settlement with Endo, reported that “Endo’s Vice President for Pharmacovigilance and Risk Management testified to [the NY AG] that he was not aware of any research validating the ‘pseudoaddiction’ concept” and acknowledged the difficulty in distinguishing “between addiction and ‘pseudoaddiction.’”⁷⁶ Endo thereafter agreed not to “use the term ‘pseudoaddiction’ in any training or marketing” in New York.

218. Janssen sponsored, funded, and edited a website called *Let’s Talk Pain*, which in 2009 stated “pseudoaddiction . . . refers to patient behaviors that may occur when *pain is undertreated* Pseudoaddiction is different from true addiction because such behaviors can be resolved with effective pain management.” This website was accessible online until at least May 2012.

219. Janssen also currently runs a website, www.Prescriberesponsibly.com, which claims that concerns about opioid addiction are “overestimated,” and describes pseudoaddiction as “a syndrome that causes patients to seek additional medications due to inadequate

⁷⁵ ENDO-CHI_LIT-00179117-22, at 19.

⁷⁶ Attorney General of the State of New York, In the Matter of Endo Health Solutions Inc. & Endo Pharmaceuticals Inc., Assurance No.:15-228, Assurance of Discontinuance Under Executive Law Section 63. Subdivision 15 at 7.

pharmacotherapy being prescribed. Typically when the pain is treated appropriately the inappropriate behavior ceases.”⁷⁷

220. The CDC Guideline nowhere recommends attempting to provide more opioids to patients exhibiting symptoms of addiction. Dr. Webster, a KOL discussed below, admitted that pseudoaddiction “is already something we are debunking as a concept” and became “too much of an excuse to give patients more medication. It led us down a path that caused harm.”

d. Falsehood #4: Opioid withdrawal can be avoided by tapering

221. In an effort to underplay the risk and impact of addiction, the Marketing Defendants falsely claimed that, while patients become physically dependent on opioids, physical dependence is not the same as addiction and can be easily addressed, if and when pain relief is no longer desired, by gradually tapering patients’ dose to avoid withdrawal. Defendants failed to disclose the extremely difficult and painful symptoms that patients can experience upon ceasing opioid treatment—adverse effects that also make it less likely that patients will be able to stop using the drugs. Defendants also failed to disclose how difficult it is for patients to stop using opioids after they have used them for prolonged periods.

222. A non-credit educational program sponsored by Endo, *Persistent Pain in the Older Adult*, claimed that withdrawal symptoms, which make it difficult for patients to stop using opioids, could be avoided by simply tapering a patient’s opioid dose over ten days. However, this claim is at odds with the experience of patients addicted to opioids. Most patients who have been taking opioids regularly will, upon stopping treatment, experience withdrawal, characterized by intense physical and psychological effects, including anxiety, nausea,

⁷⁷ Heit & Gourlay, *supra* note 71.

headaches, and delirium, among others. This painful and arduous struggle to terminate use can leave many patients unwilling or unable to give up opioids and heightens the risk of addiction.

223. Purdue sponsored the American Pain Foundation's ("APF") *A Policymaker's Guide to Understanding Pain & Its Management*, which taught that "Symptoms of physical dependence can often be ameliorated by gradually decreasing the dose of medication during discontinuation," but the guide did not disclose the significant hardships that often accompany cessation of use.

224. To this day, the Marketing Defendants have not corrected or retracted their misrepresentations regarding tapering as a solution to opioid withdrawal.

e. Falsehood #5: Opioid doses can be increased without limit or greater risks

225. In materials they produced, sponsored or controlled, Marketing Defendants instructed prescribers that they could safely increase a patient's dose to achieve pain relief. Each of the Marketing Defendants' claims was deceptive in that it omitted warnings of increased adverse effects that occur at higher doses, effects confirmed by scientific evidence.

226. These misrepresentations were integral to the Marketing Defendants' promotion of prescription opioids. As discussed above, patients develop a tolerance to opioids' analgesic effects, so that achieving long-term pain relief requires constantly increasing the dose.

227. In a 1996 sales memo regarding OxyContin, for example, a regional manager for Purdue instructed sales representatives to inform physicians that there is "no[] upward limit" for dosing and ask "if there are any reservations in using a dose of 240mg-320mg of OxyContin."⁷⁸

⁷⁸ Letter from Windell Fisher, Purdue Regional Manager, to B. Gergely, Purdue Employee (Nov. 7, 1996), <http://documents.latimes.com/sales-manager-on12-hour-dosing-1996/> (last updated May 5, 2016) (hereinafter "Letter from Fisher").

MME is equal to just 33 mg of oxycodone. The recommendation of 320 mg every twelve hours is ten times that.

230. In its 2010 Risk Evaluation and Mitigation Strategy (“REMS”) for OxyContin, however, Purdue does not address the increased risk of respiratory depression and death from increasing dose, and instead advises prescribers that “dose adjustments may be made every 1-2 days”; “it is most appropriate to increase the q12h dose”; the “total daily dose can usually be increased by 25% to 50%”; and if “significant adverse reactions occur, treat them aggressively until they are under control, then resume upward titration.”⁷⁹

231. Endo sponsored a website, www.Painknowledge.com, which claimed that opioids may be increased until “you are on the right dose of medication for your pain,” at which point further dose increases would not be required.

232. Endo also published on its website a patient education pamphlet entitled *Understanding Your Pain: Taking Oral Opioid Analgesics*. In Q&A format, it asked, “If I take the opioid now, will it work later when I really need it?” The response is, “The dose can be increased . . . You won’t ‘run out’ of pain relief.”

233. Purdue and Cephalon sponsored APF’s *Treatment Options: A Guide for People Living with Pain* (2007), which taught patients that opioids have “no ceiling dose” and therefore are safer than NSAIDs.

234. [REDACTED]

[REDACTED]

⁷⁹ Purdue Pharma L.P., *OxyContin Risk Evaluation and Mitigation Strategy*, <https://web.archive.org/web/20170215190303/https://www.fda.gov/downloads/Drugs/DrugSafety/PostmarketDrugSafetyInformationforPatientsandProviders/UCM220990.pdf> (last modified Nov. 2010).

235. [REDACTED]

236. Marketing Defendants were aware of the greater dangers high-dose opioids posed.

In 2013, the FDA acknowledged “that the available data do suggest a relationship between increasing opioid dose and risk of certain adverse events” and that studies “appear to credibly suggest a positive association between high-dose opioid use and the risk of overdose and/or overdose mortality.” For example, a study of patient data from the Veterans Health Administration published in 2011 found that higher maximum prescribed daily opioid doses were associated with a higher risk of opioid overdose deaths.⁸²

f. Falsehood #6: Long-term opioid use improves functioning

237. Despite the lack of evidence of improved function and the existence of evidence to the contrary, the Marketing Defendants consistently promoted opioids as capable of improving patients’ function and quality of life because they viewed these claims as a critical part of their

⁸⁰ JAN00019608-670.

⁸¹ *Id.* At JAN00019654.

⁸² Amy S. B. Bohnert, Ph.D. et al., *Association Between Opioid Prescribing Patterns and Opioid Overdose-Related Deaths*, 305(13) J. of Am. Med. Assoc. 1315, 1315-1321 (Apr. 6, 2011), <https://jamanetwork.com/journals/jama/fullarticle/896182>.

marketing strategies. In recalibrating the risk-benefit analysis for opioids, increasing the perceived benefits of treatment was necessary to overcome its risks.

238. Janssen, for example, promoted Duragesic as improving patients' functioning and work productivity through an ad campaign that included the following statements: "[w]ork, uninterrupted," "[l]ife, uninterrupted," "[g]ame, uninterrupted," "[c]hronic pain relief that supports functionality," and "[i]mprove[s] . . . physical and social functioning."

239. Purdue noted the need to compete with this messaging, despite the lack of data supporting improvement in quality of life with OxyContin treatment:

Janssen has been stressing decreased side effects, especially constipation, as well as patient quality of life, as supported by patient rating compared to sustained release morphine... We do not have such data to support OxyContin promotion. . . . In addition, Janssen has been using the "life uninterrupted" message in promotion of Duragesic for non-cancer pain, stressing that Duragesic "helps patients think less about their pain." This is a competitive advantage based on our inability to make any quality of life claims.⁸³

240. Despite its acknowledgment that "[w]e do not have such data to support OxyContin promotion," Purdue ran a full-page ad for OxyContin in the Journal of the American Medical Association, proclaiming, "There Can Be Life With Relief," and showing a man happily fly-fishing alongside his grandson, implying that OxyContin would help users' function. This ad earned a warning letter from the FDA, which admonished, "It is particularly disturbing that your November ad would tout 'Life With Relief' yet fail to warn that patients can die from taking OxyContin."⁸⁴

⁸³ Meier, *supra* note 18, at 281.

⁸⁴ Chris Adams, *FDA Orders Purdue Pharma To Pull Its OxyContin Ads*, Wall St. J. (Jan. 23, 2003, 12:01am), <https://www.wsj.com/articles/SB1043259665976915824>.

241. Purdue sponsored APF's *A Policymaker's Guide to Understanding Pain & Its Management*, which claimed that "multiple clinical studies" have shown that opioids are effective in improving daily function, psychological health, and health-related quality of life for chronic pain patients. But the article cited as support for this in fact stated the contrary, noting the absence of long-term studies and concluding, "[f]or functional outcomes, the other analgesics were significantly more effective than were opioids."

242. A series of medical journal advertisements for OxyContin in 2012 presented "Pain Vignettes"—case studies featuring patients with pain conditions persisting over several months—that implied functional improvement. For example, one advertisement described a "writer with osteoarthritis of the hands" and implied that OxyContin would help him work more effectively.

243. Similarly, since at least May of 2011, Endo has distributed and made available on its website, www.opana.com, a pamphlet promoting Opana ER with photographs depicting patients with physically demanding jobs like those of a construction worker or chef, misleadingly implying that the drug would provide long-term pain relief and functional improvement.

244. As noted above, Janssen sponsored and edited a patient education guide entitled *Finding Relief: Pain Management for Older Adults* (2009), which states as "a fact" that "opioids may make it easier for people to live normally." This guide features a man playing golf on the cover and lists examples of expected functional improvement from opioids, like sleeping through the night, returning to work, recreation, sex, walking, and climbing stairs. It assures patients that, "[u]sed properly, opioid medications can make it possible for people with chronic pain to 'return to normal.'" Similarly, *Responsible Opioid Prescribing* (2007), sponsored and distributed by

Teva, Endo, and Purdue, taught that relief of pain by opioids, by itself, improved patients' function. The book remains for sale online.

245. In addition, Janssen's *Let's Talk Pain* website featured a video interview, which was edited by Janssen personnel, claiming that opioids were what allowed a patient to "continue to function," falsely implying that her experience would be representative.

246. The APF's *Treatment Options: A Guide for People Living with Pain* (2007), sponsored by Purdue and Cephalon, counseled patients that opioids "give [pain patients] a quality of life we deserve." The guide was available online until APF shut its doors in May 2012.

247. Endo's NIPC website www.Painknowledge.com claimed that with opioids, "your level of function should improve; you may find you are now able to participate in activities of daily living, such as work and hobbies, that you were not able to enjoy when your pain was worse." In addition to "improved function," the website touted improved quality of life as a benefit of opioid therapy. The grant request that Endo approved for this project specifically indicated NIPC's intent to make claims of functional improvement.

248. Endo was the sole sponsor, through NIPC, of a series of CMEs titled *Persistent Pain in the Older Patient*, which claimed that chronic opioid therapy has been "shown to reduce pain and improve depressive symptoms and cognitive functioning." The CME was disseminated via webcast.

249. Mallinckrodt's website, in a section on responsible use of opioids, claims that "[t]he effective pain management offered by our medicines helps enable patients to stay in the

workplace, enjoy interactions with family and friends, and remain an active member of society.”⁸⁵

250. The Marketing Defendants’ claims that long-term use of opioids improves patient function and quality of life are unsupported by clinical evidence. There are no controlled studies of the use of opioids beyond 16 weeks, and there is no evidence that opioids improve patients’ pain and function long term. The FDA, for years, has made clear through warning letters to manufacturers the lack of evidence for claims that the use of opioids for chronic pain improves patients’ function and quality of life.⁸⁶ Based upon a review of the existing scientific evidence, the CDC Guideline concluded that “there is no good evidence that opioids improve pain or function with long-term use.”⁸⁷

251. Consistent with the CDC’s findings, substantial evidence exists demonstrating that opioid drugs are ineffective for the treatment of chronic pain and worsen patients’ health. For example, a 2006 study-of-studies found that opioids as a class did not demonstrate improvement in functional outcomes over other non-addicting treatments. The few longer-term studies of opioid use had “consistently poor results,” and “several studies have showed that

⁸⁵ Mallinckrodt Pharmaceuticals, Responsible Use, <http://www.mallinckrodt.com/corporate-responsibility/responsible-use>

⁸⁶ The FDA has warned other drugmakers that claims of improved function and quality of life were misleading. *See* Warning Letter from Thomas Abrams, Dir., FDA Div. of Mktg., Adver., & Commc’ns, to Doug Boothe, CEO, Actavis Elizabeth LLC (Feb. 18, 2010), (rejecting claims that Actavis’ opioid, Kadian, had an “overall positive impact on a patient’s work, physical and mental functioning, daily activities, or enjoyment of life.”); Warning Letter from Thomas Abrams, Dir., FDA Div. of Mktg., Adver., & Commc’ns, to Brian A. Markison, Chairman, President and Chief Executive Officer, King Pharmaceuticals, Inc. (March 24, 2008), (finding the claim that “patients who are treated with [Avinza (morphine sulfate ER)] experience an improvement in their overall function, social function, and ability to perform daily activities . . . has not been demonstrated by substantial evidence or substantial clinical experience.”). The FDA’s warning letters were available to Defendants on the FDA website.

⁸⁷ CDC Guideline, *supra* note 35, at 20.

[using] opioids for chronic pain may actually worsen pain and functioning,”⁸⁸ along with general health, mental health, and social function. Over time, even high doses of potent opioids often fail to control pain, and patients exposed to such doses are unable to function normally.

252. Increased duration of opioid use is also strongly associated with increased prevalence of mental health disorders (depression, anxiety, post-traumatic stress disorder, and substance abuse), increased psychological distress, and greater health care utilization. The CDC Guideline concluded that “[w]hile benefits for pain relief, function and quality of life with long-term opioid use for chronic pain are uncertain, risks associated with long-term opioid use are clearer and significant.”⁸⁹ According to the CDC, “for the vast majority of patients, the known, serious, and too-often-fatal risks far outweigh the unproven and transient benefits [of opioids for chronic pain].”⁹⁰

253. As one pain specialist observed, “opioids may work acceptably well for a while, but over the long term, function generally declines, as does general health, mental health, and social functioning. Over time, even high doses of potent opioids often fail to control pain, and these patients are unable to function normally.”⁹¹ In fact, research such as a 2008 study in the journal *Spine* has shown that pain sufferers prescribed opioids long-term suffered addiction that made them more likely to be disabled and unable to work.⁹² Another study demonstrated that

⁹² Jeffrey Dersh, et al., *Prescription Opioid Dependence is Associated With Poorer Outcomes in Disabling Spinal Disorders*, 33(20) *Spine* 2219, 2219-27 (Sept. 15, 2008).

injured workers who received a prescription opioid for more than seven days during the first six weeks after the injury were 2.2 times more likely to remain on work disability a year later than workers with similar injuries who received no opioids at all.⁹³ Moreover, the first randomized clinical trial designed to make head-to-head comparisons between opioids and other kinds of pain medications was recently published on March 6, 2018, in the Journal of the American Medical Association. The study reported that “[t]here was no significant difference in pain-related function between the 2 groups” – those whose pain was treated with opioids and those whose pain was treated with non-opioids, including acetaminophen and other non-steroidal anti-inflammatory drugs (“NSAIDs”) like ibuprofen. Accordingly, the study concluded: “Treatment with opioids was not superior to treatment with nonopioid medications for improving pain-related function over 12 months.”

g. Falsehood #7: Alternative forms of pain relief pose greater risks than opioids

254. In materials they produced, sponsored or controlled, the Marketing Defendants omitted known risks of chronic opioid therapy and emphasized or exaggerated risks of competing products so that prescribers and patients would favor opioids over other therapies such as over-the-counter acetaminophen or over-the-counter or prescription NSAIDs.

255. For example, in addition to failing to disclose in promotional materials the risks of addiction, overdose, and death, the Marketing Defendants routinely ignored the risks of hyperalgesia, a “known serious risk associated with chronic opioid analgesic therapy in which

⁹³ GM Franklin, BD Stover, et al., *Early Opioid Prescription and Subsequent Disability Among Workers With Back Injuries: the Disability Risk Identification Study Cohort*, 33 (2) Spine 199, 201-202 (Jan. 15, 2008).

the patient becomes more sensitive to certain painful stimuli over time;”⁹⁴ hormonal dysfunction;⁹⁵ decline in immune function; mental clouding, confusion, and dizziness; increased falls and fractures in the elderly;⁹⁶ neonatal abstinence syndrome (when an infant exposed to opioids prenatally suffers withdrawal after birth), and potentially fatal interactions with alcohol or with benzodiazepines, which are used to treat anxiety and may be co-prescribed with opioids, particularly to veterans suffering from pain.⁹⁷

256. The APF’s *Treatment Options: A Guide for People Living with Pain*, sponsored by Purdue and Cephalon, warned that risks of NSAIDs increase if “taken for more than a period of months,” with no corresponding warning about opioids. The publication falsely attributed 10,000 to 20,000 deaths annually to NSAID overdoses, when the figure is closer to 3,200.⁹⁸

257. Janssen sponsored *Finding Relief: Pain Management for Older Adults* (2009), that listed dose limitations as “disadvantages” of other pain medicines but omitted any discussion of risks of increased doses from opioids. *Finding Relief* described the advantages and disadvantages of NSAIDs on one page, and the “myths/facts” of opioids on the facing page. The

⁹⁸ Robert E. Tarone, et al., *Nonselective Nonaspirin Nonsteroidal Anti-Inflammatory Drugs and Gastrointestinal Bleeding: Relative and Absolute Risk Estimates from Recent Epidemiologic Studies*, 11 Am. J. of Therapeutics 17, 17-25 (2004).

disadvantages of NSAIDs are described as involving “stomach upset or bleeding,” “kidney or liver damage if taken at high doses or for a long time,” “adverse reactions in people with asthma,” and “can increase the risk of heart attack and stroke.” The only adverse effects of opioids listed are “upset stomach or sleepiness,” which the brochure claims will go away, and constipation.

258. Endo’s NIPC website, *Painknowledge.com*, which contained a flyer called “*Pain: Opioid Therapy*.” This publication listed opioids’ adverse effects but with significant omissions, including hyperalgesia, immune and hormone dysfunction, cognitive impairment, tolerance, dependence, addiction, and death.

259. As another example, the Endo-sponsored CME put on by NIPC, *Persistent Pain in the Older Adult*, discussed above, counseled that acetaminophen should be used only short-term and includes five slides on the FDA’s restrictions on acetaminophen and its adverse effects, including severe liver injury and anaphylaxis (shock). In contrast, the CME downplays the risk of opioids, claiming opioids have “possibly less potential for abuse than in younger patients,” and does not list overdose among the adverse effects. Some of those misrepresentations are described above; others are laid out below.

260. In April 2007, Endo sponsored an article aimed at prescribers, published in *Pain Medicine News*, titled “Case Challenges in Pain Management: Opioid Therapy for Chronic Pain.”⁹⁹ The article asserted:

Opioids represent a highly effective but controversial and often misunderstood class of analgesic medications for controlling both chronic and acute pain. The phenomenon of tolerance to opioids – the gradual waning of relief at a given dose – and fears of abuse,

⁹⁹ Charles E. Argoff, *Case Challenges in Pain Management: Opioid Therapy for Chronic Pain*, *Pain Med. News*, https://www.painmedicineneeds.com/download/BtoB_Opana_WM.pdf.

diversion, and misuse of these medications by patients have led many clinicians to be wary of prescribing these drugs, and/or to restrict dosages to levels that may be insufficient to provide meaningful relief.¹⁰⁰

261. To help allay these concerns, Endo emphasized the risks of NSAIDs as an alternative to opioids. The article included a case study that focused on the danger of extended use of NSAIDs, including that the subject was hospitalized with a massive upper gastrointestinal bleed believed to have resulted from his protracted NSAID use. In contrast, the article did not provide the same detail concerning the serious side effects associated with opioids.

262. Additionally, Purdue acting with Endo sponsored *Overview of Management Options*, a CME issued by the AMA in 2003, 2007, 2010, and 2013. The 2013 version remains available for CME credit. The CME taught that NSAIDs and other drugs, but not opioids, are unsafe at high doses.

263. As a result of the Marketing Defendants' deceptive promotion of opioids over safer and more effective drugs, opioid prescriptions increased even as the percentage of patients visiting a doctor for pain remained constant. A study of 7.8 million doctor visits between 2000 and 2010 found that opioid prescriptions increased from 11.3% to 19.6% of visits, as NSAID and acetaminophen prescriptions fell from 38% to 29%, driven primarily by the decline in NSAID prescribing.¹⁰¹

¹⁰⁰ *Id.* At 1.

¹⁰¹ M. Daubresse, *et al.*, *Ambulatory Diagnosis and Treatment of Nonmalignant Pain in the United States, 2000-2010*, 51(10) *Med. Care*, 870, 870-878 (2013). For back pain alone, the percentage of patients prescribed opioids increased from 19% to 29% between 1999 and 2010, even as the use of NSAIDs or acetaminophen declined from 39.9% to 24.5% of these visits; and referrals to physical therapy remained steady. *See also* J. Mafi, *et al.*, *Worsening Trends in the Management and Treatment of Back Pain*, 173(17) *J. of the Am Med. Assoc. of Internal Med.* 1573, 1573 (2013).

266. The reduced release of the drug over time means that the oxycodone no longer provides the same level of pain relief; as a result, in many patients, OxyContin does not last for the twelve hours for which Purdue promotes it—a fact that Purdue has known at all times relevant to this action.

267. OxyContin tablets provide an initial absorption of approximately 40% of the active medicine. This has a two-fold effect. First, the initial rush of nearly half of the powerful opioid triggers a powerful psychological response. OxyContin thus behaves more like an immediate-release opioid, which Purdue itself once claimed was more addicting in its original 1995 FDA-approved drug label. Second, the initial burst of oxycodone means that there is less of the drug at the end of the dosing period, which results in the drug not lasting for a full twelve hours and precipitates withdrawal symptoms in patients, a phenomenon known as “end of dose” failure. (The FDA found in 2008 that a “substantial number” of chronic pain patients will experience end-of-dose failure with OxyContin.)

268. End-of-dose failure renders OxyContin even more dangerous because patients begin to experience withdrawal symptoms, followed by a euphoric rush with their next dose—a cycle that fuels a craving for OxyContin. For this reason, Dr. Theodore Cicero, a neuropharmacologist at the Washington University School of Medicine in St. Louis, has called OxyContin’s 12-hour dosing “the perfect recipe for addiction.”¹⁰² Many patients will exacerbate this cycle by taking their next dose ahead of schedule or resorting to a rescue dose of another opioid, increasing the overall amount of opioids they are taking.

¹⁰² Harriet Ryan, et al., “‘You Want a Description of Hell?’ OxyContin’s 12-Hour Problem,” L.A. Times (May 5, 2016) <http://www.latimes.com/projects/oxycontin-part1/> (hereinafter, “*You Want a Description of Hell*”).

271. Purdue's 12-hour messaging was key to its competitive advantage over short-acting opioids that required patients to wake in the middle of the night to take their pills. Purdue advertisements also emphasized "Q12h" dosing. These include an advertisement in the February 2005 *Journal of Pain* and 2006 *Clinical Journal of Pain* featuring an OxyContin logo with two pill cups, reinforcing the twice-a-day message. A Purdue memo to the OxyContin launch team stated that "OxyContin's positioning statement is 'all of the analgesic efficacy of immediate-release oxycodone, with convenient q12h dosing,'" and further that "[t]he convenience of q12h dosing was emphasized as the most important benefit."¹⁰³

272. In keeping with this positioning statement, a Purdue regional manager emphasized in a 1996 sales strategy memo that representatives should "convinc[e] the physician that there is no need" for prescribing OxyContin in shorter intervals than the recommended 12-hour interval, and instead the solution is prescribing higher doses."¹⁰⁴ One sales manager instructed her team that anything shorter than 12-hour dosing "needs to be nipped in the bud. NOW!!"¹⁰⁵

273. Purdue executives therefore maintained the messaging of twelve-hour dosing even when many reports surfaced that OxyContin did not last twelve hours. Instead of acknowledging a need for more frequent dosing, Purdue instructed its representatives to push higher-strength pills, even though higher dosing carries its own risks, as noted above. It also means that patients will experience higher highs and lower lows, increasing their craving for their next pill. (Urging higher doses to avoid end-of-dose failure is like advising a pilot to avoid

¹⁰³ Memorandum from Lydia Johnson, Marketing Executive at Purdue, to members of Oxycontin Launch Team (Apr. 4, 1995), <http://documents.latimes.com/oxycontin-launch-1995/> (last updated May 5, 2016).

¹⁰⁴ Letter from Fisher, *supra* note 78.

¹⁰⁵ *You Want a Description of Hell*, *supra* note 102.

a crash by flying higher.) Nationwide, based on an analysis by the *Los Angeles Times*, more than 52% of patients taking OxyContin longer than three months are on doses greater than 60 milligrams per day—which converts to the 90 MED that the CDC Guideline urges prescribers to “avoid” or “carefully justify.”¹⁰⁶

274. That OxyContin did not provide pain relief for a full twelve hours was known to Purdue, and Purdue’s competitors, but was not disclosed to prescribers. Purdue’s knowledge of some pain specialists’ tendency to prescribe OxyContin three times per day instead of two was set out in Purdue’s internal documents as early as 1999 and is apparent from MEDWATCH Adverse Event reports for OxyContin.

275. Even Purdue’s competitor, Endo, was aware of the problem; Endo attempted to position its Opana ER drug as offering “durable” pain relief, which Endo understood to suggest a contrast to OxyContin. Opana ER advisory board meetings featured pain specialists citing lack of 12-hour dosing as a disadvantage of OxyContin. Endo even ran advertisements for Opana ER referring to “real” 12-hour dosing.

276. Purdue’s failure to disclose the prevalence of end-of-dose failure meant that prescribers were misinformed about the advantages of OxyContin in a manner that preserved Purdue’s competitive advantage and profits, at the expense of patients, who were placed at greater risk of overdose, addiction, and other adverse effects.

i. Falsehood #9: New formulations of certain opioids successfully deter abuse

277. Rather than take the widespread opioid abuse as reason to cease their untruthful marketing efforts, Marketing Defendants Purdue and Endo seized them as a competitive

¹⁰⁶ CDC Guideline, *supra* note 35, at 16.

opportunity. These companies developed and oversold “abuse-deterrent formulations” (“ADF”) opioids as a solution to opioid abuse and as a reason that doctors could continue to safely prescribe their opioids, as well as an advantage of these expensive branded drugs over other opioids. These Defendants’ false and misleading marketing of the benefits of their ADF opioids preserved and expanded their sales and falsely reassured prescribers thereby prolonging the opioid epidemic. Other Marketing Defendants, including Actavis and Mallinckrodt, also promoted their branded opioids as formulated to be less addictive or less subject to abuse than other opioids.

278. The CDC Guideline confirms that “[n]o studies” support the notion that “abuse-deterrent technologies [are] a risk mitigation strategy for deterring or preventing abuse,” noting that the technologies “do not prevent opioid abuse through oral intake, the most common route of opioid abuse, and can still be abused by non-oral routes.” Tom Frieden, the former Director of the CDC, reported that his staff could not find “any evidence showing the updated opioids [ADF opioids] actually reduce rates of addiction, overdoses, or death.”

i. Purdue’s deceptive marketing of reformulated OxyContin and Hysingla ER

279. Reformulated ADF OxyContin was approved by the FDA in April 2010. It was not until 2013 that the FDA, in response to a citizen petition filed by Purdue, permitted reference to the abuse-deterrent properties in its label. When Hysingla ER (extended-release hydrocodone) launched in 2014, the product included similar abuse-deterrent properties and limitations. But in the beginning, the FDA made clear the limited claims that could be made about ADF, noting that no evidence supported claims that ADF prevented tampering, oral abuse, or overall rates of abuse.

280. It is unlikely a coincidence that reformulated OxyContin was introduced shortly before generic versions of OxyContin were to become available, threatening to erode Purdue's market share and the price it could charge. Purdue nonetheless touted its introduction of ADF opioids as evidence of its good corporate citizenship and commitment to address the opioid crisis.

281. Despite its self-proclaimed good intention, Purdue merely incorporated its generally deceptive tactics with respect to ADF. Purdue sales representatives regularly overstated and misstated the evidence for and impact of the abuse-deterrent features of these opioids. Specifically, Purdue sales representatives:

- claimed that Purdue's ADF opioids prevent tampering and that its ADFs could not be crushed or snorted;
- claimed that Purdue's ADF opioids reduce opioid abuse and diversion;
- asserted or suggested that its ADF opioids are non-addictive or less addictive,
- asserted or suggested that Purdue's ADF opioids are safer than other opioids, could not be abused or tampered with, and were not sought out for diversion; and
- failed to disclose that Purdue's ADF opioids do not impact oral abuse or misuse.

282. If pressed, Purdue acknowledged that perhaps some "extreme" patients might still abuse the drug, but claimed the ADF features protect the majority of patients. These misrepresentations and omissions are misleading and contrary to Purdue's ADF labels, Purdue's own information, and publicly available data.

283. Purdue knew or should have known that reformulated OxyContin is not more tamper-resistant than the original OxyContin and is still regularly tampered with and abused.

284. In 2009, the FDA noted in permitting ADF labeling that "the tamper-resistant properties will have no effect on abuse by the oral route (the most common mode of abuse)." In the 2012 medical office review of Purdue's application to include an abuse-deterrence claim in

its label for OxyContin, the FDA noted that the overwhelming majority of deaths linked to OxyContin were associated with oral consumption, and that only 2% of deaths were associated with recent injection and only 0.2% with snorting the drug.

285. The FDA's Director of the Division of Epidemiology stated in September 2015 that no data that she had seen suggested the reformulation of OxyContin "actually made a reduction in abuse," between continued oral abuse, shifts to injection of other drugs (including heroin), and defeat of the ADF mechanism. Even Purdue's own funded research shows that half of OxyContin abusers continued to abuse OxyContin orally after the reformulation rather than shift to other drugs.

286. A 2013 article presented by Purdue employees based on review of data from poison control centers concluded that ADF OxyContin can reduce abuse, but it ignored important negative findings. The study revealed that abuse merely shifted to other drugs and that, when the actual incidence of harmful exposures was calculated, there were *more* harmful exposures to opioids after the reformulation of OxyContin. In short, the article deceptively emphasized the advantages and ignored the disadvantages of ADF OxyContin.

287. Websites and message boards used by drug abusers, such as bluelight.org and reddit.com, report a variety of ways to tamper with OxyContin and Hysingla ER, including through grinding, microwaving then freezing, or drinking soda or fruit juice in which a tablet is dissolved. Purdue has been aware of these methods of abuse for more than a decade.

288. One-third of the patients in a 2015 study defeated the ADF mechanism and were able to continue inhaling or injecting the drug. To the extent that the abuse of Purdue's ADF opioids was reduced, there was no meaningful reduction in opioid abuse overall, as many users simply shifted to other opioids such as heroin.

289. In 2015, claiming a need to further assess its data, Purdue abruptly withdrew a supplemental new drug application related to reformulated OxyContin one day before FDA staff was to release its assessment of the application. The staff review preceded an FDA advisory committee meeting related to new studies by Purdue “evaluating the misuse and/or abuse of reformulated OxyContin” and whether those studies “have demonstrated that the reformulated product has a meaningful impact on abuse.”¹⁰⁷ Upon information and belief, Purdue never presented the data to the FDA because the data would not have supported claims that OxyContin’s ADF properties reduced abuse or misuse.

290. Despite Purdue’s own evidence of abuse, and the lack of evidence regarding the benefit of Purdue’s ADF opioids in reducing abuse, Dr. David Haddox, then the Vice President of Health Policy for Purdue, falsely claimed in 2016 that the evidence does not show that Purdue’s ADF opioids are being abused in large numbers. Purdue’s recent advertisements in national newspapers also continues to claim its ADF opioids as evidence of its efforts to reduce opioid abuse, continuing to mislead prescribers, patients, payors, and the public about the efficacy of its actions.

ii. Endo’s deceptive marketing of reformulated Opana ER

291. As the expiration of its patent exclusivity for Opana ER neared, Endo also made abuse-deterrence a key to its marketing strategy.¹⁰⁸

292. Opana ER was particularly likely to be tampered with and abused. That is because Opana ER has lower “bioavailability” than other opioids, meaning that the active pharmaceutical

¹⁰⁷ Jill Hartzler Warner, Assoc. Comm’r for Special Med. Programs, Joint Meeting of the Drug Safety and Risk Management Advisory Committee and the Anesthetic and Analgesic Drug Products Advisory Committee; Notice of Meeting, 80(103) Fed. Reg. 30686, 30686 (May 29, 2015).

¹⁰⁸ ENDO-CHI_LIT-00141071.

ingredient (the “API” or opioid) does not absorb into the bloodstream as rapidly as other opioids when taken orally. Additionally, when swallowed whole, the extended-release mechanism remains intact, so that only 10% of Opana ER’s API is released into the patient’s bloodstream relative to injection; when it is taken intranasally, that rate increases to 43%. The larger gap between bioavailability when consumed orally versus snorting or injection, the greater the incentive for users to manipulate the drug’s means of administration.

293. Endo knew by July 2011 that “some newer statistics around abuse and diversion are not favorable to our product.”¹⁰⁹

294. In December 2011, Endo obtained approval for a new formulation of Opana ER that added a hard coating that the company claimed made it crush-resistant.

295. Even prior to its approval, the FDA had advised Endo that it could not market the new Opana ER as abuse-deterrent. The FDA found that such promotional claims “may provide a false sense of security since the product may be chewed and ground for subsequent abuse.” In other words, Opana ER was still crushable. Indeed, Endo’s own studies dating from 2009 and 2010 showed that Opana ER could be crushed and ground, and, in its correspondence with the FDA, Endo admitted that “[i]t has not been established that this new formulation of Opana ER is less subject to misuse, abuse, diversion, overdose, or addiction.”

296. Furthermore, a January 4, 2011 FDA Discipline Review letter made clear to Endo that “[t]he totality of these claims and presentations suggest that, as a result of its new formulation, Opana ER offers a therapeutic advantage over the original formulation when this has not been demonstrated by substantial evidence or substantial clinical experience. In addition these claims misleadingly minimize the risks associated with Opana ER by suggesting that the

¹⁰⁹ ENDO-CHI_LIT-00401875.

new formulation's "INTAC" technology confers some form of abuse-deterrence properties when this has not been demonstrated by substantial evidence."¹¹⁰ The FDA acknowledged that while there is "evidence to support some limited improvement" provided by the new coating, but it would not let Endo promote any benefit because "there are several limitations to this data."¹¹¹ Also, Endo was required to add language to its label specifically indicating that "Opana ER tablets may be abused by crushing, chewing, snorting, or injecting the product. These practices will result in less controlled delivery of the opioid and pose a significant risk to the abuser that could result in overdose and death."¹¹²

297. The FDA expressed similar concerns in nearly identical language in a May 7, 2012 letter to Endo responding to a February 2, 2012, "request ... for comments on a launch Draft Professional Detail Aid ... for Opana ER." The FDA's May 2012 letter also includes a full two pages of comments regarding "Omissions of material facts" that Endo left out of the promotional materials.

298. Endo consciously chose not to do any post-approval studies that might satisfy the FDA. According to internal documents, the company decided, by the time its studies would be done, generics would be on the market and "any advantages for commercials will have disappeared."¹¹³ However, this lack of evidence did not deter Endo from marketing Opana ER as ADF while its commercial window remained open.

299. Nonetheless, in August of 2012, Endo submitted a citizen petition asking the FDA for permission to change its label to indicate that Opana ER was abuse-resistant, both in that it

¹¹⁰ ENDO-CHI_LIT-00075639-45, at 40.

¹¹¹ *Id.*

¹¹² *Id.* at 39.

¹¹³ ENDO CHI LIG 65055-59, at 57.

was less able to be crushed and snorted and that it was resistant injection by syringe. Borrowing a page from Purdue's playbook, Endo announced it would withdraw original Opana ER from the market and sought a determination that its decision was made for safety reasons (its lack of abuse-deterrence), which would prevent generic copies of original Opana ER.

300. Endo then sued the FDA, seeking to force expedited consideration of its citizen petition. The court filings confirmed Endo's true motives: in a declaration submitted with its lawsuit, Endo's chief operating officer indicated that a generic version of Opana ER would decrease the company's revenue by up to \$135 million per year. Endo also claimed that if the FDA did not block generic competition, \$125 million, which Endo spent on developing the reformulated drug to "promote the public welfare" would be lost.¹¹⁴ The FDA responded that: "Endo's true interest in expedited FDA consideration stems from business concerns rather than protection of the public health."¹¹⁵

301. Despite Endo's purported concern with public safety, not only did Endo continue to distribute original, admittedly unsafe Opana ER for nine months after the reformulated version became available, it declined to recall original Opana ER despite its dangers. In fact, Endo claimed in September 2012 to be "proud" that "almost all remaining inventory" of the original Opana ER had "been utilized."¹¹⁶

¹¹⁴ Plf.'s Opp. to Defs.' and Intervenor's Motions to Dismiss and Plf's Reply in Supp. of Motion for Prelim. Inj. ("Endo Br."), [ECF No. 23] *Endo Pharms. Inc. v. U.S. Food and Drug Admin., et al.*, No. 1:12-cv-01936, at 20 (D.D.C. Dec. 14, 2012).

¹¹⁵ Defs.' Resp. to the Court's Nov. 30, 2012 Order [ECF No. 9], *Endo Pharms. Inc. v. U.S. Food and Drug Admin., et al.*, No. 1:12-cv-01936, at 6 (D.D.C. Dec. 3, 2012).

¹¹⁶ *Id.*; Endo News Release, (Sept. 6, 2012) [ECF No. 18-4], *Endo Pharms Inc. v. U.S. Food and Drug Admin., et al.*, No. 1:12-cv-01936, (D.D.C. Dec. 9, 2012).

302. In its citizen petition, Endo asserted that redesigned Opana ER had “safety advantages.” Endo even relied on its rejected assertion that Opana was less crushable to argue that it developed Opana ER for patient safety reasons and that the new formulation would help, for example, “where children unintentionally chew the tablets prior to an accidental ingestion.”¹¹⁷

303. However, in rejecting the petition in a 2013 decision, the FDA found that “study data show that the reformulated version's extended-release features can be compromised when subjected to ... cutting, grinding, or chewing.” The FDA also determined that “reformulated Opana ER” could also be “readily prepared for injections and more easily injected[.]” In fact, the FDA warned that preliminary data—including in Endo’s own studies—suggested that a higher percentage of reformulated Opana ER abuse is via injection than was the case with the original formulation.

304. Meanwhile, in 2012, an internal memorandum to Endo account executives noted that abuse of Opana ER had “increased significantly” in the wake of the purportedly abuse-deterrent formulation. In February 2013, Endo received abuse data regarding Opana ER from Inflexxion, Inc., which gathers information from substance abusers entering treatment and reviews abuse-focused internet discussions, that confirmed continued abuse, particularly by injection.

305. In 2009, only 3% of Opana ER abuse was by intravenous means. Since the reformulation, injection of Opana ER increased by more than 500%. Endo’s own data, presented in 2014, found between October 2012 and March 2014, 64% of abusers of Opana ER did so by

¹¹⁷ Citizen Petition, FDA Docket 2012-8-0895, at 5.

injection, compared with 36% for the old formulation.¹¹⁸ The transition into injection of Opana ER made the drug even less safe than the original formulation. Injection carries risks of HIV, Hepatitis C, and, in reformulated Opana ER's specific case, the blood-clotting disorder thrombotic thrombocytopenic purpura (TTP), which can cause kidney failure.

306. Publicly, Endo sought to marginalize the problem. On a 2013 call with investors, when asked about an outbreak of TTP in Tennessee from injecting Opana ER, Endo sought to limit its import by assigning it to "a very, very distinct area of the country."

307. Despite its knowledge that Opana ER was widely abused and injected, Endo marketed the drug as tamper-resistant and abuse-deterrent. Upon information and belief, based on the company's detailing elsewhere, Endo sales representatives informed doctors that Opana ER was abuse-deterrent, could not be tampered with, and was safe. In addition, sales representatives did not disclose evidence that Opana was easier to abuse intravenously and, if pressed by prescribers, claimed that while outlier patients might find a way to abuse the drug, most would be protected.

308. A review of national surveys of prescribers regarding their "take-aways" from pharmaceutical detailing confirms that prescribers remember being told Opana ER was tamper-resistant. Endo also tracked messages that doctors took from its in-person marketing. Among the advantages of Opana ER, according to participating doctors, was its "low abuse potential." An internal Endo document also notes that market research showed that, "[l]ow abuse potential

¹¹⁸ Theresa Cassidy, et al. *The Changing Abuse Ecology: Implications for Evaluating the Abuse Pattern of Extended-Release Oxymorphone and Abuse-Deterrent Opioid Formulations*, Pain Week Abstract 2014, : <https://www.painweek.org/assets/documents/general/724-painweek2014acceptedabstracts.pdf>.

continues as the primary factor influencing physicians' anticipated increase in use of Opana ER over the next 6 months."¹¹⁹

309. In its written materials, Endo marketed Opana ER as having been designed to be crush-resistant, knowing that this would (falsely) imply that Opana ER actually was crush-resistant and that this crush-resistant quality would make Opana ER less likely to be abused. For example, a June 14, 2012 Endo press release announced "the completion of the company's transition of its Opana ER franchise to the new formulation designed to be crush resistant."

310. The press release further stated that: "We firmly believe that the new formulation of Opana ER, coupled with our long-term commitment to awareness and education around appropriate use of opioids will benefit patients, physicians and payers. The press release described the old formulation of Opana as subject to abuse and misuse, but failed to disclose the absence of evidence that reformulated Opana was any better. In September 2012, another Endo press release stressed that reformulated Opana ER employed "INTAC Technology" and continued to describe the drug as "designed to be crush-resistant."

311. Similarly, journal advertisements that appeared in April 2013 stated Opana ER was "designed to be crush resistant." A January 2013 article in *Pain Medicine News*, based in part on an Endo press release, described Opana ER as "crush-resistant." This article was posted on the *Pain Medicine News* website, which was accessible to patients and prescribers.

312. Endo, upon information and belief, targeted particular geographies for the redesigned Opana ER where abuse was most rampant.¹²⁰

¹¹⁹ ENDO-CHI_LIT-00156509, at 97.

¹²⁰ ENDO-CHI_LIT-00054637, at 4.

313. In March 2017, because Opana ER could be “readily prepared for injection” and was linked to outbreaks of HIV and TTP, an FDA advisory committee recommended that Opana be withdrawn from the market. The FDA adopted this recommendation on June 8, 2017.¹²¹ Endo announced on July 6, 2017 that it would agree to stop marketing and selling Opana ER.¹²² However, by this point, the damage had been done. Even then, Endo continued to insist, falsely, that it “has taken significant steps over the years to combat misuse and abuse.”

iii. Other Marketing Defendants’ misrepresentations regarding abuse deterrence

314. A guide for prescribers under Actavis’s copyright deceptively represents that Kadian is more difficult to abuse and less addictive than other opioids. The guide declares that “unique pharmaceutical formulation of KADIAN may offer some protection from extraction of morphine sulfate for intravenous use by illicit users,” and “KADIAN may be less likely to be abused by health care providers and illicit users” because of its “[s]low onset of action.”¹²³ Kadian, however, was not approved by the FDA as abuse deterrent, and, upon information and belief, Actavis had no studies to suggest it was.

315. Mallinckrodt promoted both Exalgo (extended-release hydromorphone) and Xartemis XR (oxycodone and acetaminophen) as specifically formulated to reduce abuse. For example, Mallinckrodt’s promotional materials stated that “the physical properties of EXALGO may make it difficult to extract the active ingredient using common forms of physical and

¹²¹ Press Release, U.S. Food and Drug Admin., FDA Requests Removal of Opana ER for Risks Related to Abuse (June 8, 2017) <https://www.fda.gov/NewsEvents/Newsroom/PressAnnouncements/ucm562401.htm>

¹²² Press Release, . Food & Drug Admin., FDA Requests Removal of Opana ER for Risks Related to Abuse (June 8, 2017), <https://www.fda.gov/NewsEvents/Newsroom/PressAnnouncements/ucm562401.htm>.

¹²³ ACTAVIS0947868-72, at 68-69.

chemical tampering, including chewing, crushing and dissolving.”¹²⁴ One member of the FDA’s Controlled Substance Staff, however, noted in 2010 that hydromorphone has “a high abuse potential comparable to oxycodone” and further stated that “we predict that Exalgo will have high levels of abuse and diversion.”¹²⁵

316. With respect to Xartemis XR, Mallinckrodt’s promotional materials stated that “XARTEMIS XR has technology that requires abusers to exert additional effort to extract the active ingredient from the large quantity of inactive and deterrent ingredients.”¹²⁶ In anticipation of Xartemis XR’s approval, Mallinckrodt added 150-200 sales representatives to promote it, and CEO Mark Trudeau said the drug could generate “hundreds of millions in revenue.”¹²⁷

317. While Marketing Defendants promote patented technology as the solution to opioid abuse and addiction, none of their “technology” addresses the most common form of abuse—oral ingestion—and their statements regarding abuse-deterrent formulations give the misleading impression that these reformulated opioids can be prescribed safely.

318. In sum, each of the nine categories of misrepresentations discussed above regarding the use of opioids to treat chronic pain was not supported by or was contrary to the scientific evidence. In addition, the misrepresentations and omissions set forth above and

¹²⁴ Press Release, Covidien, *FDA Approves Mallinckrodt’s EXALGO® (hydromorphone HCl) Extended-Release Tablets 32 mg (CII) for Opioid-Tolerant Patients with Moderate-to-Severe Chronic Pain* (Aug. 27, 2012), <http://newsroom.medtronic.com/phoenix.zhtml?c=251324&p=irol-newsArticle&ID=2004159>

¹²⁵ <https://www.markey.senate.gov/imo/media/doc/2016-02-19-Markey-ADF-Opioid-timeline.pdf>

¹²⁷ Samantha Liss, *Mallinckrodt Banks on New Painkillers for Sales*, St. Louis Bus. J. (Dec. 30, 2013), <http://argencapital.com/mallinckrodt-banks-on-new-painkillers-for-sales/>

elsewhere in this Complaint are misleading and contrary to the Marketing Defendants' products' labels.

2. The Marketing Defendants Disseminated Their Misleading Messages About Opioids Through Multiple Channels

319. The Marketing Defendants' false marketing campaign not only targeted the medical community who had to treat chronic pain, but also patients who experience chronic pain.

320. The Marketing Defendants utilized various channels to carry out their marketing scheme of targeting the medical community and patients with deceptive information about opioids: (1) "Front Groups" with the appearance of independence from the Marketing Defendants; (2) KOLs, that is, doctors who were paid by the Marketing Defendants to promote their pro-opioid message; (3) CME programs controlled and/or funded by the Marketing Defendants; (4) branded advertising; (5) unbranded advertising; (6) publications; (7) direct, targeted communications with prescribers by sales representatives or "detailers"; and (8) speakers bureaus and programs.

a. The Marketing Defendants Directed Front Groups to Deceptively Promote Opioid Use

321. Patient advocacy groups and professional associations also became vehicles to reach prescribers, patients, and policymakers. Marketing Defendants exerted influence and effective control over the messaging by these groups by providing major funding directly to them, as well as through KOLs who served on their boards. These "Front Groups" put out patient education materials, treatment guidelines and CMEs that supported the use of opioids for chronic pain, overstated their benefits, and understated their risks.¹²⁸ Marketing Defendants

¹²⁸ U.S. S. Homeland Sec. & Governmental Aff. Comm., Ranking Members' Office, *Fueling an Epidemic*, (Feb. 12, 2018) <https://www.hsdl.org/?abstract&did=808171> at 3, (hereinafter "*Fueling an Epidemic*"),.

funded these Front Groups in order to ensure supportive messages from these seemingly neutral and credible third parties, and their funding did, in fact, ensure such supportive messages—often at the expense of their own constituencies.

322. “Patient advocacy organizations and professional societies like the Front Groups ‘play a significant role in shaping health policy debates, setting national guidelines for patient treatment, raising disease awareness, and educating the public.’”¹²⁹ “Even small organizations—with ‘their large numbers and credibility with policymakers and the public’—have ‘extensive influence in specific disease areas.’ Larger organizations with extensive funding and outreach capabilities ‘likely have a substantial effect on policies relevant to their industry sponsors.’”¹³⁰ Indeed, the U.S. Senate’s report, *Fueling an Epidemic: Exposing the Financial Ties Between Opioid Manufacturers and Third Party Advocacy Groups*,¹³¹ which arose out of a 2017 Senate investigation and, drawing on disclosures from Purdue, Janssen, Insys, and other opioid manufacturers, “provides the first comprehensive snapshot of the financial connections between opioid manufacturers and advocacy groups and professional societies operating in the area of opioids policy,”¹³² found that the Marketing Defendants made millions of dollars’ worth of contributions to various Front Groups.¹³³

¹²⁹ *Id.* at p2.

¹³⁰ *Id.*

¹³¹ *Id.* at 3.

¹³² *Id.* at 1.

¹³³ *Id.* at 3.

323. The Marketing Defendants also “made substantial payments to individual group executives, staff members, board members, and advisory board members” affiliated with the Front Groups subject to the Senate Committee’s study.¹³⁴

324. As the Senate *Fueling an Epidemic* Report found, the Front Groups “amplified or issued messages that reinforce industry efforts to promote opioid prescription and use, including guidelines and policies minimizing the risk of addiction and promoting opioids for chronic pain.”¹³⁵ They also “lobbied to change laws directed at curbing opioid use, strongly criticized landmark CDC Guideline on opioid prescribing, and challenged legal efforts to hold physicians and industry executives responsible for overprescription and misbranding.”¹³⁶

325. The Marketing Defendants took an active role in guiding, reviewing, and approving many of the false and misleading statements issued by the Front Groups, ensuring that Defendants were consistently in control of their content. By funding, directing, editing, approving, and distributing these materials, Defendants exercised control over and adopted their false and deceptive messages and acted in concert with the Front Groups and through the Front groups, with each other to deceptively promote the use of opioids for the treatment of chronic pain.

i. American Pain Foundation

326. The most prominent of the Front Groups was the American Pain Foundation (“APF”). While APF held itself out as an independent patient advocacy organization, in reality it received 90% of its funding in 2010 from the drug and medical-device industry, including from

¹³⁴ *Id.* at 10.

¹³⁵ *Id.* at 12-15.

¹³⁶ *Id.* at 12.

defendants Purdue, Endo, Janssen, and Cephalon. APF received more than \$10 million in funding from opioid manufacturers from 2007 until it closed its doors in May 2012. By 2011, APF was entirely dependent on incoming grants from Defendants Purdue, Cephalon, Endo, and others to avoid using its line of credit. Endo was APF's largest donor and provided more than half of its \$10 million in funding from 2007 to 2012.

327. For example, APF published a guide sponsored by Cephalon and Purdue titled *Treatment Options: A Guide for People Living with Pain*, and distributed 17,200 copies of this guide in one year alone, according to its 2007 annual report. This guide contains multiple misrepresentations regarding opioid use, which are discussed below.

328. APF also developed the National Initiative on Pain Control ("NIPC"), which ran a facially unaffiliated website, www.painknowledge.com. NIPC promoted itself as an education initiative led by its expert leadership team, including purported experts in the pain management field. NIPC published unaccredited prescriber education programs (accredited programs are reviewed by a third party and must meet certain requirements of independence from pharmaceutical companies), including a series of "dinner dialogues." But it was Endo that substantially controlled NIPC, by funding NIPC projects, developing, specifying, and reviewing its content, and distributing NIPC materials. Endo's control of NIPC was such that Endo listed it as one of its "professional education initiative[s]" in a plan Endo submitted to the FDA. Yet, Endo's involvement in NIPC was nowhere disclosed on the website pages describing NIPC or www.painknowledge.org. Endo estimated it would reach 60,000 prescribers through NIPC.

329. APF was often called upon to provide "patient representatives" for the Marketing Defendants' promotional activities, including for Purdue's "Partners Against Pain" and Janssen's "Let's Talk Pain." Although APF presented itself as a patient advocacy organization, it

functioned largely as an advocate for the interests of the Marketing Defendants, not patients. As Purdue told APF in 2001, the basis of a grant to the organization was Purdue's desire to strategically align its investments in nonprofit organizations that share [its] business interests.

330. In practice, APF operated in close collaboration with Marketing Defendants, submitting grant proposals seeking to fund activities and publications suggested by Marketing Defendants and assisting in marketing projects for Marketing Defendants.

331. This alignment of interests was expressed most forcefully in the fact that Purdue hired APF to provide consulting services on its marketing initiatives. Purdue and APF entered into a "Master Consulting Services" Agreement on September 14, 2011. That agreement gave Purdue substantial rights to control APF's work related to a specific promotional project. Moreover, based on the assignment of particular Purdue "contacts" for each project and APF's periodic reporting on their progress, the agreement enabled Purdue to be regularly aware of the misrepresentations APF was disseminating regarding the use of opioids to treat chronic pain in connection with that project. The agreement gave Purdue—but not APF—the right to end the project (and, thus, APF's funding) for any reason. Even for projects not produced during the terms of this Agreement, the Agreement demonstrates APF's lack of independence and willingness to harness itself to Purdue's control and commercial interests, which would have carried across all of APF's work.

332. APF's Board of Directors was largely comprised of doctors who were on the Marketing Defendants' payrolls, either as consultants or speakers at medical events. The close relationship between APF and the Marketing Defendants demonstrates APF's clear lack of independence, in its finances, management, and mission, and its willingness to allow Marketing Defendants to control its activities and messages supports an inference that each Marketing

Defendant that worked with it was able to exercise editorial control over its publications—even when Marketing Defendants’ messages contradicted APF’s internal conclusions. For example, a roundtable convened by APF and funded by Endo also acknowledged the lack of evidence to support chronic opioid therapy. APF’s formal summary of the meeting notes concluded that: “[An] important barrier[] to appropriate opioid management [is] the lack of confirmatory data about the long-term safety and efficacy of opioids in non-cancer chronic pain, amid cumulative clinical evidence.”

333. In May 2012, the U.S. Senate Finance Committee began looking into APF to determine the links, financial and otherwise, between the organization and the manufacturers of opioid painkillers. Within days of being targeted by the Senate investigation, APF’s board voted to dissolve the organization “due to irreparable economic circumstances.” APF then “cease[d] to exist, effective immediately.” Without support from Marketing Defendants, to whom APF could no longer be helpful, APF was no longer financially viable.

ii. American Academy of Pain Medicine and the American Pain Society

334. The American Academy of Pain Medicine (“AAPM”) and the American Pain Society (“APS”) are professional medical societies, each of which received substantial funding from Defendants from 2009 to 2013. In 1997, AAPM issued a “consensus” statement that endorsed opioids to treat chronic pain and claimed that the risk that patients would become addicted to opioids was low.¹³⁷ The Chair of the committee that issued the statement, Dr. J. David Haddox, was at the time a paid speaker for Purdue. The sole consultant to the committee

¹³⁷ Consensus Statement by the Am. Acad. of Pain Med. & the Am. Pain Soc’y, *The Use of Opioids for the Treatment of Chronic Pain*, APS & AAPM (1997). <http://www.stgeorgeutah.com/wp-content/uploads/2016/05/OPIOIDES.DOLORCRONICO.pdf> (August 18, 2017).

was Dr. Russell Portenoy, who was also a spokesperson for Purdue. The consensus statement, which also formed the foundation of the 1998 Guidelines, was published on the AAPM's website.

335. AAPM's corporate council includes Purdue, Depomed, Teva and other pharmaceutical companies. AAPM's past presidents include Haddox (1998), Dr. Scott Fishman ("Fishman") (2005), Dr. Perry G. Fine ("Fine") (2011) and Dr. Lynn R. Webster ("Webster") (2013), all of whose connections to the opioid manufacturers are well-documented as set forth below.

336. Fishman, who also served as a KOL for Marketing Defendants, stated that he would place the organization "at the forefront" of teaching that "the risks of addiction are . . . small and can be managed."¹³⁸

337. AAPM received over \$2.2 million in funding since 2009 from opioid manufacturers. AAPM maintained a corporate relations council, whose members paid \$25,000 per year (on top of other funding) to participate. The benefits included allowing members to present educational programs at off-site dinner symposia in connection with AAPM's marquee event – its annual meeting held in Palm Springs, California, or other resort locations.

338. AAPM describes the annual event as an "exclusive venue" for offering CMEs to doctors. Membership in the corporate relations council also allows drug company executives and marketing staff to meet with AAPM executive committee members in small settings. Defendants Endo, Purdue, and Cephalon were members of the council and presented deceptive programs to

¹³⁸ Interview by Paula Moyer with Scott M. Fishman, M.D., Professor of Anesthesiology and Pain Med., Chief of the Div. of Pain Med., Univ. of Cal., Davis (2005), <http://www.medscape.org/viewarticle/500829>.

doctors who attended this annual event. The conferences sponsored by AAPM heavily emphasized CME sessions on opioids – 37 out of roughly 40 at one conference alone.

339. AAPM's staff understood that they and their industry funders were engaged in a common task. Defendants were able to influence AAPM through both their significant and regular funding and the leadership of pro-opioid KOLs within the organization.

340. AAPM and APS issued their own guidelines in 2009 ("2009 Guidelines") AAPM, with the assistance, prompting, involvement, and funding of Marketing Defendants, issued the treatment guidelines discussed herein, and continued to recommend the use of opioids to treat chronic pain. Fourteen of the 21 panel members who drafted the 2009 Guidelines, including KOL Dr. Fine, received support from Defendants Janssen, Cephalon, Endo, and Purdue. Of these individuals, six received support from Purdue, eight from Teva, nine from Janssen, and nine from Endo.

341. One panel member, Dr. Joel Saper, Clinical Professor of Neurology at Michigan State University and founder of the Michigan Headache & Neurological Institute, resigned from the panel because of his concerns that the Guidelines were influenced by contributions that drug companies, including Purdue, Endo, Janssen, and Teva, made to the sponsoring organizations and committee members.

342. Dr. Gilbert Fanciullo, now retired as a professor at Dartmouth College's Geisel School of Medicine, who also served on the AAPM/APS Guidelines panel, has since described them as "skewed" by drug companies and "biased in many important respects," including the high presumptive maximum dose, lack of suggested mandatory urine toxicology testing, and claims of a low risk of addiction.

343. The 2009 Guidelines have been a particularly effective channel of deception. They have influenced not only treating physicians, but also the scientific literature on opioids; they were reprinted in the *Journal of Pain*, have been cited hundreds of times in academic literature, were disseminated during the relevant time period, and were and are available online. Treatment guidelines are especially influential with primary care physicians and family doctors to whom Marketing Defendants promoted opioids, whose lack of specialized training in pain management and opioids makes them more reliant on, and less able to evaluate, these guidelines. For that reason, the CDC has recognized that treatment guidelines can “change prescribing practices.”¹³⁹

344. The 2009 Guidelines are relied upon by doctors, especially general practitioners and family doctors who have no specific training in treating chronic pain.

345. The Marketing Defendants widely cited and promoted the 2009 Guidelines without disclosing the lack of evidence to support their conclusions, their involvement in the development of the Guidelines or their financial backing of the authors of these Guidelines. For example, a speaker presentation prepared by Endo in 2009 titled *The Role of Opana ER in the Management of Moderate to Severe Chronic Pain* relies on the AAPM/APS Guidelines while omitting their disclaimer regarding the lack of evidence for recommending the use of opioids for chronic pain.

iii. FSMB

346. The Federation of State Medical Boards (“FSMB”) is a trade organization representing the various state medical boards in the United States. The state boards that comprise

¹³⁹ CDC Guideline, *supra* note 35, at 2.

the FSMB membership have the power to license doctors, investigate complaints, and discipline physicians.

347. The FSMB finances opioid- and pain-specific programs through grants from Defendants.

348. Since 1998, the FSMB has been developing treatment guidelines for the use of opioids for the treatment of pain. The 1998 version, Model Guidelines for the Use of Controlled Substances for the Treatment of Pain (“1998 Guidelines”) was produced “in collaboration with pharmaceutical companies.” The 1998 Guidelines that the pharmaceutical companies helped author taught not that opioids could be appropriate in only limited cases after other treatments had failed, but that opioids were “essential” for treatment of chronic pain, including as a first prescription option.

349. Both a 2004 iteration of the 1998 Guidelines and the 2007 book, *Responsible Opioid Prescribing*, made the same claims as did the 1998 Guidelines. These guidelines were posted online and were available to and intended to reach physicians nationwide, including in Cuyahoga County.

350. FSMB’s 2007 publication *Responsible Opioid Prescribing* was backed largely by drug manufacturers, including Purdue, Endo and Cephalon. The publication also received support from the American Pain Foundation and the American Academy of Pain Medicine. The publication was written by Dr. Fishman, and Dr. Fine served on the Board of Advisors. In all, 163,131 copies of *Responsible Opioid Prescribing* were distributed by state medical boards (and through the boards, to practicing doctors). The FSMB website describes the book as “the leading continuing medical education (CME) activity for prescribers of opioid medications.” This publication asserted that opioid therapy to relieve pain and improve function is a legitimate

medical practice for acute and chronic pain of both cancer and non-cancer origins; that pain is under-treated, and that patients should not be denied opioid medications except in light of clear evidence that such medications are harmful to the patient.¹⁴⁰

351. The Marketing Defendants relied on the 1998 Guidelines to convey the alarming message that “under-treatment of pain” would result in official discipline, but no discipline would result if opioids were prescribed as part of an ongoing patient relationship and prescription decisions were documented. FSMB turned doctors’ fear of discipline on its head: doctors, who used to believe that they would be disciplined if their patients became addicted to opioids, were taught instead that they would be punished if they failed to prescribe opioids to their patients with chronic pain.

iv. The Alliance for Patient Access

352. Founded in 2006, the Alliance for Patient Access (“APA”) is a self-described patient advocacy and health professional organization that styles itself as “a national network of physicians dedicated to ensuring patient access to approved therapies and appropriate clinical care.”¹⁴¹ It is run by Woodberry Associates LLC, a lobbying firm that was also established in 2006.¹⁴² As of June 2017, the APA listed 30 “Associate Members and Financial Supporters.” The list includes Johnson & Johnson, Endo, Mallinckrodt, Purdue and Cephalon.

¹⁴⁰ Scott M. Fishman, *Responsible Opioid Prescribing: A Physician’s Guide* 8-9 (2007).

¹⁴¹ *About AfPA*, The All. for Patient Access, <http://allianceforpatientaccess.org/about-afpa/> (last visited Apr. 25, 2018). References herein to APA include two affiliated groups: the Global Alliance for Patient Access and the Institute for Patient Access.

¹⁴² Mary Chris Jaklevic, *Non-Profit Alliance for Patient Access Uses Journalists and Politicians to Push Big Pharma’s Agenda*, Health News Review (Oct. 2, 2017), <https://www.healthnewsreview.org/2017/10/non-profit-alliance-patient-access-uses-journalists-politicians-push-big-pharmas-agenda/> (hereinafter “Jaklevic, *Non-Profit Alliance for Patient Access*”).

353. APA's board members have also directly received substantial funding from pharmaceutical companies.¹⁴³ For instance, board vice president Dr. Srinivas Nalamachu ("Nalamachu"), who practices in Kansas, received more than \$800,000 from 2013 through 2015 from pharmaceutical companies—nearly all of it from manufacturers of opioids or drugs that treat opioids' side effects, including from Defendants Endo, Insys, Purdue and Cephalon. Nalamachu's clinic was raided by FBI agents in connection with an investigation of Insys and its payment of kickbacks to physicians who prescribed Subsys.¹⁴⁴ Other board members include Dr. Robert A. Yapundich from North Carolina, who received \$215,000 from 2013 through 2015 from pharmaceutical companies, including payments by Defendants Cephalon and Mallinckrodt; Dr. Jack D. Schim from California, who received more than \$240,000 between 2013 and 2015 from pharmaceutical companies, including Defendants Endo, Mallinckrodt and Cephalon; Dr. Howard Hoffberg from Maryland, who received \$153,000 between 2013 and 2015 from pharmaceutical companies, including Defendants Endo, Purdue, Insys, Mallinckrodt and Cephalon; and Dr. Robin K. Dore from California, who received \$700,000 between 2013 and 2015 from pharmaceutical companies.

354. Among its activities, APA issued a "white paper" titled "Prescription Pain Medication: Preserving Patient Access While Curbing Abuse."¹⁴⁵ Among other things, the white

¹⁴³ All information concerning pharmaceutical company payments to doctors in this paragraph is from ProPublica's Dollars for Docs database, <https://projects.propublica.org/docdollars/>.

¹⁴⁴ Andy Marso, *FBI Seizes Records of Overland Park Pain Doctor Tied to Insys*, Kansas City Star (July 20, 2017), <http://www.kansascity.com/news/business/health-care/article162569383.html>.

¹⁴⁵ Pain Therapy Access Physicians Working Group, *Prescription Pain Medication: Preserving Patient Access while Curbing Abuse*, (Dec. 2013), http://1yh21u3cjptv3xjder1dco9mx5s.wpengine.netdna-cdn.com/wp-content/uploads/2013/12/PT_White-Paper_Finala.pdf.

paper criticizes prescription monitoring programs, purporting to express concern that they are burdensome, not user friendly, and of questionable efficacy:

Prescription monitoring programs that are difficult to use and cumbersome can place substantial burdens on physicians and their staff, ultimately leading many to stop prescribing pain medications altogether. This forces patients to seek pain relief medications elsewhere, which may be much less convenient and familiar and may even be dangerous or illegal.

* * *

In some states, physicians who fail to consult prescription monitoring databases before prescribing pain medications for their patients are subject to fines; those who repeatedly fail to consult the databases face loss of their professional licensure. Such penalties seem excessive and may inadvertently target older physicians in rural areas who may not be facile with computers and may not have the requisite office staff. Moreover, threatening and fining physicians in an attempt to induce compliance with prescription monitoring programs represents a system based on punishment as opposed to incentives. . . .

We cannot merely assume that these programs will reduce prescription pain medication use and abuse.¹⁴⁶

355. The white paper also purports to express concern about policies that have been enacted in response to the prevalence of pill mills:

Although well intentioned, many of the policies designed to address this problem have made it difficult for legitimate pain management centers to operate. For instance, in some states, [pain management centers] must be owned by physicians or professional corporations, must have a Board certified medical director, may need to pay for annual inspections, and are subject to increased record keeping and reporting requirements. . . . [I]t is not even certain that the regulations are helping prevent abuses.¹⁴⁷

¹⁴⁶ *Id.* at 4-5

¹⁴⁷ *Id.* at 5-6.

356. In addition, in an echo of earlier industry efforts to push back against what they termed “opiophobia,” the white paper laments the stigma associated with prescribing and taking pain medication:

Both pain patients and physicians can face negative perceptions and outright stigma. When patients with chronic pain can’t get their prescriptions for pain medication filled at a pharmacy, they may feel like they are doing something wrong – or even criminal. . . . Physicians can face similar stigma from peers. Physicians in non-pain specialty areas often look down on those who specialize in pain management – a situation fueled by the numerous regulations and fines that surround prescription pain medications.¹⁴⁸

357. In conclusion, the white paper states that “[p]rescription pain medications, and specifically the opioids, can provide substantial relief for people who are recovering from surgery, afflicted by chronic painful diseases, or experiencing pain associated with other conditions that does not adequately respond to over-the-counter drugs.”¹⁴⁹

358. The APA also issues “Patient Access Champion” financial awards to members of Congress, including 50 such awards in 2015. The awards were funded by a \$7.8 million donation from unnamed donors. While the awards are ostensibly given for protecting patients’ access to Medicare, and are thus touted by their recipients as demonstrating a commitment to protecting the rights of senior citizens and the middle class, they appear to be given to provide cover to and reward members of Congress who have supported the APA’s agenda.¹⁵⁰

359. The APA also lobbies Congress directly. In 2015, the APA signed onto a letter supporting legislation proposed to limit the ability of the DEA to police pill mills by enforcing

¹⁴⁸ *Id.* at 6.

¹⁴⁹ *Id.* at 7.

¹⁵⁰ Jaklevic, *Non-Profit Alliance for Patient Access*, *supra* note 139

the “suspicious orders” provision of the Comprehensive Drug Abuse Prevention and Control Act of 1970, 21 U.S.C. §801 *et seq.* (“CSA” or “Controlled Substances Act”). The AAPM is also a signatory to this letter. An internal U.S. Department of Justice (“DOJ”) memo stated that the proposed bill ““could actually result in increased diversion, abuse, and public health and safety consequences””¹⁵¹ and, according to DEA chief administrative law judge John J. Mulrooney (“Mulrooney”), the law would make it “all but logically impossible” to prosecute manufacturers and distributors, like the defendants here, in the federal courts.¹⁵² The bill passed both houses of Congress and was signed into law in 2016.

v. The U.S. Pain Foundation (“USPF”)

360. The USPF was another Front Group with systematic connections and interpersonal relationships with the Marketing Defendants. The USPF was one of the largest recipients of contributions from the Marketing Defendants, collecting nearly \$3 million in payments between 2012 and 2015 alone.¹⁵³ The USPF was also a critical component of the Marketing Defendants’ lobbying efforts to reduce the limits on over-prescription. The U.S. Pain Foundation advertises its ties to the Marketing Defendants, listing opioid manufacturers like Pfizer, Teva, Depomed, Endo, Purdue, McNeil (i.e. Janssen), and Mallinckrodt as “Platinum,”

¹⁵¹ Bill Whitaker, *Ex-DEA Agent: Opioid Crisis Fueled by Drug Industry and Congress*, CBS News (Oct. 17, 2017), <https://www.cbsnews.com/news/ex-dea-agent-opioid-crisis-fueled-by-drug-industry-and-congress/> (hereinafter, “Whitaker, Opioid Crisis Fueled by Drug Industry”).

¹⁵³ *Fueling an Epidemic*, *supra* note 128 at 4.

“Gold,” and “Basic” corporate members.¹⁵⁴ Industry Front Groups like the American Academy of Pain Management, the American Academy of Pain Medicine, the American Pain Society, and PhRMA are also members of varying levels in the USPF.

vi. American Geriatrics Society (“AGS”)

361. The AGS was another Front Group with systematic connections and interpersonal relationships with the Marketing Defendants. The AGS was a large recipient of contributions from the Marketing Defendants, including Endo, Purdue and Janssen. AGS contracted with Purdue, Endo and Janssen to disseminate guidelines regarding the use of opioids for chronic pain in 2002 (The Management of Persistent Pain in Older Persons, hereinafter “2002 AGS Guidelines”) and 2009 (Pharmacological Management of Persistent Pain in Older Persons,¹⁵⁵ hereinafter “2009 AGS Guidelines”). According to news reports, AGS has received at least \$344,000 in funding from opioid manufacturers since 2009.¹⁵⁶ AGS’s complicity in the common purpose with the Marketing Defendants is evidenced by the fact that AGS internal discussions in August 2009 reveal that it did not want to receive-up front funding from drug companies, which would suggest drug company influence, but would instead accept commercial support to disseminate pro-opioid publications.

362. The 2009 AGS Guidelines recommended that “[a]ll patients with moderate to severe pain . . . should be considered for opioid therapy.” The panel made “strong

¹⁵⁴ *Id.* at 12; *see also* Transparency, U.S. Pain Foundation, <https://uspainfoundation.org/transparency/> (last visited Mar. 9, 2018).

¹⁵⁵ *Pharmacological Management of Persistent Pain in Older Persons*, 57 J. Am. Geriatrics Soc’y 1331, 1339, 1342 (2009), <https://www.nhqualitycampaign.org/files/AmericanGeriatricSociety-PainGuidelines2009.pdf> (last accessed on March 9, 2018).

¹⁵⁶ John Fauber & Ellen Gabler, *Narcotic Painkiller Use Booming Among Elderly*, *Milwaukee J. Sentinel* (May 30, 2012.)

recommendations” in this regard despite “low quality of evidence” and concluded that the risk of addiction is manageable for patients, even with a prior history of drug abuse.¹⁵⁷ These Guidelines further recommended that “the risks [of addiction] are exceedingly low in older patients with no current or past history of substance abuse.” These recommendations are not supported by any study or other reliable scientific evidence. Nevertheless, they have been cited as many as 1,833 times in Google Scholar (which allows users to search scholarly publications that would have been relied on by researchers and prescribers) since their 2009 publication and as recently as this year.

363. Representatives of the Marketing Defendants, often at informal meetings at conferences, suggested activities, lobbying efforts and publications for AGS to pursue. AGS then submitted grant proposals seeking to fund these activities and publications, knowing that drug companies would support projects conceived as a result of these communications.

364. Members of AGS Board of Directors were doctors who were on the Marketing Defendants’ payrolls, either as consultants or speakers at medical events. As described below, many of the KOLs also served in leadership positions within the AGS.

b. The Marketing Defendants Paid Key Opinion Leaders to Deceptively Promote Opioid Use

365. To falsely promote their opioids, the Marketing Defendants paid and cultivated a select circle of doctors who were chosen and sponsored by the Marketing Defendants for their supportive messages. As set forth below, pro-opioid doctors have been at the hub of the Marketing Defendants’ well-funded, pervasive marketing scheme since its inception and were used to create the grave misperception that science and respected medical professionals favored

¹⁵⁷ 2009 AGS Guidelines, *supra* note 159, at 1342.

the broader use of opioids. These doctors include Dr. Russell Portenoy, Dr. Lynn Webster, Dr. Perry Fine, and Dr. Scott Fishman, as set forth below.

366. Although these KOLs were funded by the Marketing Defendants, the KOLs were used extensively to present the appearance that unbiased and reliable medical research supporting the broad use of opioid therapy for chronic pain had been conducted and was being reported on by independent medical professionals.

367. As the Marketing Defendants' false marketing scheme picked up steam, these pro-opioid KOLs wrote, consulted on, edited, and lent their names to books and articles, and gave speeches and CMEs supportive of opioid therapy for chronic pain. They served on committees that developed treatment guidelines that strongly encouraged the use of opioids to treat chronic pain and they were placed on boards of pro-opioid advocacy groups and professional societies that develop, select, and present CMEs.

368. Through use of their KOLs and strategic placement of these KOLs throughout every critical distribution channel of information within the medical community, the Marketing Defendants were able to exert control of each of these modalities through which doctors receive their information.

369. In return for their pro-opioid advocacy, the Marketing Defendants' KOLs received money, prestige, recognition, research funding, and avenues to publish. For example, Dr. Webster has received funding from Endo, Purdue, and Cephalon. Dr. Fine has received funding from Janssen, Cephalon, Endo, and Purdue.

370. The Marketing Defendants carefully vetted their KOLs to ensure that they were likely to remain on-message and supportive of the Marketing Defendants' agenda. The Marketing Defendants also kept close tabs on the content of the materials published by these

KOLs. And, of course, the Marketing Defendants kept these KOLs well-funded to enable them to push the Marketing Defendants' deceptive message out to the medical community.

371. Once the Marketing Defendants identified and funded KOLs and those KOLs began to publish "scientific" papers supporting the Marketing Defendants' false position that opioids were safe and effective for treatment of chronic pain, the Marketing Defendants poured significant funds and resources into a marketing machine that widely cited and promoted their KOLs and studies or articles by their KOLs to drive prescription of opioids for chronic pain. The Marketing Defendants cited to, distributed, and marketed these studies and articles by their KOLs as if they were independent medical literature so that it would be well-received by the medical community. By contrast, the Marketing Defendants did not support, acknowledge, or disseminate the truly independent publications of doctors critical of the use of chronic opioid therapy.

372. In their promotion of the use of opioids to treat chronic pain, the Marketing Defendants' KOLs knew that their statements were false and misleading, or they recklessly disregarded the truth in doing so, but they continued to publish their misstatements to benefit themselves and the Marketing Defendants.

i. Dr. Russell Portenoy

373. In 1986, Dr. Russell Portenoy, who later became Chairman of the Department of Pain Medicine and Palliative Care at Beth Israel Medical Center in New York while at the same time serving as a top spokesperson for drug companies, published an article reporting that "[f]ew

substantial gains in employment or social function could be attributed to the institution of opioid therapy.”¹⁵⁸

374. Writing in 1994, Dr. Portenoy described the prevailing attitudes regarding the dangers of long-term use of opioids:

*The traditional approach to chronic non-malignant pain does not accept the long-term administration of opioid drugs. This perspective has been justified by the perceived likelihood of tolerance, which would attenuate any beneficial effects over time, and the potential for side effects, worsening disability, and addiction. According to conventional thinking, the initial response to an opioid drug may appear favorable, with partial analgesia and salutary mood changes, but adverse effects inevitably occur thereafter. It is assumed that the motivation to improve function will cease as mental clouding occurs and the belief takes hold that the drug can, by itself, return the patient to a normal life. Serious management problems are anticipated, including difficulty in discontinuing a problematic therapy and the development of drug seeking behavior induced by the desire to maintain analgesic effects, avoid withdrawal, and perpetuate reinforcing psychic effects. There is an implicit assumption that little separates these outcomes from the highly aberrant behaviors associated with addiction.*¹⁵⁹

According to Dr. Portenoy, the foregoing problems could constitute “compelling reasons to reject long-term opioid administration as a therapeutic strategy in all but the most desperate cases of chronic nonmalignant pain.”¹⁶⁰

375. Despite having taken this position on long-term opioid treatment, Dr. Portenoy ended up becoming a spokesperson for Purdue and other Marketing Defendants, promoting the

¹⁵⁸ R. Portenoy & K. Foley, *Chronic Use of Opioid Analgesics in Non-Malignant Pain: Report of 38 cases*, 25(2) Pain 171 (1986).

¹⁶⁰ *Id.*

use of prescription opioids and minimizing their risks. A respected leader in the field of pain treatment, Dr. Portenoy was highly influential. Dr. Andrew Kolodny, cofounder of Physicians for Responsible Opioid Prescribing, described him “lecturing around the country as a religious-like figure. The megaphone for Portenoy is Purdue, which flies in people to resorts to hear him speak. It was a compelling message: ‘Docs have been letting patients suffer; nobody really gets addicted; it’s been studied.’”¹⁶¹

376. As one organizer of CME seminars who worked with Portenoy and Purdue pointed out, “had Portenoy not had Purdue’s money behind him, he would have published some papers, made some speeches, and his influence would have been minor. With Purdue’s millions behind him, his message, which dovetailed with their marketing plans, was hugely magnified.”¹⁶²

377. Dr. Portenoy was also a critical component of the Marketing Defendants’ control over their Front Groups. Specifically, Dr. Portenoy sat as a Director on the board of the APF. He was also the President of the APS.

378. In recent years, some of the Marketing Defendants’ KOLs have conceded that many of their past claims in support of opioid use lacked evidence or support in the scientific literature.¹⁶³ Dr. Portenoy has now admitted that he minimized the risks of opioids, and that he

¹⁶¹ Sam Quinones, *Dreamland: The True Tale of America’s Opiate Epidemic* 314 (Bloomsbury Press 2015).

¹⁶² *Id.* at 136.

¹⁶³ See, e.g., John Fauber, *Painkiller Boom Fueled by Networking*, Journal Sentinel (Feb. 18, 2012), <http://archive.jsonline.com/watchdog/watchdogreports/painkiller-boom-fueled-by-networking-dp3p2rn-139609053.html/> (reporting that a key Endo KOL acknowledged that opioid marketing went too far).

“gave innumerable lectures in the late 1980s and ‘90s about addiction that weren’t true.”¹⁶⁴ He mused, “Did I teach about pain management, specifically about opioid therapy, in a way that reflects misinformation? Well, against the standards of 2012, I guess I did . . .”¹⁶⁵

379. In a 2011 interview released by Physicians for Responsible Opioid Prescribing, Portenoy stated that his earlier work purposefully relied on evidence that was not “real” and left real evidence behind:

I gave so many lectures to primary care audiences in which the Porter and Jick article was just one piece of data that I would then cite, and I would cite six, seven, maybe ten different avenues of thought or avenues of evidence, *none of which represented real evidence*, and yet what I was trying to do was to create a narrative so that the primary care audience would look at this information in [total] and feel more comfortable about opioids in a way they hadn’t before. *In essence this was education to destigmatize [opioids], and because the primary goal was to destigmatize, we often left evidence behind.*¹⁶⁶

380. Several years earlier, when interviewed by journalist Barry Meier for his 2003 book, *Pain Killer*, Dr. Portenoy was more direct: “It was pseudoscience. I guess I’m going to have always to live with that one.”¹⁶⁷

ii. Dr. Lynn Webster

381. Another KOL, Dr. Lynn Webster, was the co-founder and Chief Medical Director of the Lifetree Clinical Research & Pain Clinic in Salt Lake City, Utah. Dr. Webster was

¹⁶⁷ Meier, *supra* note 18, at 277.

President in 2013 and is a current board member of AAPM, a Front Group that ardently supports chronic opioid therapy. He is a Senior Editor of *Pain Medicine*, the same journal that published Endo's special advertising supplements touting Opana ER. Dr. Webster was the author of numerous CMEs sponsored by Cephalon, Endo, and Purdue. At the same time, Dr. Webster was receiving significant funding from Defendants (including nearly \$2 million from Cephalon).

382. Dr. Webster created and promoted the Opioid Risk Tool, a five question, one-minute screening tool relying on patient self-reports that purportedly allows doctors to manage the risk that their patients will become addicted to or abuse opioids. The claimed ability to pre-sort patients likely to become addicted is an important tool in giving doctors confidence to prescribe opioids long-term, and for this reason, references to screening appear in various industry-supported guidelines. Versions of Dr. Webster's Opioid Risk Tool ("ORT") appear on, or are linked to, websites run by Endo, Janssen, and Purdue. In 2011, Dr. Webster presented, via webinar, a program sponsored by Purdue titled, *Managing Patient's Opioid Use: Balancing the Need and the Risk*. Dr. Webster recommended use of risk screening tools, urine testing, and patient agreements to prevent "overuse of prescriptions" and "overdose deaths." This webinar was available to and was intended to reach doctors in Cuyahoga County.

383. Dr. Webster was himself tied to numerous overdose deaths. He and the Lifetree Clinic were investigated by the DEA for overprescribing opioids after twenty patients died from overdoses. In keeping with the Marketing Defendants' promotional messages, Dr. Webster apparently believed the solution to patients' tolerance or addictive behaviors was more opioids: he prescribed staggering quantities of pills.

384. At an AAPM annual meeting held February 22 through 25, 2006, Cephalon sponsored a presentation by Webster and others titled, "Open-label study of fentanyl effervescent

buccal tablets in patients with chronic pain and breakthrough pain: Interim safety results.” The presentation’s agenda description states: “Most patients with chronic pain experience episodes of breakthrough pain, yet no currently available pharmacologic agent is ideal for its treatment.” The presentation purports to cover a study analyzing the safety of a new form of fentanyl buccal tablets in the chronic pain setting and promises to show the “[i]nterim results of this study suggest that FEBT is safe and well-tolerated in patients with chronic pain and BTP.” This CME effectively amounted to off-label promotion of Cephalon’s opioids—the only drugs in this category—for chronic pain, even though they were approved only for cancer pain.

385. Cephalon sponsored a CME written by Dr. Webster, *Optimizing Opioid Treatment for Breakthrough Pain*, offered by Medscape, LLC from September 28, 2007 through December 15, 2008. The CME taught that non-opioid analgesics and combination opioids containing non-opioids such as aspirin and acetaminophen are less effective at treating breakthrough pain because of dose limitations on the non-opioid component.

iii. Dr. Perry Fine

386. Dr. Perry Fine’s ties to the Marketing Defendants have been well documented. He has authored articles and testified in court cases and before state and federal committees, and he, too, has argued against legislation restricting high-dose opioid prescription for non-cancer patients. He has served on Purdue’s advisory board, provided medical legal consulting for Janssen, and participated in CME activities for Endo, along with serving in these capacities for several other drug companies. He co-chaired the APS-AAPM Opioid Guideline Panel, served as

treasurer of the AAPM from 2007 to 2010 and as president of that group from 2011 to 2013, and was also on the board of directors of APF.¹⁶⁸

387. Multiple videos feature Fine delivering educational talks about prescription opioids. He even testified at trial that the 1,500 pills a month prescribed to celebrity Anna Nicole Smith for pain did not make her an addict before her death.

388. He has also acknowledged having failed to disclose numerous conflicts of interest. For example, Dr. Fine failed to fully disclose payments received as required by his employer, the University of Utah—telling the university that he had received under \$5,000 in 2010 from Johnson & Johnson for providing “educational” services, but Johnson & Johnson’s website states that the company paid him \$32,017 for consulting, promotional talks, meals and travel that year.¹⁶⁹

389. Dr. Fine and Dr. Portenoy co-wrote *A Clinical Guide to Opioid Analgesia*, in which they downplayed the risks of opioid treatment, such as respiratory depression and addiction:

At clinically appropriate doses, . . . respiratory rate typically does not decline. Tolerance to the respiratory effects usually develops quickly, and doses can be steadily increased without risk.

Overall, the literature provides evidence that the outcomes of drug abuse and addiction are rare among patients who receive opioids for a short period (i.e., for acute pain) and among those with no

¹⁶⁸ Scott M. Fishman, , *Incomplete Financial Disclosures in a Letter on Reducing Opioid Abuse and Diversion*, 306 (13) JAMA 1445 (Sept. 20, 2011), <https://jamanetwork.com/journals/jama/article-abstract/1104464?redirect=true> (hereinafter, “Fishman”).

¹⁶⁹ Tracy Weber & Charles Ornstein, *Two Leaders in Pain Treatment Have Long Ties to Drug Industry*, ProPublica (Dec. 23, 2011, 9:14 AM), <https://www.propublica.org/article/two-leaders-in-pain-treatment-have-long-ties-to-drug-industry> (hereinafter, “Weber”).

history of abuse who receive long-term therapy for medical indications.¹⁷⁰

390. In November 2010, Dr. Fine and others published an article presenting the results of another Cephalon-sponsored study titled “Long-Term Safety and Tolerability of Fentanyl Buccal Tablet for the Treatment of Breakthrough Pain in Opioid-Tolerant Patients with Chronic Pain: An 18-Month Study.”¹⁷¹ In that article, Dr. Fine explained that the 18-month “open-label” study “assessed the safety and tolerability of FBT [Fentora] for the [long-term] treatment of BTP in a large cohort . . . of opioid-tolerant patients receiving around-the-clock . . . opioids for noncancer pain.” The article acknowledged that: (a) “[t]here has been a steady increase in the use of opioids for the management of chronic noncancer pain over the past two decades”; (b) the “widespread acceptance” had led to the publishing of practice guidelines “to provide evidence- and consensus-based recommendations for the optimal use of opioids in the management of chronic pain”; and (c) those guidelines lacked “data assessing the long-term benefits and harms of opioid therapy for chronic pain.”¹⁷²

391. The article concluded: “[T]he safety and tolerability profile of FBT in this study was generally typical of a potent opioid. The [adverse events] observed were, in most cases, predictable, manageable, and tolerable.” They also conclude that the number of abuse-related events was “small.”¹⁷³

¹⁷⁰ Perry G. Fine, & Russell K. Portenoy, *A Clinical Guide to Opioid Analgesia* 20 and 34, McGraw-Hill Companies, 2004, at 20, 34

¹⁷² *Id.* at 748.

¹⁷³ *Id.* at 759.

392. Multiple videos feature Dr. Fine delivering educational talks about the drugs. In one video from 2011 titled “Optimizing Opioid Therapy,” he sets forth a “Guideline for Chronic Opioid Therapy” discussing “opioid rotation” (switching from one opioid to another) not only for cancer patients, but for non-cancer patients, and suggests it may take four or five switches over a person’s “lifetime” to manage pain.¹⁷⁴ He states the “goal is to improve effectiveness which is different from efficacy and safety.” Rather, for chronic pain patients, effectiveness “is a balance of therapeutic good and adverse events *over the course of years*.” The entire program assumes that opioids are appropriate treatment over a “protracted period of time” and even over a patient’s entire “lifetime.” He even suggests that opioids can be used to treat *sleep apnea*. He further states that the associated risks of addiction and abuse can be managed by doctors and evaluated with “tools,” but leaves that for “a whole other lecture.”¹⁷⁵

iv. Dr. Scott Fishman

393. Dr. Scott Fishman is a physician whose ties to the opioid drug industry are legion. He has served as an APF board member and as president of the AAPM, and has participated yearly in numerous CME activities for which he received “market rate honoraria.” As discussed below, he has authored publications, including the seminal guides on opioid prescribing, which were funded by the Marketing Defendants. He has also worked to oppose legislation requiring doctors and others to consult pain specialists before prescribing high doses of opioids to non-cancer patients. He has himself acknowledged his failure to disclose all potential conflicts of

¹⁷⁴ Perry A. Fine, *Safe and Effective Opioid Rotation*, YouTube (Nov. 8, 2012), https://www.youtube.com/watch?v=_G3II9yqgXI.

¹⁷⁵ *Id.*

interest in a letter in the *Journal of the American Medical Association* titled “Incomplete Financial Disclosures in a Letter on Reducing Opioid Abuse and Diversion.”¹⁷⁶

394. Dr. Fishman authored a physician’s guide on the use of opioids to treat chronic pain titled “Responsible Opioid Prescribing,” in 2007 which promoted the notion that long-term opioid treatment was a viable and safe option for treating chronic pain.

395. In 2012, Dr. Fishman updated the guide and continued emphasizing the “catastrophic” “under-treatment” of pain and the “crisis” such under-treatment created:

Given the magnitude of the problems related to opioid analgesics, it can be tempting to resort to draconian solutions: clinicians may simply stop prescribing opioids, or legislation intended to improve pharmacovigilance may inadvertently curtail patient access to care. As we work to reduce diversion and misuse of prescription opioids, it’s critical to remember that the problem of unrelieved pain remains as urgent as ever.¹⁷⁷

396. The updated guide still assures that “[o]pioid therapy to relieve pain and improve function is legitimate medical practice for acute and chronic pain of both cancer and noncancer origins.”¹⁷⁸

397. In another guide by Dr. Fishman, he continues to downplay the risk of addiction: “I believe clinicians must be very careful with the label ‘addict.’ I draw a distinction between a ‘chemical coper’ and an addict.”¹⁷⁹ The guide also continues to present symptoms of addiction as symptoms of “pseudoaddiction.”

c. **The Marketing Defendants Disseminated Their Misrepresentations Through Continuing Medical Education Programs**

398. Now that the Marketing Defendants had both a group of physician promoters and had built a false body of “literature,” Marketing Defendants needed to make sure their false marketing message was widely distributed.

399. One way the Marketing Defendants aggressively distributed their false message was through thousands of Continuing Medical Education courses (“CMEs”).

400. A CME is a professional education program provided to doctors. Doctors are required to attend a certain number and, often, type of CME programs each year as a condition of their licensure. These programs are delivered in person, often in connection with professional organizations’ conferences, and online, or through written publications. Doctors rely on CMEs not only to satisfy licensing requirements, but also to get information on new developments in medicine or to deepen their knowledge in specific areas of practice. Because CMEs typically are taught by KOLs who are highly respected in their fields, and are thought to reflect these physicians’ medical expertise, they can be especially influential with doctors.

401. The countless doctors and other health care professionals who participate in accredited CMEs constitute an enormously important audience for opioid reeducation. As one target, Marketing Defendants aimed to reach general practitioners, whose broad area of practice and lack of expertise and specialized training in pain management made them particularly dependent upon CMEs and, as a result, especially susceptible to the Marketing Defendants’ deceptions.

402. The Marketing Defendants sponsored CMEs that were delivered thousands of times, promoting chronic opioid therapy and supporting and disseminating the deceptive and biased messages described in this Complaint. These CMEs, while often generically titled to

relate to the treatment of chronic pain, focus on opioids to the exclusion of alternative treatments, inflate the benefits of opioids, and frequently omit or downplay their risks and adverse effects.

403. Cephalon sponsored numerous CME programs, which were made widely available through organizations like Medscape, LLC (“Medscape”) and which disseminated false and misleading information to physicians across the country.

404. Another Cephalon-sponsored CME presentation titled *Breakthrough Pain: Treatment Rationale with Opioids* was available on Medscape starting September 16, 2003 and was given by a self-professed pain management doctor who “previously operated back, complex pain syndromes, the neuropathies, and interstitial cystitis.” He describes the pain process as a non-time-dependent continuum that requires a balanced analgesia approach using “targeted pharmacotherapeutics to affect multiple points in the pain-signaling pathway.”¹⁸⁰ The doctor lists fentanyl as one of the most effective opioids available for treating breakthrough pain, describing its use as an expected and normal part of the pain management process. Nowhere in the CME is cancer or cancer-related pain even mentioned, despite FDA restrictions that fentanyl use be limited to cancer-related pain.

405. Teva paid to have a CME it sponsored, *Opioid-Based Management of Persistent and Breakthrough Pain*, published in a supplement of Pain Medicine News in 2009. The CME instructed doctors that “clinically, broad classification of pain syndromes as either cancer- or noncancer-related has limited utility” and recommended Actiq and Fentora for patients with chronic pain. The CME is still available online.

¹⁸⁰ Daniel S. Bennett, *Breakthrough Pain: Treatment Rationale with Opioids*, Medscape (Sept. 16, 2003) <http://www.medscape.org/viewarticle/461612>.

406. *Responsible Opioid Prescribing* was sponsored by Purdue, Endo and Teva. The FSMB website described it as the “leading continuing medical education (CME) activity for prescribers of opioid medications.” Endo sales representatives distributed copies of *Responsible Opioid Prescribing* with a special introductory letter from Dr. Scott Fishman.

407. In all, more than 163,000 copies of *Responsible Opioid Prescribing* were distributed nationally.

408. The American Medical Association (“AMA”) recognized the impropriety that pharmaceutical company-funded CMEs creates; stating that support from drug companies with a financial interest in the content being promoted “creates conditions in which external interests could influence the availability and/or content” of the programs and urges that “[w]hen possible, CME[s] should be provided without such support or the participation of individuals who have financial interests in the education subject matter.”¹⁸¹

409. Physicians attended or reviewed CMEs sponsored by the Marketing Defendants during the relevant time period and were misled by them.

410. By sponsoring CME programs put on by Front Groups like APF, AAPM, and others, the Marketing Defendants could expect instructors to deliver messages favorable to them, as these organizations were dependent on the Marketing Defendants for other projects. The sponsoring organizations honored this principle by hiring pro-opioid KOLs to give talks that supported chronic opioid therapy. Marketing Defendant-driven content in these CMEs had a direct and immediate effect on prescribers’ views on opioids. Producers of CMEs and the Marketing Defendants both measure the effects of CMEs on prescribers’ views on opioids and

¹⁸¹ Opinion 9.0115, *Financial Relationships with Industry in CME*, Am. Med. Ass’n (Nov. 2011), at 1.

their absorption of specific messages, confirming the strategic marketing purpose in supporting them.

d. The Marketing Defendants Used “Branded” Advertising to Promote Their Products to Doctors and Consumers

411. The Marketing Defendants engaged in widespread advertising campaigns touting the benefits of their branded drugs. The Marketing Defendants published print advertisements in a broad array of medical journals, ranging from those aimed at specialists, such as the *Journal of Pain* and *Clinical Journal of Pain*, to journals with wider medical audiences, such as the *Journal of the American Medical Association*. The Marketing Defendants collectively spent more than \$14 million on the medical journal advertising of opioids in 2011, nearly triple what they spent in 2001. The 2011 total includes \$8.3 million by Purdue, \$4.9 million by Janssen, and \$1.1 million by Endo.

412. The Marketing Defendants also targeted consumers in their advertising. They knew that physicians are more likely to prescribe a drug if a patient specifically requests it.¹⁸² They also knew that this willingness to acquiesce to such patient requests holds true even for opioids and for conditions for which they are not approved.¹⁸³ Endo’s research, for example, also found that such communications resulted in greater patient “brand loyalty,” with longer durations of Opana ER therapy and fewer discontinuations. The Marketing Defendants thus increasingly took their opioid sales campaigns directly to consumers, including through patient-

¹⁸² In one study, for example, nearly 20% of sciatica patients requesting oxycodone received a prescription for it, compared with 1% of those making no specific request. J.B. McKinlay *et al.*, *Effects of Patient Medication Requests on Physician Prescribing Behavior: Results of a Factorial Experiment*, 52(2) Med. Care 294-99 (April 2014).

¹⁸³ *Id.*

focused “education and support” materials in the form of pamphlets, videos, or other publications that patients could view in their physician’s office.

e. **The Marketing Defendants Used “Unbranded” Advertising to Promote Opioid Use for Chronic Pain Without FDA Review**

413. The Marketing Defendants also aggressively promoted opioids through “unbranded advertising” to generally tout the benefits of opioids without specifically naming a particular brand-name opioid drug. Instead, unbranded advertising is usually framed as “disease awareness”—encouraging consumers to “talk to your doctor” about a certain health condition without promoting a specific product and, therefore, without providing balanced disclosures about the product’s limits and risks. In contrast, a pharmaceutical company’s “branded” advertisement that identifies a specific medication and its indication (i.e., the condition which the drug is approved to treat) must also include possible side effects and contraindications—what the FDA Guidance on pharmaceutical advertising refers to as “fair balance.” Branded advertising is also subject to FDA review for consistency with the drug’s FDA-approved label. Through unbranded materials, the Marketing Defendants expanded the overall acceptance of and demand for chronic opioid therapy without the restrictions imposed by regulations on branded advertising.

414. Many of the Marketing Defendants utilized unbranded websites to promote opioid use without promoting a specific branded drug, such as Purdue’s pain-management website, www.inthefaceofpain.com. The website contained testimonials from several dozen “advocates,” including health care providers, urging more pain treatment. The website presented the advocates as neutral and unbiased, but an investigation by the New York Attorney General later revealed that Purdue paid the advocates hundreds of thousands of dollars.

f. **The Marketing Defendants Funded, Edited And Distributed Publications That Supported Their Misrepresentations**

415. The Marketing Defendants created a body of false, misleading, and unsupported medical and popular literature about opioids that (a) understated the risks and overstated the benefits of long-term use; (b) appeared to be the result of independent, objective research; and (c) was likely to shape the perceptions of prescribers, patients, and payors. This literature served marketing goals, rather than scientific standards, and was intended to persuade doctors and consumers that the benefits of long-term opioid use outweighed the risks.

416. To accomplish their goal, the Marketing Defendants—sometimes through third-party consultants and/or Front Groups—commissioned, edited, and arranged for the placement of favorable articles in academic journals.

417. The Marketing Defendants' plans for these materials did not originate in the departments with the organizations that were responsible for research, development, or any other area that would have specialized knowledge about the drugs and their effects on patients; rather, they originated in the Marketing Defendants' marketing departments.

418. The Marketing Defendants made sure that favorable articles were disseminated and cited widely in the medical literature, even when the Marketing Defendants knew that the articles distorted the significance or meaning of the underlying study, as with the Porter & Jick letter. The Marketing Defendants also frequently relied on unpublished data or posters, neither of which are subject to peer review, but were presented as valid scientific evidence.

419. The Marketing Defendants published or commissioned deceptive review articles, letters to the editor, commentaries, case-study reports, and newsletters aimed at discrediting or suppressing negative information that contradicted their claims or raised concerns about chronic opioid therapy.

420. For example, in 2007 Cephalon sponsored the publication of an article titled “Impact of Breakthrough Pain on Quality of Life in Patients with Chronic, Noncancer Pain: Patient Perceptions and Effect of Treatment with Oral Transmucosal Fentanyl Citrate,”¹⁸⁴ published in the nationally circulated journal *Pain Medicine*, to support its effort to expand the use of its branded fentanyl products. The article’s authors (including Dr. Lynn Webster, discussed above) stated that the “OTFC [fentanyl] has been shown to relieve BTP more rapidly than conventional oral, normal-release, or ‘short acting’ opioids” and that “[t]he purpose of [the] study was to provide a qualitative evaluation of the effect of BTP on the [quality of life] of noncancer pain patients.” The number-one-diagnosed cause of chronic pain in the patients studied was back pain (44%), followed by musculoskeletal pain (12%) and head pain (7%). The article cites Portenoy and recommends fentanyl for non-cancer BTP patients:

In summary, BTP appears to be a clinically important condition in patients with chronic noncancer pain and is associated with an adverse impact on QoL. This qualitative study on the negative impact of BTP and the potential benefits of BTP-specific therapy suggests several domains that may be helpful in developing BTP-specific, QoL assessment tools.¹⁸⁵

g. The Marketing Defendants Used Detailing to Directly Disseminate Their Misrepresentations to Prescribers

421. The Marketing Defendants’ sales representatives executed carefully crafted marketing tactics, developed at the highest rungs of their corporate ladders, to reach targeted doctors with centrally orchestrated messages. The Marketing Defendants’ sales representatives also distributed third-party marketing material to their target audience that was deceptive.

¹⁸⁴ Donald R. Taylor, *et al.*, *Impact of Breakthrough Pain on Quality of Life in Patients With Chronic, Noncancer Pain: Patient Perceptions and Effect of Treatment With Oral Transmucosal Fentanyl Citrate (OTFC, ACTIQ)*, 8(3) *Pain Med.* 281-88 (Mar. 2007).

¹⁸⁵ *Id.* at 287.

422. Each Marketing Defendant promoted opioids through sales representatives (also called “detailers”) and, upon information and belief, small group speaker programs to reach out to individual prescribers. By establishing close relationships with doctors, the Marketing Defendants were able to disseminate their misrepresentations in targeted, one-on-one settings that allowed them to promote their opioids and to allay individual prescribers’ concerns about prescribing opioids for chronic pain.

423. In accordance with common industry practice, the Marketing Defendants purchase and closely analyze prescription sales data from IMS Health (now IQVIA), a healthcare data collection, management and analytics corporation. This data allows them to track precisely the rates of initial and renewal prescribing by individual doctors, which allows them to target and tailor their appeals. Sales representatives visited hundreds of thousands of doctors and disseminated the misinformation and materials described above.

424. Marketing Defendants devoted and continue to devote massive resources to direct sales contacts with doctors. In 2014 alone, Marketing Defendants spent \$166 million on detailing branded opioids to doctors. This amount is twice as much as Marketing Defendants spent on detailing in 2000. The amount includes \$108 million spent by Purdue, \$34 million by Janssen, \$13 million by Teva, and \$10 million by Endo.

425. Cephalon’s quarterly spending steadily climbed from below \$1 million in 2000 to more than \$3 million in 2014 (and more than \$13 million for the year), with a peak, coinciding with the launch of Fentora, of more than \$27 million in 2007, as shown below:

h. Marketing Defendants Used Speakers' Bureaus and Programs to Spread Their Deceptive Messages

431. In addition to making sales calls, Marketing Defendants' detailers also identified doctors to serve, for payment, on their speakers' bureaus and to attend programs with speakers and meals paid for by the Marketing Defendants. These speaker programs and associated speaker trainings serve three purposes: they provide an incentive to doctors to prescribe, or increase their prescriptions of, a particular drug; to qualify to be selected a forum in which to further market to the speaker himself or herself; and an opportunity to market to the speaker's peers. The Marketing Defendants grade their speakers, and future opportunities are based on speaking performance, post-program sales, and product usage. Purdue, Janssen, Endo, Cephalon, and Mallinckrodt each made thousands of payments to physicians nationwide, for activities including participating on speakers' bureaus, providing consulting services, and other services.

432. As detailed below, Insys paid prescribers for *fake* speakers' programs in exchange for prescribing its product, Subsys. Insys's schemes resulted in countless speakers' programs at which the designated speaker did not speak, and, on many occasions, speaker programs at which the only attendees at the events were the speaker and an Insys sales representative. It was a pay-to-prescribe program.

433. Insys used speakers' programs as a front to pay for prescriptions and paid to push opioids onto patients who did not need them.

3. The Marketing Defendants Targeted Vulnerable Populations

434. The Marketing Defendants specifically targeted their marketing at two vulnerable populations—the elderly and veterans.

435. Elderly patients taking opioids have been found to be exposed to elevated fracture risks, a greater risk for hospitalizations, and increased vulnerability to adverse drug effects and interactions, such as respiratory depression which occurs more frequently in elderly patients.

436. The Marketing Defendants promoted the notion—without adequate scientific foundation—that the elderly are particularly unlikely to become addicted to opioids. The AGS 2009 Guidelines, for example, which Purdue, Endo, and Janssen publicized, described the risk of addiction as “*exceedingly low* in older patients with no current or past history of substance abuse.” (emphasis added). As another example, an Endo-sponsored CME put on by NIPC, *Persistent Pain in the Older Adult*, taught that prescribing opioids to older patients carried “possibly less potential for abuse than in younger patients.” Contrary to these assertions, however, a 2010 study examining overdoses among long-term opioid users found that patients 65 or older were among those with the largest number of serious overdoses.

437. Similarly, Endo targeted marketing of Opana ER towards patients over 55 years old. Such documents show Endo treated Medicare Part D patients among the “most valuable customer segments.”¹⁸⁷ However, in 2013, one pharmaceutical benefits management company recommended against the use of Opana ER for elderly patients and unequivocally concluded: “[f]or patients 65 and older these medications are not safe, so consult your doctor.”

438. According to a study published in the 2013 *Journal of American Medicine*, veterans returning from Iraq and Afghanistan who were prescribed opioids have a higher incidence of adverse clinical outcomes, such as overdoses and self-inflicted and accidental injuries. A 2008 survey showed that prescription drug misuse among military personnel doubled

¹⁸⁷ ENDO-CHI_LIT-00050369, at 8; ENDO-CHI_LIT-00076029, at 6.

from 2002 to 2005, and then nearly tripled again over the next three years. Veterans are twice as likely as non-veterans to die from an opioid overdose.

439. Yet the Marketing Defendants deliberately targeted veterans with deceptive marketing. For example, a 2009 publication sponsored by Purdue, Endo, and Janssen, and distributed by APF with grants from Janssen, and Endo, was written as a personal narrative of one veteran but was in fact another vehicle for opioid promotion. Called *Exit Wounds*, the publication describes opioids as “underused” and the “gold standard of pain medications” while failing to disclose significant risks of opioid use, including the risks of fatal interactions with benzodiazepines. According to a VA Office of Inspector General Report, 92.6% of veterans who were prescribed opioid drugs were also prescribed benzodiazepines, despite the increased danger of respiratory depression from the two drugs together.

440. Opioid prescriptions have dramatically increased for veterans and the elderly. Since 2007, prescriptions for the elderly have grown at twice the rate of prescriptions for adults between the ages of 40 and 59. And in 2009, military doctors wrote 3.8 million prescriptions for narcotic pain pills—four times as many as they did in 2001.

4. Insys Employed Fraudulent, Illegal, and Misleading Marketing Schemes to Promote Subsys

441. Insys’s opioid, Subsys, was approved by the FDA in 2012 for “management of breakthrough pain in adult cancer patients who are already receiving and who are tolerant to around-the-clock opioid therapy for their underlying persistent cancer pain.” Under FDA rules, Insys could only market Subsys for this use. Subsys consists of the highly addictive narcotic, fentanyl, administered via a sublingual (under the tongue) spray, which provides rapid-onset pain relief. It is in the class of drugs described as Transmucosal Immediate-Release Fentanyl (“TIRF”).

442. To reduce the risk of abuse, misuse, and diversion, the FDA instituted a Risk Evaluation and Mitigation Strategy (“REMS”) for Subsys and other TIRF products, such as Cephalon’s Actiq and Fentora. The purpose of REMS was to educate “prescribers, pharmacists, and patients on the potential for misuse, abuse, addiction, and overdose” for this type of drug and to “ensure safe use and access to these drugs for patients who need them.”¹⁸⁸ Prescribers must enroll in the TIRF REMS before writing a prescription for Subsys.

443. Since its launch, Subsys has been an extremely expensive medication, and its price continues to rise each year. Depending on a patient’s dose strength and frequency of use, a month’s supply of Subsys could cost in the thousands of dollars.

444. Due to its high cost, in most instances prescribers must submit Subsys prescriptions to insurance companies or health benefit payors for prior authorization to determine whether they will pay for the drug prior to the patient attempting to fill the prescription. According to the U.S. Senate Homeland Security and Governmental Affairs Committee Minority Staff Report (“Staff Report”), the prior authorization process includes “confirmation that the patient had an active cancer diagnosis, was being treated by an opioid (and, thus, was opioid tolerant), and was being prescribed Subsys to treat breakthrough pain that the other opioid could not eliminate. If any one of these factors was not present, the prior authorization would be denied”¹⁸⁹

445. These prior authorization requirements proved to be daunting. Subsys received reimbursement approval in only approximately 30% of submitted claims. In order to increase approvals, Insys created a prior authorization unit, called the Insys Reimbursement Center

¹⁸⁸ Press Release, *U.S. Food & Drug Admin., FDA Approves Shared System REMS for TIRF Products*, (Dec. 29, 2011.)

¹⁸⁹ *Fueling an Epidemic*, *supra* note 128.

(“IRC”), to obtain approval for Subsys reimbursements. This unit employed a number of fraudulent and misleading tactics to secure reimbursements, including falsifying medical histories of patients, falsely claiming that patients had cancer, and providing misleading information to insurers and payors regarding patients’ diagnoses and medical conditions.

446. Subsys has proved to be extremely profitable for Insys. Insys made approximately \$330 million in net revenue from Subsys last year. Between 2013 and 2016, the value of Insys stock rose 296%.

447. Since its launch in 2012, Insys aggressively worked to grow its profits through fraudulent, illegal, and misleading tactics, including its reimbursement-related fraud. Through its sales representatives and other marketing efforts, Insys deceptively promoted Subsys as safe and appropriate for uses such as neck and back pain, without disclosing the lack of approval or evidence for such uses, and misrepresented the appropriateness of Subsys for treatment of those conditions. It implemented a kickback scheme wherein it paid prescribers for fake speakers’ programs in exchange for prescribing Subsys. All of these fraudulent and misleading schemes had the effect of pushing Insys’s dangerous opioid onto patients who did not need it.

448. Insys incentivized its sales force to engage in illegal and fraudulent conduct. Many of the Insys sales representatives were new to the pharmaceutical industry and their base salaries were low compared to industry standard. The compensation structure was heavily weighted toward commissions and rewarded reps more for selling higher (and more expensive) doses of Subsys, a “highly unusual” practice because most companies consider dosing a patient-specific decision that should be made by a doctor.¹⁹⁰

¹⁹⁰ *Id.*

449. The Insys “speakers program” was perhaps its most widespread and damaging scheme. A former Insys salesman, Ray Furchak, alleged in a qui tam action that the sole purpose of the speakers program was “in the words of his then supervisor Alec Burlakoff, ‘to get money in the doctor’s pocket.’” Furchak went on to explain that “[t]he catch . . . was that doctors who increased the level of Subsys prescriptions, and at higher dosages (such as 400 or 800 micrograms instead of 200 micrograms), would receive the invitations to the program—and the checks.”¹⁹¹ It was a pay-to-prescribe program.

450. Insys’s sham speaker program and other fraudulent and illegal tactics have been outlined in great detail in indictments and guilty pleas of Insys executives, employees, and prescribers across the country, as well as in a number of lawsuits against the company itself.

451. In May of 2015, two Alabama pain specialists were arrested and charged with illegal prescription drug distribution, among other charges. The doctors were the top prescribers of Subsys, though neither were oncologists. According to prosecutors, the doctors received illegal kickbacks from Insys for prescribing Subsys. Both doctors had prescribed Subsys to treat neck, back, and joint pain. In February of 2016, a former Insys sales manager pled guilty to conspiracy to commit health care fraud, including engaging in a kickback scheme in order to induce one of these doctors to prescribe Subsys. The plea agreement states that nearly all of the Subsys prescriptions written by the doctor were off-label to non-cancer patients. In May of 2017, one of the doctors was sentenced to 20 years in prison.

452. In June of 2015, a nurse practitioner in Connecticut described as the state’s highest Medicare prescriber of narcotics, pled guilty to receiving \$83,000 in kickbacks from

¹⁹¹ Roddy Boyd, *Insys Therapeutics and the New ‘Killing It’*, Southern Investigative Reporting Foundation, The Investigator (April 24, 2015), <http://sirf-online.org/2015/04/24/the-new-killing-it/>.

Insys for prescribing Subsys. Most of her patients were prescribed the drug for chronic pain. Insys paid the nurse as a speaker for more than 70 dinner programs at approximately \$1,000 per event; however, she did not give any presentations. In her guilty plea, the nurse admitted receiving the speaker fees in exchange for writing prescriptions for Subsys.

453. In August of 2015, Insys settled a complaint brought by the Oregon Attorney General. In its complaint, the Oregon Department of Justice cited Insys for, among other things, misrepresenting to doctors that Subsys could be used to treat migraine, neck pain, back pain, and other uses for which Subsys is neither safe nor effective, and using speaking fees as kickbacks to incentivize doctors to prescribe Subsys.

454. In August of 2016, the State of Illinois sued Insys for similar deceptive and illegal practices. The Complaint alleged that Insys marketed Subsys to high-volume prescribers of opioid drugs instead of to oncologists whose patients experienced the breakthrough cancer pain for which the drug is indicated. The Illinois Complaint also details how Insys used its speaker program to pay high volume prescribers to prescribe Subsys. The speaker events took place at upscale restaurants in the Chicago area, and Illinois speakers received an “honorarium” ranging from \$700 to \$5,100, and they were allowed to order as much food and alcohol as they wanted. At most of the events, the “speaker” being paid by Insys did not speak, and, on many occasions, the only attendees at the events were the speaker and an Insys sales representative.

455. In December of 2016, six Insys executives and managers were indicted and then, in October 2017, Insys’s founder and owner was arrested and charged with multiple felonies in connection with an alleged conspiracy to bribe practitioners to prescribe Subsys and defraud insurance companies. A U.S. Department of Justice press release explained that, among other things: “Insys executives improperly influenced health care providers to prescribe a powerful

opioid for patients who did not need it, and without complying with FDA requirements, thus putting patients at risk and contributing to the current opioid crisis.”¹⁹² A Drug Enforcement Administration (“DEA”) Special Agent in Charge further explained that: “Pharmaceutical companies whose products include controlled medications that can lead to addiction and overdose have a special obligation to operate in a trustworthy, transparent manner, because their customers’ health and safety and, indeed, very lives depend on it.”¹⁹³

5. The Marketing Defendants’ Scheme Succeeded, Creating a Public Health Epidemic

a. The Marketing Defendants dramatically expanded opioid prescribing and use

456. The Marketing Defendants necessarily expected a return on the enormous investment they made in their deceptive marketing scheme, and worked to measure and expand their success. Their own documents show that they knew they were influencing prescribers and increasing prescriptions. Studies also show that in doing so, they fueled an epidemic of addiction and abuse.

457. Endo, for example directed the majority of its marketing budget to sales representatives—with good results: 84% of its prescriptions were from the doctors they detailed. Moreover, as of 2008, cancer and post-operative pain accounted for only 10% of Opana ER’s uses; virtually all of Endo’s opioid sales—and profits—were from a market that did not exist ten years earlier. Internal emails from Endo staff attributed increases in Opana ER sales to the aggressiveness and persistence of sales representatives. [REDACTED]

¹⁹² Press Release, U.S. Dep’t of Just., U.S. Attorney’s Office, Dist. of Mass., *Founder and Owner of Pharmaceutical Company Insys Arrested and Charged with Racketeering* (Oct. 26, 2017), <https://www.justice.gov/usao-ma/pr/founder-and-owner-pharmaceutical-company-insys-arrested-and-charged-racketeering>.

¹⁹³ *Id.*

458. Cephalon also recognized the return of its efforts to market Actiq and Fentora off-label for chronic pain. In 2000, Actiq generated \$15 million in sales. By 2002, Actiq sales had increased by 92%, which Cephalon attributed to “a dedicated sales force for ACTIQ” and “ongoing changes to [its] marketing approach including hiring additional sales representatives and targeting our marketing efforts to pain specialists.”¹⁹⁴ Actiq became Cephalon’s second best-selling drug. By the end of 2006, Actiq’s sales had exceeded \$500 million.¹⁹⁵ Only 1% of the 187,076 prescriptions for Actiq filled at retail pharmacies during the first six months of 2006 were prescribed by oncologists. One measure suggested that “more than 80 percent of patients who use[d] the drug don’t have cancer.”¹⁹⁶

459. Upon information and belief, each of the Marketing Defendants tracked the impact of their marketing efforts to measure their impact in changing doctors' perceptions and prescribing of their drugs. They purchased prescribing and survey data that allowed them to closely monitor these trends, and they did actively monitor them. For instance, they monitored doctors' prescribing before and after detailing visits, and at various levels of detailing intensity, and before and after speaker programs. Marketing Defendants invested in their aggressive and deceptive marketing for one reason: it worked. As described in this Complaint, both in specific instances and more generally, Defendants' marketing changed prescribers' willingness to

¹⁹⁴ Cephalon, Inc. Annual Report (Form 10-K) at 28 (Mar. 31, 2003), <https://www.sec.gov/Archives/edgar/data/873364/000104746903011137/a2105971z10-k.htm>.

196 *Id.*

prescribe opioids, led them to prescribe more of their opioids, and persuaded them to continue prescribing opioids or to switch to supposedly “safer” opioids, such as ADF.

460. This success would have come as no surprise. Drug company marketing materially impacts doctors’ prescribing behavior.¹⁹⁷ The effects of sales calls on prescribers’ behavior is well documented in the literature, including a 2017 study that found that physicians ordered fewer promoted brand-name medications and prescribed more cost-effective generic versions if they worked in hospitals that instituted rules about when and how pharmaceutical sales representatives were allowed to detail prescribers. The changes in prescribing behavior appeared strongest at hospitals that implemented the strictest detailing policies and included enforcement measures. Another study examined four practices, including visits by sales representatives, medical journal advertisements, direct-to-consumer advertising, and pricing, and found that sales representatives have the strongest effect on drug utilization. An additional study found that doctor meetings with sales representatives are related to changes in both prescribing practices and requests by physicians to add the drugs to hospitals’ formularies.

461. Marketing Defendants spent millions of dollars to market their drugs to prescribers and patients and meticulously tracked their return on that investment. In one recent survey published by the AMA, even though nine in ten general practitioners reported

¹⁹⁷ Puneet Manchanda & Pradeep K. Chintagunta, *Responsiveness of Physician Prescription Behavior to Salesforce Effort: An Individual Level Analysis*, 15 (2-3) Mktg. Letters 129-145 (2004) (detailing has a positive impact on prescriptions written); Ian. Larkin, et al. *Restrictions on Pharmaceutical Detailing Reduced Off-Label Prescribing of Antidepressants and Antipsychotics in Children*, 33(6) Health Affairs 1014 (2014) (finding academic medical centers that restricted direct promotion by pharmaceutical sales representatives resulted in a 34% decline in on-label use of promoted drugs); see also Art Van Zee, *The Promotion and Marketing of OxyContin: Commercial Triumph, Public Health Tragedy*, 99(2) Am J. Pub. Health 221-27 (2009) (correlating an increase of OxyContin prescriptions from 670,000 annually in 1997 to 6.2 million in 2002 to a doubling of Purdue’s sales force and trebling of annual sales calls).

prescription drug abuse to be a moderate to large problem in their communities, 88% of the respondents said they were confident in their prescribing skills, and nearly half were comfortable using opioids for chronic non-cancer pain.¹⁹⁸ These results are directly due to the Marketing Defendants' fraudulent marketing campaign focused on several misrepresentations.

462. Thus, both independent studies and Marketing Defendants' own tracking confirm that Defendants' marketing scheme dramatically increased their sales.

b. Marketing Defendants' deception in expanding their market created and fueled the opioid epidemic

463. Independent research demonstrates a close link between opioid prescriptions and opioid abuse. For example, a 2007 study found "a very strong correlation between therapeutic exposure to opioid analgesics, as measured by prescriptions filled, and their abuse."¹⁹⁹ It has been estimated that 60% of the opioids that are abused come, directly or indirectly, through physicians' prescriptions.

464. There is a parallel relationship between the availability of prescription opioid analgesics through legitimate pharmacy channels and the diversion and abuse of these drugs and associated adverse outcomes. The opioid epidemic is "directly related to the increasingly widespread misuse of powerful opioid pain medications."²⁰⁰

<http://www.nejm.org/doi/full/10.1056/NEJMs1601307>

465. In a 2016 report, the CDC explained that “[o]pioid pain reliever prescribing has quadrupled since 1999 and has increased in parallel with [opioid] overdoses.” Patients receiving opioid prescriptions for chronic pain account for the majority of overdoses. For these reasons, the CDC concluded that efforts to rein in the prescribing of opioids for chronic pain are critical “to reverse the epidemic of opioid drug overdose deaths and prevent opioid-related morbidity.”

E. Defendants Throughout the Supply Chain Deliberately Disregarded Their Duties to Maintain Effective Controls and to Identify, Report, and Take Steps to Halt Suspicious Orders

466. The Marketing Defendants created a vastly and dangerously larger market for opioids. All of the Defendants compounded this harm by facilitating the supply of far more opioids that could have been justified to serve that market. The failure of the Defendants to maintain effective controls, and to investigate, report, and take steps to halt orders that they knew or should have known were suspicious breached both their statutory and common law duties.

467. For over a decade, as the Marketing Defendants increased the demand for opioids, all the Defendants aggressively sought to bolster their revenue, increase profit, and grow their share of the prescription painkiller market by unlawfully and surreptitiously increasing the volume of opioids they sold. However, Defendants are not permitted to engage in a limitless expansion of their sales through the unlawful sales of regulated painkillers. Rather, as described below, Defendants are subject to various duties to report the quantity of Schedule II controlled substances in order to monitor such substances and prevent oversupply and diversion into the illicit market.

468. Defendants are all required to register as either manufacturers or distributors pursuant to 21 U.S.C. § 823 and 21 C.F.R. §§ 1301.11, 1301.74.

469. Marketing Defendants’ scheme was resoundingly successful. Chronic opioid therapy—the prescribing of opioids long-term to treat chronic pain—has become a

commonplace, and often first-line, treatment. Manufacturing Defendants' deceptive marketing caused prescribing not only of their opioids, but of opioids as a class, to skyrocket. According to the CDC opioid prescriptions, as measured by number of prescriptions and morphine milligram equivalent ("MME") per person, tripled from 1999 to 2015. In 2015, on an average day, more than 650,000 opioid prescriptions were dispensed in the U.S. While previously a small minority of opioid sales, today between 80% and 90% of opioids (measured by weight) used are for chronic pain. Approximately 20% of the population between the ages of 30 and 44, and nearly 30% of the population over 45, have used opioids. Opioids are the most common treatment for chronic pain, and 20% of office visits now include the prescription of an opioid.

470. In a 2016 report, the CDC explained that "[o]pioid pain reliever prescribing has quadrupled since 1999 and has increased in parallel with [opioid] overdoses."²⁰¹ Patients receiving opioid prescriptions for chronic pain account for the majority of overdoses. For these reasons, the CDC concluded that efforts to rein in the prescribing of opioids for chronic pain are critical "to reverse the epidemic of opioid drug overdose deaths and prevent opioid-related morbidity."²⁰²

1. All Defendants Have a Duty to Report Suspicious Orders and Not to Ship Those Orders Unless Due Diligence Disproves Their Suspicious

471. Multiple sources impose duties on the Defendants to report suspicious orders and further to not ship those orders unless due diligence disproves those suspicions.

472. First, under the common law, the Defendants had a duty to exercise reasonable care in delivering dangerous narcotic substances. By flooding Ohio with more opioids than

²⁰¹ Rose A. Rudd, *et al. Increases in Drug and Opioid Overdose Deaths—United States, 2000–2014.*, 64(50 & 51) Ctrs. for Disease Control and Prevention, Morbidity & Mortality Wkly. Rep. 1378-82 (2016), <https://www.cdc.gov/mmwr/preview/mmwrhtml/mm6450a3.htm>.

²⁰² *Id.*

could be used for legitimate medical purposes and by filling and failing to report orders that they knew or should have realized were likely being diverted for illicit uses, Defendants breached that duty and both created and failed to prevent a foreseeable risk of harm.

473. Second, each of the Defendants assumed a duty, when speaking publicly about opioids and their efforts to combat diversion, to speak accurately and truthfully.

474. Third, each of the Defendants was required to register with the DEA to manufacture and/or distribute Schedule II controlled substances. *See* 21 U.S.C. § 823(a)-(b), (e); 28 C.F.R. § 0.100. As registrants, Defendants were required to “maint[ain] . . . effective controls against diversion” and to “design and operate a system to disclose . . . suspicious orders of controlled substances.” 21 U.S.C. § 823(a)-(b); 21 C.F.R. § 1301.74. Defendants were further required to take steps to halt suspicious orders. Defendants violated their obligations under federal law.

475. Fourth, as described below, Defendants also had duties under applicable state laws.

476. Recognizing a need for greater scrutiny over controlled substances due to their potential for abuse and danger to public health and safety, the United States Congress enacted the Controlled Substances Act in 1970. The CSA and its implementing regulations created a closed-system of distribution for all controlled substances and listed chemicals. Congress specifically designed the closed chain of distribution to prevent the diversion of legally produced controlled substances into the illicit market. Congress was concerned with the diversion of drugs out of legitimate channels of distribution and acted to halt the “widespread diversion of [controlled substances] out of legitimate channels into the illegal market.” Moreover, the closed-system was specifically designed to ensure that there are multiple ways of identifying and preventing

diversion through active participation by registrants within the drug delivery chain. All registrants – which includes all manufacturers and distributors of controlled substances—must adhere to the specific security, recordkeeping, monitoring, and reporting requirements that are designed to identify or prevent diversion. When registrants at any level fail to fulfill their obligations, the necessary checks and balances collapse. The result is the scourge of addiction that has occurred.

477. The CSA requires manufacturers and distributors of Schedule II substances like opioids to: (a) limit sales within a quota set by the DEA for the overall production of Schedule II substances like opioids; (b) register to manufacture or distribute opioids; (c) maintain effective controls against diversion of the controlled substances that they manufacture or distribute; and (d) design and operate a system to identify suspicious orders of controlled substances, halt such unlawful sales, and report them to the DEA.

478. Central to the closed-system created by the CSA was the directive that the DEA determine quotas of each basic class of Schedule I and II controlled substances each year. The quota system was intended to reduce or eliminate diversion from “legitimate channels of trade” by controlling the “quantities of the basic ingredients needed for the manufacture of [controlled substances], and the requirement of order forms for all transfers of these drugs.” When evaluating production quotas, the DEA was instructed to consider the following information:

- a. Information provided by the Department of Health and Human Services;
- b. Total net disposal of the basic class [of each drug] by all manufacturers;
- c. Trends in the national rate of disposal of the basic class [of drug];
- d. An applicant’s production cycle and current inventory position;
- e. Total actual or estimated inventories of the class [of drug] and of all substances manufactured from the class and trends in inventory accumulation; and

- f. Other factors such as: changes in the currently accepted medical use of substances manufactured for a basic class; the economic and physical availability of raw materials; yield and sustainability issues; potential disruptions to production; and unforeseen emergencies.

479. It is unlawful to manufacture a controlled substance in Schedule II, like prescription opioids, in excess of a quota assigned to that class of controlled substances by the DEA.

480. To ensure that even drugs produced within quota are not diverted, Federal regulations issued under the CSA mandate that all registrants, manufacturers and distributors alike, “design and operate a system to disclose to the registrant suspicious orders of controlled substances.” 21 C.F.R. § 1301.74(b). Registrants are not entitled to be passive (but profitable) observers, but rather “shall inform the Field Division Office of the Administration in his area of suspicious orders when discovered by the registrant.” *Id.* Suspicious orders include orders of unusual size, orders deviating substantially from a normal pattern, and orders of unusual frequency. *Id.* Other red flags may include, for example, “[o]rdering the same controlled substance from multiple distributors.”

481. These criteria are disjunctive and are not all inclusive. For example, if an order deviates substantially from a normal pattern, the size of the order does not matter and the order should be reported as suspicious. Likewise, a distributor or manufacturer need not wait for a normal pattern to develop over time before determining whether a particular order is suspicious. The size of an order alone, regardless of whether it deviates from a normal pattern, is enough to trigger the responsibility to report the order as suspicious. The determination of whether an order is suspicious depends not only on the ordering patterns of the particular customer but also on the patterns of the entirety of the customer base and the patterns throughout the relevant

segment of the industry. For this reason, identification of suspicious orders serves also to identify excessive volume of the controlled substance being shipped to a particular region.

482. In sum, Defendants have several responsibilities under state and federal law with respect to control of the supply chain of opioids. First, they must set up a system to prevent diversion, including excessive volume and other suspicious orders. That would include reviewing their own data, relying on their observations of prescribers and pharmacies, and following up on reports or concerns of potential diversion. All suspicious orders must be reported to relevant enforcement authorities. Defendants must also stop shipment of any order which is flagged as suspicious and only ship orders which were flagged as potentially suspicious if, after conducting due diligence, they can determine that the order is not likely to be diverted into illegal channels.

483. State and federal statutes and regulations reflect a standard of conduct and care below which reasonably prudent manufacturers and distributors would not fall. Together, these laws and industry guidelines make clear that Distributor and Marketing Defendants alike possess and are expected to possess specialized and sophisticated knowledge, skill, information, and understanding of both the market for scheduled prescription narcotics and of the risks and dangers of the diversion of prescription narcotics when the supply chain is not properly controlled.

484. These laws and industry guidelines make clear that the Distributor Defendants and Marketing Defendants alike have a duty and responsibility to exercise their specialized and sophisticated knowledge, information, skill, and understanding to prevent the oversupply of prescription opioids and minimize the risk of their diversion into an illicit market.

485. The FTC has recognized the unique role of distributors. Since their inception, Distributor Defendants have continued to integrate vertically by acquiring businesses that are related to the distribution of pharmaceutical products and health care supplies. In addition to the actual distribution of pharmaceuticals, as wholesalers, Distributor Defendants also offer their pharmacy, or dispensing, customers a broad range of added services. For example, Distributor Defendants offer their pharmacies sophisticated ordering systems and access to an inventory management system and distribution facility that allows customers to reduce inventory carrying costs. Distributor Defendants are also able to use the combined purchase volume of their customers to negotiate the cost of goods with manufacturers and offer services that include software assistance and other database management support. *See Fed. Trade Comm'n v. Cardinal Health, Inc.*, 12 F. Supp. 2d 34, 41 (D.D.C. 1998) (granting the FTC's motion for preliminary injunction and holding that the potential benefits to customers did not outweigh the potential anti-competitive effect of a proposed merger between Cardinal Health, Inc. and Bergen Brunswig Corp.). As a result of their acquisition of a diverse assortment of related businesses within the pharmaceutical industry, as well as the assortment of additional services they offer, Distributor Defendants have a unique insight into the ordering patterns and activities of their dispensing customers.

486. Marketing Defendants also have specialized and detailed knowledge of the potential suspicious prescribing and dispensing of opioids through their regular visits to doctors' offices and pharmacies, and from their purchase of data from commercial sources, such as IMS Health (now IQVIA). Their extensive boots-on-the-ground presence through their sales forces allows Marketing Defendants to observe the signs of suspicious prescribing and dispensing discussed elsewhere in the Complaint—lines of seemingly healthy patients, out-of-state license

plates, and cash transactions, to name only a few. In addition, Marketing Defendants regularly mined data, including, upon information and belief, chargeback data, that allowed them to monitor the volume and type of prescribing of doctors, including sudden increases in prescribing and unusually high dose prescribing, that would have alerted them, independent of their sales representatives, to suspicious prescribing. These information points gave Marketing Defendants insight into prescribing and dispensing conduct that enabled them to play a valuable role in the preventing diversion and fulfilling their obligations under the CSA.

487. Defendants have a duty, and are expected, to be vigilant in deciding whether a prospective customer can be trusted to deliver controlled substances only for lawful purposes.

488. Defendants breached these duties by failing to: (a) control the supply chain; (b) prevent diversion; (c) report suspicious orders; and (d) halt shipments of opioids in quantities they knew or should have known could not be justified and were indicative of serious overuse of opioids.

2. Defendants Were Aware of and Have Acknowledged Their Obligations to Prevent Diversion and to Report and Take Steps to Halt Suspicious Orders

489. The reason for the reporting rules is to create a “closed” system intended to control the supply and reduce the diversion of these drugs out of legitimate channels into the illicit market, while at the same time providing the legitimate drug industry with a unified approach to narcotic and dangerous drug control. Both because distributors handle such large volumes of controlled substances, and because they are uniquely positioned, based on their knowledge of their customers and orders, as the first line of defense in the movement of legal pharmaceutical controlled substances from legitimate channels into the illicit market, distributors’ obligation to maintain effective controls to prevent diversion of controlled

substances is critical. Should a distributor deviate from these checks and balances, the closed system of distribution, designed to prevent diversion, collapses.

490. Defendants were well aware they had an important role to play in this system, and also knew or should have known that their failure to comply with their obligations would have serious consequences.

491. Recently, Mallinckrodt admitted in a settlement with DEA that “[a]s a registrant under the CSA, Mallinckrodt had a responsibility to maintain effective controls against diversion, including a requirement that it review and monitor these sales and report suspicious orders to DEA.” Mallinckrodt further stated that it “recognizes the importance of the prevention of diversion of the controlled substances they manufacture” and agreed that it would “design and operate a system that meets the requirements of 21 CFR 1301.74(b) . . . [such that it would] utilize all available transaction information to identify suspicious orders of any Mallinckrodt product.” Mallinckrodt specifically agreed “to notify DEA of any diversion and/or suspicious circumstances involving any Mallinckrodt controlled substances that Mallinckrodt discovers.”

492. Trade organizations to which Defendants belong have acknowledged that wholesale distributors have been responsible for reporting suspicious orders for more than 40 years. The Healthcare Distribution Management Association (“HDMA”), now known as the Healthcare Distribution Alliance (“HDA”), a trade association of pharmaceutical distributors to which Distributor Defendants belong, has long taken the position that distributors have responsibilities to “prevent diversion of controlled prescription drugs” not only because they have statutory and regulatory obligations to do so, but “as responsible members of society.” Guidelines established by the HDA also explain that distributors, “[a]t the center of a

sophisticated supply chain . . . are uniquely situated to perform due diligence in order to help support the security of the controlled substances they deliver to their customers.”

493. The DEA also repeatedly reminded the Defendants of their obligations to report and decline to fill suspicious orders. Responding to the proliferation of pharmacies operating on the internet that arranged illicit sales of enormous volumes of opioids to drug dealers and customers, the DEA began a major push to remind distributors of their obligations to prevent these kinds of abuses and educate them on how to meet these obligations. Since 2007, the DEA has hosted at least five conferences that provided registrants with updated information about diversion trends and regulatory changes. Each of the Distributor Defendants attended at least one of these conferences. The DEA has also briefed wholesalers regarding legal, regulatory, and due diligence responsibilities since 2006. During these briefings, the DEA pointed out the red flags wholesale distributors should look for to identify potential diversion.

494. The DEA also advised in a September 27, 2006 letter to every commercial entity registered to distribute controlled substances that they are “one of the key components of the distribution chain. If the closed system is to function properly . . . distributors must be vigilant in deciding whether a prospective customer can be trusted to deliver controlled substances only for lawful purposes. This responsibility is critical, as . . . the illegal distribution of controlled substances has a substantial and detrimental effect on the health and general welfare of the American people.” The DEA’s September 27, 2006 letter also expressly reminded them that registrants, in addition to reporting suspicious orders, have a “statutory responsibility to exercise due diligence to avoid filling suspicious orders that might be diverted into other than legitimate medical, scientific, and industrial channels.” The same letter reminds distributors of the importance of their obligation to “be vigilant in deciding whether a prospective customer can be

trusted to deliver controlled substances only for lawful purposes,” and warns that “even just one distributor that uses its DEA registration to facilitate diversion can cause enormous harm.”

495. The DEA sent another letter to Defendants on December 27, 2007, reminding them that, as registered manufacturers and distributors of controlled substances, they share, and must each abide by, statutory and regulatory duties to “maintain effective controls against diversion” and “design and operate a system to disclose to the registrant suspicious orders of controlled substances.” The DEA’s December 27, 2007 letter reiterated the obligation to detect, report, and not fill suspicious orders and provided detailed guidance on what constitutes a suspicious order and how to report (*e.g.*, by specifically identifying an order as suspicious, not merely transmitting data to the DEA). Finally, the letter references the Revocation of Registration issued in *Southwood Pharmaceuticals, Inc.*, 72 Fed. Reg. 36,487-01 (July 3, 2007), which discusses the obligation to report suspicious orders and “some criteria to use when determining whether an order is suspicious.”

3. Defendants Worked Together to Inflate the Quotas of Opioids They Could Distribute

496. Finding it impossible to legally achieve their ever-increasing sales ambitions, Defendants engaged in the common purpose of increasing the supply of opioids and fraudulently increasing the quotas that governed the manufacture and distribution of their prescription opioids.

497. Wholesale distributors such as the Distributor Defendants had close financial relationships with both Marketing Defendants and customers, for whom they provide a broad range of value added services that render them uniquely positioned to obtain information and control against diversion. These services often otherwise would not be provided by manufacturers to their dispensing customers and would be difficult and costly for the dispenser

to reproduce. For example, “[w]holesalers have sophisticated ordering systems that allow customers to electronically order and confirm their purchases, as well as to confirm the availability and prices of wholesalers’ stock.” *Fed. Trade Comm’n v. Cardinal Health, Inc.*, 12 F. Supp. 2d 34, 41 (D.D.C. 1998). Through their generic source programs, wholesalers are also able “to combine the purchase volumes of customers and negotiate the cost of goods with manufacturers.” Wholesalers typically also offer marketing programs, patient services, and other software to assist their dispensing customers.

498. Distributor Defendants had financial incentives from the Marketing Defendants to distribute higher volumes, and thus to refrain from reporting or declining to fill suspicious orders. Wholesale drug distributors acquire pharmaceuticals, including opioids, from manufacturers at an established wholesale acquisition cost. Discounts and rebates from this cost may be offered by manufacturers based on market share and volume. As a result, higher volumes may decrease the cost per pill to distributors. Decreased cost per pill in turn, allows wholesale distributors to offer more competitive prices, or alternatively, pocket the difference as additional profit. Either way, the increased sales volumes result in increased profits. The Marketing Defendants engaged in the practice of paying rebates and/or chargebacks to the Distributor Defendants for sales of prescription opioids as a way to help them boost sales and better target their marketing efforts. The *Washington Post* has described the practice as industry-wide, and the HDA includes a “Contracts and Chargebacks Working Group,” suggesting a standard practice. In addition, in a recent settlement with the DEA, Mallinckrodt acknowledged that “[a]s part of their business model Mallinckrodt collects transaction information, referred to as chargeback data, from their direct customers (distributors).” The transaction information contains data relating to the direct customer sales of controlled substances to ‘downstream’

registrants,” meaning pharmacies or other dispensaries, such as hospitals. Marketing Defendants buy data from pharmacies as well. This exchange of information, upon information, and belief, would have opened channels providing for the exchange of information revealing suspicious orders as well.

499. The contractual relationships among the Defendants also include vault security programs. Defendants are required to maintain certain security protocols and storage facilities for the manufacture and distribution of their opioids. The manufacturers negotiated agreements whereby the Marketing Defendants installed security vaults for the Distributor Defendants in exchange for agreements to maintain minimum sales performance thresholds. These agreements were used by the Defendants as a tool to violate their reporting and diversion duties in order to reach the required sales requirements.

500. In addition, Defendants worked together to achieve their common purpose through trade or other organizations, such as the Pain Care Forum (“PCF”) and the HDA.

501. The PCF has been described as a coalition of drug makers, trade groups and dozens of non-profit organizations supported by industry funding, including the Front Groups described in this Complaint. The PCF recently became a national news story when it was discovered that lobbyists for members of the PCF quietly shaped federal and state policies regarding the use of prescription opioids for more than a decade.

502. The Center for Public Integrity and The Associated Press obtained “internal documents shed[ding] new light on how drug makers and their allies shaped the national response to the ongoing wave of prescription opioid abuse.”²⁰³ Specifically, PCF members spent

²⁰³ Matthew Perrone & Ben Wieder, *Pro-Painkiller Echo Chamber Shaped Policy Amid Drug Epidemic*, The Ctr. for Pub. Integrity, <https://www.publicintegrity.org/2016/09/19/20201/pro->

over \$740 million lobbying in the nation's capital and in all 50 statehouses on an array of issues, including opioid-related measures.²⁰⁴

503. The Defendants who stood to profit from expanded prescription opioid use are members of and/or participants in the PCF. In 2012, membership and participating organizations included Endo, Purdue, Actavis, and Cephalon. Each of the Marketing Defendants worked together through the PCF. But, the Marketing Defendants were not alone. The Distributor Defendants actively participated, and continue to participate in the PCF, at a minimum, through their trade organization, the HDA.²⁰⁵ The Distributor Defendants participated directly in the PCF as well.

504. Additionally, the HDA led to the formation of interpersonal relationships and an organization among the Defendants. Although the entire HDA membership directory is private, the HDA website confirms that each of the Distributor Defendants and the Marketing Defendants including Actavis, Endo, Purdue, Mallinckrodt, and Cephalon were members of the HDA. Additionally, the HDA and each of the Distributor Defendants, eagerly sought the active

[painkiller-echo-chamber-shaped-policy-amid-drug-epidemic](#). (Last Updated Dec. 15, 2016, 9:09 AM) (emphasis added).

²⁰⁴ *Id.*

²⁰⁵ *Id.*; The Executive Committee of the HDA (formerly the HDMA) currently includes the Chief Executive Officer, Pharmaceutical Segment for Cardinal Health, Inc., the Group President, Pharmaceutical Distribution and Strategic Global Source for AmerisourceBergen Corporation, and the President, U.S. Pharmaceutical for McKesson Corporation. *Executive Committee*, Healthcare Distribution Alliance <https://www.healthcaredistribution.org/about/executive-committee> (last accessed Apr. 25, 2018).

membership and participation of the Marketing Defendants by advocating for the many benefits of members, including “strengthen[ing] . . . alliances.”²⁰⁶

505. [REDACTED]

506. Beyond strengthening alliances, the benefits of HDA membership included the ability to, among other things, “network one on one with manufacturer executives at HDA’s members-only Business and Leadership Conference,” “networking with HDA wholesale distributor members,” “opportunities to host and sponsor HDA Board of Directors events,” “participate on HDA committees, task forces and working groups with peers and trading partners,” and “make connections.”²⁰⁷ Clearly, the HDA and the Defendants believed that membership in the HDA was an opportunity to create interpersonal and ongoing organizational relationships and “alliances” between the Marketing and Distributor Defendants.

507. The application for manufacturer membership in the HDA further indicates the level of connection among the Defendants and the level of insight that they had into each other’s

²⁰⁶ *Manufacturer Membership*, Healthcare Distribution Alliance, , <https://www.healthcaredistribution.org/~media/pdfs/membership/manufacturer-membership-benefits.ashx?la=en>. (last accessed Apr. 25, 2018).

²⁰⁷ *Id.*

businesses.²⁰⁸ For example, the manufacturer membership application must be signed by a “senior company executive,” and it requests that the manufacturer applicant identify a key contact and any additional contacts from within its company.

508. The HDA application also requests that the manufacturer identify its current distribution information, including the facility name and contact information. Manufacturer members were also asked to identify their “most recent year end net sales” through wholesale distributors, including the Distributor Defendants AmerisourceBergen, Cardinal Health, and McKesson and their subsidiaries.

509. The closed meetings of the HDA’s councils, committees, task forces and working groups provided the Marketing and Distributor Defendants with the opportunity to work closely together, confidentially, to develop and further the common purpose and interests of the enterprise.

510. The HDA also offers a multitude of conferences, including annual business and leadership conferences. The HDA and the Distributor Defendants advertise these conferences to the Marketing Defendants as an opportunity to “bring together high-level executives, thought leaders and influential managers . . . to hold strategic business discussions on the most pressing industry issues.”²⁰⁹ The conferences also gave the Marketing and Distributor Defendants “unmatched opportunities to network with [their] peers and trading partners at all levels of the

²⁰⁹ *Business and Leadership Conference – Information for Manufacturers*, Healthcare Distribution Alliance, <https://web.archive.org/web/20150424054305/https://www.healthcaredistribution.org/events/2015-business-and-leadership-conference/blc-for-manufacturers>.

healthcare distribution industry.”²¹⁰ The HDA and its conferences were significant opportunities for the Marketing and Distributor Defendants to interact at a high-level of leadership. It is clear that the Marketing Defendants embraced this opportunity by attending and sponsoring these events.²¹¹

511. After becoming members of HDA, Defendants were eligible to participate on councils, committees, task forces and working groups, including:

- a. Industry Relations Council: “This council, composed of distributor and manufacturer members, provides leadership on pharmaceutical distribution and supply chain issues.”
- b. Business Technology Committee: “This committee provides guidance to HDA and its members through the development of collaborative e-commerce business solutions. The committee’s major areas of focus within pharmaceutical distribution include information systems, operational integration and the impact of e-commerce.” Participation in this committee includes distributor and manufacturer members.
- c. Logistics Operation Committee: “This committee initiates projects designed to help members enhance the productivity, efficiency and customer satisfaction within the healthcare supply chain. Its major areas of focus include process automation, information systems, operational integration, resource management and quality improvement.” Participation in this committee includes distributor and manufacturer members.
- d. Manufacturer Government Affairs Advisory Committee: “This committee provides a forum for briefing HDA’s manufacturer members on federal and state legislative and regulatory activity affecting the pharmaceutical distribution channel. Topics discussed include such issues as prescription drug traceability, distributor licensing, FDA and DEA regulation of distribution, importation and Medicaid/Medicare reimbursement.” Participation in this committee includes manufacturer members.
- e. Contracts and Chargebacks Working Group: “This working group explores how the contract administration process can be streamlined

through process improvements or technical efficiencies. It also creates and exchanges industry knowledge of interest to contract and chargeback professionals.” Participation in this group includes manufacturer and distributor members.

512. The Distributor Defendants and Marketing Defendants also participated, through the HDA, in Webinars and other meetings designed to exchange detailed information regarding their prescription opioid sales, including purchase orders, acknowledgements, ship notices, and invoices.²¹² For example, on April 27, 2011, the HDA offered a Webinar to “accurately and effectively exchange business transactions between distributors and manufacturers...” The Marketing Defendants used this information to gather high-level data regarding overall distribution and direct the Distributor Defendants on how to most effectively sell prescription opioids.

513. Taken together, the interaction and length of the relationships between and among the Marketing and Distributor Defendants reflects a deep level of interaction and cooperation between two groups in a tightly knit industry. The Marketing and Distributor Defendants were not two separate groups operating in isolation or two groups forced to work together in a closed system. Defendants operated together as a united entity, working together on multiple fronts, to engage in the unlawful sale of prescription opioids.

514. The HDA and the PCF are but two examples of the overlapping relationships, and concerted joint efforts to accomplish common goals and demonstrates that the leaders of each of the Defendants were in communication and cooperation.

²¹² *Webinar Leveraging EDI: Order-to-Cash Transactions CD Box Set*, Healthcare Distribution Alliance, (Apr. 27, 2011), <https://www.healthcaredistribution.org/resources/webinar-leveraging-edi>.

515. Publications and guidelines issued by the HDA nevertheless confirm that the Defendants utilized their membership in the HDA to form agreements. Specifically, in the fall of 2008, the HDA published the Industry Compliance Guidelines: Reporting Suspicious Orders and Preventing Diversion of Controlled Substances (the “Industry Compliance Guidelines”) regarding diversion. As the HDA explained in an amicus brief, the Industry Compliance Guidelines were the result of “[a] committee of HDMA members contribut[ing] to the development of this publication” beginning in late 2007.

516. This statement by the HDA and the Industry Compliance Guidelines support the allegation that Defendants utilized the HDA to form agreements about their approach to their duties under the CSA. As John M. Gray, President/CEO of the HDA stated to the Energy and Commerce Subcommittee on Health in April 2014, is “difficult to find the right balance between proactive anti-diversion efforts while not inadvertently limiting access to appropriately prescribed and dispensed medications.” Here, it is apparent that all of the Defendants found the same balance – an overwhelming pattern and practice of failing to identify, report or halt suspicious orders, and failure to prevent diversion.

517. The Defendants’ scheme had a decision-making structure driven by the Marketing Defendants and corroborated by the Distributor Defendants. The Marketing Defendants worked together to control the state and federal government’s response to the manufacture and distribution of prescription opioids by increasing production quotas through a systematic refusal to maintain effective controls against diversion, to identify suspicious orders, to report suspicious orders to the DEA, [REDACTED]

518. The Defendants worked together to control the flow of information and influence state and federal governments to pass legislation that supported the use of opioids and limited the

authority of law enforcement to rein in illicit or inappropriate prescribing and distribution. The Marketing and Distributor Defendants did this through their participation in the PCF and HDA.

519. The Defendants also worked together to ensure that the Aggregate Production Quotas, Individual Quotas and Procurement Quotas allowed by the DEA remained artificially high and ensured that suspicious orders were not reported to the DEA in order to ensure that the DEA had no basis for refusing to increase or decrease production quotas due to diversion.

520. The Defendants also had reciprocal obligations under the CSA to report suspicious orders of other parties if they became aware of them. Defendants were thus collectively responsible for each other's compliance with their reporting obligations.

521. Defendants thus knew that their own conduct could be reported by other distributors or manufacturers and that their failure to report suspicious orders they filled could be brought to the DEA's attention. As a result, Defendants had an incentive to communicate with each other about the reporting of suspicious orders to ensure consistency in their dealings with DEA.

522. The desired consistency was achieved. As described below, none of the Defendants reported suspicious orders and the flow of opioids continued unimpeded.

4. Defendants Kept Careful Track of Prescribing Data and Knew About Suspicious Orders and Prescribers

523. The data that reveals and/or confirms the identity of each wrongful opioid distributor is hidden from public view in the DEA's confidential ARCOS database. The data necessary to identify with specificity the transactions that were suspicious is in possession of the Distributor and Marketing Defendants but has not been disclosed to the public.

524. Publicly available information confirms that Distributor and Marketing Defendants funneled far more opioids into communities across the United States than could have

been expected to serve legitimate medical use, and ignored other red flags of suspicious orders.

This information, along with the information known only to Distributor and Marketing

Defendants, would have alerted them to potentially suspicious orders of opioids.

525. This information includes the following facts:

- a. distributors and manufacturers have access to detailed transaction-level data on the sale and distribution of opioids, which can be broken down by zip code, prescriber, and pharmacy and includes the volume of opioids, dose, and the distribution of other controlled and non-controlled substances;
- b. manufacturers make use of that data to target their marketing and, for that purpose, regularly monitor the activity of doctors and pharmacies;
- c. manufacturers and distributors regularly visit pharmacies and doctors to promote and provide their products and services, which allows them to observe red flags of diversion, as described in paragraphs 186 and 200;
- d. Distributor Defendants together account for approximately 90% of all revenues from prescription drug distribution in the United States, and each plays such a large part in the distribution of opioids that its own volume provides a ready vehicle for measuring the overall flow of opioids into a pharmacy or geographic area; and
- e. Marketing Defendants purchased chargeback data (in return for discounts to Distributor Defendants) that allowed them to monitor the combined flow of opioids into a pharmacy or geographic area.

526. The conclusion that Defendants were on notice of the problems of abuse and diversion follows inescapably from the fact that they flooded communities with opioids in quantities that they knew or should have known exceeded any legitimate market for opioids-even the wider market for chronic pain.

527. At all relevant times, the Defendants were in possession of national, regional, state, and local prescriber- and patient-level data that allowed them to track prescribing patterns over time. They obtained this information from data companies, including but not limited to: IMS Health, QuintilesIMS, IQVIA, Pharmaceutical Data Services, Source Healthcare Analytics,

NDS Health Information Services, Verispan, Quintiles, SDI Health, ArcLight, Scriptline, Wolters Kluwer, and/or PRA Health Science, and all of their predecessors or successors in interest (the “Data Vendors”).

528. The Distributor Defendants developed “know your customer” questionnaires and files. This information, compiled pursuant to comments from the DEA in 2006 and 2007 was intended to help the Defendants identify suspicious orders or customers who were likely to divert prescription opioids.²¹³ The “know your customer” questionnaires informed the Defendants of the number of pills that the pharmacies sold, how many non-controlled substances were sold compared to controlled substances, whether the pharmacy buys from other distributors, the types of medical providers in the area, including pain clinics, general practitioners, hospice facilities, cancer treatment facilities, among others, and these questionnaires put the recipients on notice of suspicious orders.

529. Defendants purchased nationwide, regional, state, and local prescriber- and patient-level data from the Data Vendors that allowed them to track prescribing trends, identify suspicious orders, identify patients who were doctor shopping, identify pill mills, etc. The Data Vendors’ information purchased by the Defendants allowed them to view, analyze, compute, and track their competitors’ sales, and to compare and analyze market share information.²¹⁴

²¹³ *Suggested Questions a Distributor Should Ask Prior to Shipping Controlled Substances*, Drug Enforcement Admin. Diversion Control Div., https://www.deadiversion.usdoj.gov/mgtgs/pharm_industry/14th_pharm/levinl_ques.pdf; Richard Widup, Jr. & Kathleen H. Dooley, Esq. *Pharmaceutical Production Diversion: Beyond the PDMA*, Purdue Pharma and McGuireWoods LLC, (Oct. 2010), https://www.mcguirewoods.com/news-resources/publications/lifesciences/product_diversion_beyond_pdma.pdf.

²¹⁴ A Verispan representative testified that the Distributor Defendants use the prescribing information to “drive market share.” *Sorrell v. IMS Health Inc.*, No. 10-779, 2011 WL 661712, *9-10 (Feb. 22, 2011).

530. IMS Health, for example, provided Defendants with reports detailing prescriber behavior and the number of prescriptions written between competing products.²¹⁵

531. Similarly, Wolters Kluwer, an entity that eventually owned data mining companies that were created by McKesson (Source) and Cardinal Health (ArcLight), provided the Defendants with charts analyzing the weekly prescribing patterns of multiple physicians, organized by territory, regarding competing drugs, and analyzed the market share of those drugs.²¹⁶

532. This information allowed the Defendants to track and identify instances of overprescribing. In fact, one of the Data Vendors' experts testified that the Data Vendors' information could be used to track, identify, report and halt suspicious orders of controlled substances.²¹⁷

533. Defendants were, therefore, collectively aware of the suspicious orders that flowed daily from their manufacturing and distribution facilities.

534. Defendants refused to identify, investigate and report suspicious orders to the DEA when they became aware of the same despite their actual knowledge of drug diversion rings. As described in detail below, Defendants refused to identify suspicious orders and

²¹⁵ Paul Kallukaran & Jerry Kagan, *Data Mining at IMS HEALTH: How We Turned a Mountain of Data into a Few Information-Rich Molehills*, (accessed on February 15, 2018), <http://citeseerx.ist.psu.edu/viewdoc/download?doi=10.1.1.198.349&rep=rep1&type=pdf>, Figure 2 at p.3.

²¹⁶ Joint Appendix in *Sorrell v. IMS Health Inc.*, No. 10-779, 2011 WL 705207, *467-471 (Feb. 22, 2011).

²¹⁷ In *Sorrell*, expert Eugene "Mick" Kolassa testified, on behalf of the Data Vendor, that "a firm that sells narcotic analgesics was able to use prescriber-identifiable information to identify physicians that seemed to be prescribing an inordinately high number of prescriptions for their product." *Id.*; see also Joint Appendix in *Sorrell v. IMS Health*, No. 10-779, 2011 WL 687134, at *204 (Feb. 22, 2011).

diverted drugs despite the DEA issuing final decisions against distributors in 178 registrant actions between 2008 and 2012²¹⁸ and 117 recommended decisions in registrant actions from The Office of Administrative Law Judges. These numbers include seventy-six (76) actions involving orders to show cause and forty-one (41) actions involving immediate suspension orders, all for failure to report suspicious orders.²¹⁹

535. Sales representatives were also aware that the prescription opioids they were promoting were being diverted, often with lethal consequences. As a sales representative wrote on a public forum:

Actions have consequences—so some patient gets Rx'd the 80mg OxyContin when they probably could have done okay on the 20mg (but their doctor got “sold” on the 80mg) and their teen son/daughter/child’s teen friend finds the pill bottle and takes out a few 80’s... next they’re at a pill party with other teens and some kid picks out a green pill from the bowl... they go to sleep and don’t wake up (because they don’t understand respiratory depression) Stupid decision for a teen to make...yes... but do they really deserve to die?

536. Moreover, Defendants’ sales incentives rewarded sales representatives who happened to have pill mills within their territories, enticing those representatives to look the other way even when their in-person visits to such clinics should have raised numerous red flags. In one example, a pain clinic in South Carolina was diverting massive quantities of OxyContin. People traveled to the clinic from towns as far as 100 miles away to get prescriptions, the DEA’s diversion unit raided the clinic, and prosecutors eventually filed criminal charges against the doctors. But Purdue’s sales representative for that territory, Eric Wilson, continued to promote

²¹⁸ Evaluation and Inspections Div., Office of the Inspector Gen., U.S. Dep’t of Justice, *The Drug Enforcement Administration’s Adjudication of Registrant Actions* 6 (2014), <https://oig.justice.gov/reports/2014/e1403.pdf>.

²¹⁹ *Id.*

OxyContin sales at the clinic. He reportedly told another local physician that this clinic accounted for 40% of the OxyContin sales in his territory. At that time, Wilson was Purdue's top-ranked sales representative.²²⁰ In response to news stories about this clinic, Purdue issued a statement, declaring that "if a doctor is intent on prescribing our medication inappropriately, such activity would continue regardless of whether we contacted the doctor or not."²²¹

537. In another example, a Purdue sales manager informed her supervisors in 2009 about a suspected pill mill in Los Angeles, reporting over email that when she visited the clinic with her sales representative, "it was packed with a line out the door, with people who looked like gang members," and that she felt "very certain that this an organized drug ring[.]"²²² She wrote, "This is clearly diversion. Shouldn't the DEA be contacted about this?" But her supervisor at Purdue responded that while they were "considering all angles," it was "really up to [the wholesaler] to make the report."²²³ This pill mill was the source of 1.1 million pills trafficked to Everett, Washington, a city of around 100,000 people. Purdue waited until after the clinic was shut down in 2010 to inform the authorities.

538. Defendants' obligation to report suspicious prescribing ran head on into their marketing strategy. Defendants did identify doctors who were their most prolific prescribers, not to report them, but to market to them. It would make little sense to focus on marketing to doctors who may be engaged in improper prescribing only to report them to law enforcement, just as it would make little sense to report those doctors who drove Defendants' sales.

²²² Harriet Ryan et al., *More Than 1 Million OxyContin Pills Ended up in the Hands of Criminals and Addicts. What the Drugmaker Knew*, Los Angeles Times, (July 10, 2016), <http://www.latimes.com/projects/la-me-oxycontin-part2/>.

²²³ *Id.*

539. As discussed below, Endo knew that Opana ER was being widely abused. Yet the New York Attorney General found in its investigation of Endo that the company's sales representatives were not aware that they had a duty to report suspicious activity and were not trained on the company's policies or duties to report suspicious activity, and Endo paid bonuses to sales representatives for detailing prescribers who were subsequently arrested for illegal prescribing.

540. Defendants purchased data from IMS Health (now IQVIA) or other proprietary sources to identify doctors to target for marketing and to monitor their own and competitors' sales. Marketing visits were focused on increasing, sustaining, or converting the prescriptions of the biggest prescribers, particularly through aggressive, high frequency detailing visits.

541. For example, at a national sales meeting presentation in 2011, Actavis pressed its sales representatives to focus on its high prescribers: "To meet and exceed our quota, we must continue to get Kadian scripts from our loyalists. MCOs will continue to manage the pain products more closely. We MUST have new patient starts or we will fall back into 'the big leak'. We need to fill the bucket faster than it leaks." "The selling message should reflect the opportunity and prescribing preferences of each account. High Kadian Writers / Protect and Grow/ Grow = New Patient Starts and Conversions."²²⁴ In an example of how new patients + a high volume physician can impact performance: "102% of quota was achieved by just one high volume physician initiating Kadian on 2-3 new patients per week."²²⁵

²²⁴ ACTAVIS0969604-27, at 616.

²²⁵ *Id.* at 625.

pharmacist had noticed the volume of prescriptions coming from Paolino's clinic and alerted authorities. Purdue had the prescribing data from the clinic and alerted no one.

546. Sales representatives making in-person visits to such clinics were likewise not fooled. But as pill mills were lucrative for the manufacturers and individual sales representatives alike, Marketing Defendants and their employees turned a collective blind eye, allowing certain clinics to dispense staggering quantities of potent opioids and feigning surprise when the most egregious examples eventually made the nightly news.

5. Defendants Failed to Report Suspicious Orders or Otherwise Act to Prevent Diversion

547. As discussed above, Defendants failed to report suspicious orders, prevent diversion, or otherwise control the supply of opioids following into communities across America. Despite the notice described above, and in disregard of their duties, Defendants continued to pump massive quantities of opioids despite their obligations to control the supply, prevent diversion, report and take steps to halt suspicious orders.

548. Governmental agencies and regulators have confirmed (and in some cases Defendants have admitted) that Defendants did not meet their obligations and have uncovered especially blatant wrongdoing.

549. For example, on January 5, 2017, McKesson entered into an Administrative Memorandum Agreement with the DEA wherein it agreed to pay a \$150 million civil penalty for, inter alia, failure to identify and report suspicious orders at its facilities in Aurora, CO; Aurora, IL; Delran, NJ; LaCrosse, WI; Lakeland FL; Landover, MD; La Vista, NE; Livonia, MI; Methuen, MA; Santa Fe Springs, CA; Washington Courthouse, OH; and West Sacramento, CA. McKesson admitted that, at various times during the period from January 1, 2009 through the effective date of the Agreement (January 17, 2017) it "did not identify or report to [the] DEA

certain orders placed by certain pharmacies which should have been detected by McKesson as suspicious based on the guidance contained in the DEA Letters.”

550. McKesson further admitted that, during this time period, it “failed to maintain effective controls against diversion of particular controlled substances into other than legitimate medical, scientific and industrial channels by sales to certain of its customers in violation of the CSA and the CSA’s implementing regulations, 21 C.F.R. Part 1300 et seq., at the McKesson Distribution Centers” including the McKesson Distribution Center located in Washington Court House, Ohio. Due to these violations, McKesson agreed to a partial suspension of its authority to distribute controlled substances from certain of its facilities some of which (including the one in Washington Courthouse, Ohio), investigators found “were supplying pharmacies that sold to criminal drug rings.”

551. Similarly, in 2017, the Department of Justice fined Mallinckrodt \$35 million for failure to report suspicious orders of controlled substances, including opioids, and for violating recordkeeping requirements. The government alleged that “Mallinckrodt failed to design and implement an effective system to detect and report ‘suspicious orders’ for controlled substances—orders that are unusual in their frequency, size, or other patterns . . . [and] Mallinckrodt supplied distributors, and the distributors then supplied various U.S. pharmacies and pain clinics, an increasingly excessive quantity of oxycodone pills without notifying DEA of these suspicious orders.”

552. On December 23, 2016, Cardinal Health agreed to pay the United States \$44 million to resolve allegations that it violated the Controlled Substances Act in Maryland, Florida and New York by failing to report suspicious orders of controlled substances, including oxycodone, to the DEA. In the settlement agreement, Cardinal Health admitted, accepted, and

acknowledged that it had violated the CSA between January 1, 2009 and May 14, 2012 by failing to:

- a. “timely identify suspicious orders of controlled substances and inform the DEA of those orders, as required by 21 C.F.R. §1301.74(b)”;
- b. “maintain effective controls against diversion of particular controlled substances into other than legitimate medical, scientific, and industrial channels, as required by 21 C.F.R. §1301.74, including the failure to make records and reports required by the CSA or DEA’s regulations for which a penalty may be imposed under 21 U.S.C. §842(a)(5)”;
- c. “execute, fill, cancel, correct, file with the DEA, and otherwise handle DEA ‘Form 222’ order forms and their electronic equivalent for Schedule II controlled substances, as required by 21 U.S.C. §828 and 21 C.F.R. Part 1305.”

553. In 2012, the State of West Virginia sued AmerisourceBergen and Cardinal Health, as well as several smaller wholesalers, for numerous causes of action, including violations of the CSA, consumer credit and protection, and antitrust laws and the creation of a public nuisance. Unsealed court records from that case demonstrate that AmerisourceBergen, along with McKesson and Cardinal Health, together shipped 423 million pain pills to West Virginia between 2007 and 2012. AmerisourceBergen itself shipped 80.3 million hydrocodone pills and 38.4 million oxycodone pills during that time period. These quantities alone are sufficient to show that the Defendants failed to control the supply chain or to report and take steps to halt suspicious orders. In 2016, AmerisourceBergen agreed to settle the West Virginia lawsuit for \$16 million to the state; Cardinal Health settled for \$20 million.

554. H.D. Smith has also routinely been found to have violated its duties to report suspicious orders and halt suspicious shipments of prescription opioids. According to a recent letter from the U.S. House of Representatives Committee on Energy and Commerce, data provided to the Committee showed that between 2007 and 2008, H.D. Smith provided two pharmacies in Williamson, West Virginia, a town with a population of 3,191, combined total of

nearly 5 million hydrocodone and oxycodone pills—approximately 1,565 hydrocodone and oxycodone pills for every man, woman, and child in Williamson.²²⁸ According to press reports, H.D. Smith distributed approximately 13.7 million hydrocodone and 4.4 million oxycodone pills to West Virginia between 2007 and 2012.²²⁹ Press accounts further indicate that H.D. Smith did not submit any suspicious order reports to the state for at least a decade.²³⁰ Upon information and belief, H.D. Smith engaged in similar wrongful activities in Ohio.

555. Thus, as various governmental agencies have alleged or found—and as Defendants themselves have admitted—the Defendants, acting in disregard of their duties, pumped massive quantities of opioids into communities around the country despite their obligations to control the supply, prevent diversion, and report and take steps to halt suspicious orders.

6. Defendants Delayed a Response to the Opioid Crisis by Pretending to Cooperate with Law Enforcement

556. When a manufacturer or distributor does not report or stop suspicious orders, prescriptions for controlled substances may be written and dispensed to individuals who abuse them or who sell them to others to abuse. This, in turn, fuels and expands the illegal market and results in opioid-related overdoses. Without reporting by those involved in the supply chain, law enforcement may be delayed in taking action—or may not know to take action at all.

²²⁸ See January 26, 2018 Letter to J. Christopher Smith, President and CEO, H.D. Smith, from the House Committee on Energy and Commerce.

²²⁹ Eric Eyre, *Drug wholesaler agrees to pay \$3.5M to settle WV lawsuit*, Charleston Gazette-Mail, Jan. 3, 2017 available at https://www.wvgazettemail.com/news/health/drug-wholesaler-agrees-to-pay-m-to-settle-wv-lawsuit/article_4e8c7f4c-cec5-5173-a199-c19374a6250c.html

²³⁰ *Id.*

557. After being caught failing to comply with particular obligations at particular facilities, Distributor Defendants made broad promises to change their ways and insisted that they sought to be good corporate citizens. As part of McKesson's 2008 Settlement with the DEA, McKesson claimed to have "taken steps to prevent such conduct from occurring in the future," including specific measures delineated in a "Compliance Addendum" to the Settlement. Yet, in 2017, McKesson paid \$150 million to resolve an investigation by the U.S. DOJ for again failing to report suspicious orders of certain drugs, including opioids. Even though McKesson had been sanctioned in 2008 for failure to comply with its legal obligations regarding controlling diversion and reporting suspicious orders, and even though McKesson had specifically agreed in 2008 that it would no longer violate those obligations, McKesson continued to violate the laws in contrast to its written agreement not to do so.

558. More generally, the Distributor Defendants publicly portrayed themselves as committed to working with law enforcement, opioid manufacturers, and others to prevent diversion of these dangerous drugs. For example, Defendant Cardinal claims that: "We challenge ourselves to best utilize our assets, expertise and influence to make our communities stronger and our world more sustainable, while governing our activities as a good corporate citizen in compliance with all regulatory requirements and with a belief that doing 'the right thing' serves everyone." Defendant Cardinal likewise claims to "lead [its] industry in anti-diversion strategies to help prevent opioids from being diverted for misuse or abuse." Along the same lines, it claims to "maintain a sophisticated, state-of-the-art program to identify, block and report to regulators those orders of prescription controlled medications that do not meet [its] strict criteria." Defendant Cardinal also promotes funding it provides for "Generation Rx," which funds grants related to prescription drug misuse. A Cardinal executive recently claimed

that Cardinal uses “advanced analytics” to monitor its supply chain; Cardinal assured the public it was being “as effective and efficient as possible in constantly monitoring, identifying, and eliminating any outside criminal activity.”

559. Along the same lines, Defendant McKesson publicly claims that its “customized analytics solutions track pharmaceutical product storage, handling and dispensing in real time at every step of the supply chain process,” creating the impression that McKesson uses this tracking to help prevent diversion. Defendant McKesson has also publicly stated that it has a “best-in-class controlled substance monitoring program to help identify suspicious orders,” and claimed it is “deeply passionate about curbing the opioid epidemic in our country.”

560. Defendant AmerisourceBergen, too, has taken the public position that it is “work[ing] diligently to combat diversion and [is] working closely with regulatory agencies and other partners in pharmaceutical and healthcare delivery to help find solutions that will support appropriate access while limiting misuse of controlled substances.” A company spokeswoman also provided assurance that: “At AmerisourceBergen, we are committed to the safe and efficient delivery of controlled substances to meet the medical needs of patients.”

561. Moreover, in furtherance of their effort to affirmatively conceal their conduct and avoid detection, the Defendants, through their trade associations, HDMA and NACDS, filed an *amicus* brief in *Masters Pharmaceuticals*, which made the following statements:²³¹

- a. “HDMA and NACDS members not only have statutory and regulatory responsibilities to guard against diversion of controlled prescription drugs, but undertake such efforts as responsible members of society.”
- b. “Distributors take seriously their duty to report suspicious orders, utilizing both computer algorithms and human review to detect suspicious orders

²³¹ Brief for HDMA and NACDS, *Masters Pharms., Inc. v. U.S. Drug Enf’t Admin.*, Case No. 15-1335, 2016 WL 1321983 (D.C. Cir. April 4, 2016), at *3-4, *25.

based on the generalized information that *is* available to them in the ordering process.”

562. Through the above statements made on their behalf by their trade associations, and other similar statements assuring their continued compliance with their legal obligations, the Defendants not only acknowledged that they understood their obligations under the law, but they further affirmed that their conduct was in compliance with those obligations.

563. Defendant Mallinckrodt similarly claims to be “committed . . . to fighting opioid misuse and abuse,” and further asserts that: “In key areas, our initiatives go beyond what is required by law. We address diversion and abuse through a multidimensional approach that includes educational efforts, monitoring for suspicious orders of controlled substances,”

564. Other Marketing Defendants also misrepresented their compliance with their legal duties and their cooperation with law enforcement. Purdue serves as a hallmark example of such wrongful conduct. Purdue deceptively and unfairly failed to report to authorities illicit or suspicious prescribing of its opioids, even as it has publicly and repeatedly touted its “constructive role in the fight against opioid abuse,” including its commitment to ADF opioids and its “strong record of coordination with law enforcement.”²³²

565. At the heart of Purdue’s public outreach is the claim that it works hand-in-glove with law enforcement and government agencies to combat opioid abuse and diversion. Purdue has consistently trumpeted this partnership since at least 2008, and the message of close cooperation is in virtually all of Purdue’s recent pronouncements in response to the opioid abuse.

²³² *Setting The Record Straight On OxyContin’s FDA-Approved Label*, Purdue Pharma (May 5, 2016) <http://www.purduepharma.com/news-media/get-the-facts/setting-the-record-straight-on-oxycontin-fda-approved-label/>; *Setting The Record Straight On Our Anti-Diversion Programs*, Purdue Pharma (July 11, 2016) <http://www.purduepharma.com/news-media/get-the-facts/setting-the-record-straight-on-our-anti-diversion-programs/>.

566. Touting the benefits of ADF opioids, Purdue's website asserts: "[W]e are acutely aware of the public health risks these powerful medications create That's why we work with health experts, law enforcement, and government agencies on efforts to reduce the risks of opioid abuse and misuse" ²³³ Purdue's statement on "Opioids Corporate Responsibility" likewise states that "[f]or many years, Purdue has committed substantial resources to combat opioid abuse by partnering with . . . communities, law enforcement, and government." ²³⁴ And, responding to criticism of Purdue's failure to report suspicious prescribing to government regulatory and enforcement authorities, the website similarly proclaims that Purdue "ha[s] a long record of close coordination with the DEA and other law enforcement stakeholders to detect and reduce drug diversion." ²³⁵

567. These public pronouncements create the misimpression that Purdue is proactively working with law enforcement and government authorities nationwide to root out drug diversion, including the illicit prescribing that can lead to diversion. It aims to distance Purdue from its past conduct in deceptively marketing opioids and make its current marketing seem more trustworthy and truthful.

568. Public statements by the Defendants and their associates created the false and misleading impression to regulators, prescribers, and the public that the Defendants rigorously carried out their legal duties, including their duty to report suspicious orders and exercise due

²³³ *Opioids With Abuse-Deterrent Properties*, Purdue Pharma <http://www.purduepharma.com/healthcare-professionals/responsible-use-of-opioids/opioids-with-abuse-deterrent-properties/>.

²³⁴ *Opioids & Corporate Responsibility*, <http://www.purduepharma.com/news-media/opioids-corporate-responsibility/>.

²³⁵ *Setting The Record Straight On Our Anti-Diversion Programs*, Purdue Pharma (July 11, 2016) at <http://www.purduepharma.com/news-media/get-the-facts/setting-the-record-straight-on-our-anti-diversion-programs/>. Contrary to its public statements, Purdue seems to have worked behind the scenes to push back against law enforcement.

diligence to prevent diversion of these dangerous drugs, and further created the false impression that these Defendants also worked voluntarily to prevent diversion as a matter of corporate responsibility to the communities their business practices would necessarily impact.

7. **The National Retail Pharmacies Were on Notice of and Contributed to Illegal Diversion of Prescription Opioids**

569. National retail pharmacy chains earned enormous profits by flooding the country with prescription opioids.²³⁶ They were keenly aware of the oversupply of prescription opioids through the extensive data and information they developed and maintained as both distributors and dispensaries. Yet, instead of taking any meaningful action to stem the flow of opioids into communities, they continued to participate in the oversupply and profit from it.

570. Each of the National Retail Pharmacies does substantial business throughout the United States. This business includes the distribution and dispensing of prescription opioids.

571. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

²³⁶ The allegations contained in this Second Amended Complaint are based, in part, on discovery that is in its infancy. The U.S. Department of Justice, Drug Enforcement Administration's motion for extension of time for the production of suspicious order reports was granted on April 20, 2018 extending the DEA's production date until May 18, 2018. The transactional ARCOS data was produced to Plaintiff less than a month before this filing and has not yet been fully reviewed and synthesized. Moreover, the limited documents produced in *City of Chicago v. Purdue Pharma, L.P.*, No. 14 CV 4361 (N.D. Ill.), related only to claims against manufacturers and were provided to Plaintiff a little over a month prior to this filing. Accordingly, Plaintiff reserves its right to further amend this complaint to add supporting allegations, claims, and parties.

572. The National Retail Pharmacies developed and maintained extensive data on opioids they distributed and dispensed. Through this data, National Retail Pharmacies had direct knowledge of patterns and instances of improper distribution, prescribing, and use of prescription opioids in communities throughout the country, and in Ohio in particular. They used the data to evaluate their own sales activities and workforce. On information and belief, the National Retail Pharmacies also provided Defendants with data regarding, *inter alia*, individual doctors in exchange for rebates or other forms of consideration. The National Retail Pharmacies' data is a valuable resource that they could have used to help stop diversion, but failed to do so.

a. The National Retail Pharmacies Have a Duty to Prevent Diversion

573. Each participant in the supply chain of opioid distribution, including the National Retail Pharmacies, is responsible for preventing diversion of prescription opioids into the illegal market by, among other things, monitoring, and reporting suspicious activity.

574. The National Retail Pharmacies, like manufacturers and other distributors, are registrants under the CSA. 21 C.F.R. § 1301.11. Under the CSA, pharmacy registrants are required to “provide effective controls and procedures to guard against theft and diversion of controlled substances.” See 21 C.F.R. § 1301.71(a). In addition, 21 C.F.R. § 1306.04(a) states, “[t]he responsibility for the proper prescribing and dispensing of controlled substances is upon the prescribing practitioner, but a corresponding responsibility rests with the pharmacist who fills the prescription.” Because pharmacies themselves are registrants under the CSA, the duty to prevent diversion lies with the pharmacy entity, not the individual pharmacist alone.

575. The DEA, among others, has provided extensive guidance to pharmacies concerning their duties to the public. The guidance advises pharmacies how to identify suspicious orders and other evidence of diversion.

576. Suspicious pharmacy orders include orders of unusually large size, orders that are disproportionately large in comparison to the population of a community served by the pharmacy, orders that deviate from a normal pattern and/or orders of unusual frequency and duration, among others.

577. Additional types of suspicious orders include: (1) prescriptions written by a doctor who writes significantly more prescriptions (or in larger quantities or higher doses) for controlled substances compared to other practitioners in the area; (2) prescriptions which should last for a month in legitimate use, but are being refilled on a shorter basis; (3) prescriptions for antagonistic drugs, such as depressants and stimulants, at the same time; (4) prescriptions that look “too good” or where the prescriber’s handwriting is too legible; (5) prescriptions with quantities or doses that differ from usual medical usage; (6) prescriptions that do not comply with standard abbreviations and/or contain no abbreviations; (7) photocopied prescriptions; or (8) prescriptions containing different handwriting. Most of the time, these attributes are not difficult to detect and should be easily recognizable by pharmacies.

578. Suspicious pharmacy orders are red flags for if not direct evidence of diversion.

579. Other signs of diversion can be observed through data gathered, consolidated, and analyzed by the National Retail Pharmacies themselves. That data allows them to observe patterns or instances of dispensing that are potentially suspicious, of oversupply in particular stores or geographic areas, or of prescribers or facilities that seem to engage in improper prescribing.

580. According to industry standards, if a pharmacy finds evidence of prescription diversion, the local Board of Pharmacy and DEA must be contacted.

581. Despite their legal obligations as registrants under the CSA, the National Retail Pharmacies allowed widespread diversion to occur—and they did so knowingly.

582. Performance metrics and prescription quotas adopted by the National Retail Pharmacies for their retail stores contributed to their failure. Under CVS's Metrics System, for example, pharmacists are directed to meet high goals that make it difficult, if not impossible, to comply with applicable laws and regulations. There is no measurement for pharmacy accuracy or customer safety. Moreover, the bonuses for pharmacists are calculated, in part, on how many prescriptions that pharmacist fills within a year. The result is both deeply troubling and entirely predictable: opioids flowed out of National Retail Pharmacies and into communities throughout the country. The policies remained in place even as the epidemic raged.

583. Upon information and belief, this problem was compounded by the Pharmacies' failure to adequately train their pharmacists and pharmacy technicians on how to properly and adequately handle prescriptions for opioid painkillers, including what constitutes a proper inquiry into whether a prescription is legitimate, whether a prescription is likely for a condition for which the FDA has approved treatments with opioids, and what measures and/or actions to take when a prescription is identified as phony, false, forged, or otherwise illegal, or when suspicious circumstances are present, including when prescriptions are procured and pills supplied for the purpose of illegal diversion and drug trafficking.

584. Upon information and belief, the National Retail Pharmacies also failed to adequately use data available to them to identify doctors who were writing suspicious numbers of prescriptions and/or prescriptions of suspicious amounts of opioids, or to adequately use data available to them to do statistical analysis to prevent the filling of prescriptions that were illegally diverted or otherwise contributed to the opioid crisis.

585. Upon information and belief, the National Retail Pharmacies failed to analyze: (a) the number of opioid prescriptions filled by individual pharmacies relative to the population of the pharmacy's community; (b) the increase in opioid sales relative to past years; (c) the number of opioid prescriptions filled relative to other drugs; and (d) the increase in annual opioid sales relative to the increase in annual sales of other drugs.

586. Upon information and belief, the National Retail Pharmacies also failed to conduct adequate internal or external audits of their opioid sales to identify patterns regarding prescriptions that should not have been filled and to create policies accordingly, or if they conducted such audits, they failed to take any meaningful action as a result.

587. Upon information and belief, the National Retail Pharmacies also failed to effectively respond to concerns raised by their own employees regarding inadequate policies and procedures regarding the filling of opioid prescriptions.

588. The National Retail Pharmacies were, or should have been, fully aware that the quantity of opioids being distributed and dispensed by them was untenable, and in many areas patently absurd; yet, they did not take meaningful action to investigate or to ensure that they were complying with their duties and obligations under the law with regard to controlled substances.

b. Multiple Enforcement Actions against the National Retail Pharmacies Confirms their Compliance Failures.

589. The National Retail Pharmacies have long been on notice of their failure to abide by state and federal law and regulations governing the distribution and dispensing of prescription opioids. Indeed, several of the National Retail Pharmacies have been repeatedly penalized for their illegal prescription opioid practices. Upon information and belief, based upon the

widespread nature of these violations, these enforcement actions are the product of, and confirm, national policies and practices of the National Retail Pharmacies.

i. CVS

590. CVS is one of the largest companies in the world, with annual revenue of more than \$150 billion. According to news reports, it manages medications for nearly 90 million customers at 9,700 retail locations. CVS could be a force for good in connection with the opioid crisis, but like other Defendants, CVS sought profits over people.

591. CVS is a repeat offender and recidivist: the company has paid fines totaling over \$40 million as the result of a series of investigations by the DEA and the United States Department of Justice (“DOJ”). It nonetheless treated these fines as the cost of doing business and has allowed its pharmacies to continue dispensing opioids in quantities significantly higher than any plausible medical need would require, and to continue violating its recordkeeping and dispensing obligations under the CSA.

592. As recently as July 2017, CVS entered into a \$5 million settlement with the U.S. Attorney’s Office for the Eastern District of California regarding allegations that its pharmacies failed to keep and maintain accurate records of Schedule II, III, IV, and V controlled substances.²³⁷

593. This fine was preceded by numerous others throughout the country.

²³⁷ Press Release, U.S. Dep’t of Just., U.S. Attorney’s Office E. Dist. of Cal., *CVS Pharmacy Inc. Pays \$5M to Settle Alleged Violations of the Controlled Substance Act*, (July 11, 2017), <https://www.justice.gov/usao-edca/pr/cvs-pharmacy-inc-pays-5m-settle-alleged-violations-controlled-substance-act>.

594. In February 2016, CVS paid \$8 million to settle allegations made by the DEA and the DOJ that from 2008-2012, CVS stores and pharmacists in Maryland violated their duties under the CSA and filling prescriptions with no legitimate medical purpose.²³⁸

595. In October 2016, CVS paid \$600,000 to settle allegations by the DOJ that stores in Connecticut failed to maintain proper records in accordance with the CSA.²³⁹

596. In September 2016, CVS entered into a \$795,000 settlement with the Massachusetts Attorney General wherein CVS agreed to require pharmacy staff to access the state's prescription monitoring program website and review a patient's prescription history before dispensing certain opioid drugs.²⁴⁰

597. In June 2016, CVS agreed to pay the DOJ \$3.5 million to resolve allegations that 50 of its stores violated the CSA by filling forged prescriptions for controlled substances—mostly addictive painkillers—more than 500 times between 2011 and 2014.²⁴¹

598. In August 2015, CVS entered into a \$450,000 settlement with the U.S. Attorney's Office for the District of Rhode Island to resolve allegations that several of its Rhode Island

²⁴¹ Press Release, U.S. Dep't of Just., U.S. Attorney's Office Dist. of Mass., *CVS to Pay \$3.5 Million to Resolve Allegations that Pharmacists Filled Fake Prescriptions*, (June 30, 2016), <https://www.justice.gov/usao-ma/pr/cvs-pay-35-million-resolve-allegations-pharmacists-filled-fake-prescriptions>.

stores violated the CSA by filling invalid prescriptions and maintaining deficient records. The United States alleged that CVS retail pharmacies in Rhode Island filled a number of forged prescriptions with invalid DEA numbers, and filled multiple prescriptions written by psychiatric nurse practitioners for hydrocodone, despite the fact that these practitioners were not legally permitted to prescribe that drug. Additionally, the government alleged that CVS had recordkeeping deficiencies.²⁴²

599. In May 2015, CVS agreed to pay a \$22 million penalty following a DEA investigation that found that employees at two pharmacies in Sanford, Florida, had dispensed prescription opioids, “based on prescriptions that had not been issued for legitimate medical purposes by a health care provider acting in the usual course of professional practice. CVS also acknowledged that its retail pharmacies had a responsibility to dispense only those prescriptions that were issued based on legitimate medical need.”²⁴³

600. In September 2014, CVS agreed to pay \$1.9 million in civil penalties to resolve allegations it filled prescriptions written by a doctor whose controlled-substance registration had expired.²⁴⁴

²⁴² Press Release, U.S. Dep’t of Just., U.S. Attorney’s Office Dist. of R.I., Drug Diversion Claims Against CVS Health Corp. Resolved With \$450,000 Civil Settlement, (Aug. 10, 2015), <https://www.justice.gov/usao-ri/pr/drug-diversion-claims-against-cvs-health-corp-resolved-450000-civil-settlement>.

²⁴³ Press Release, U.S. Dep’t of Just., U.S. Attorney’s Office M. Dist. of Fla., United States Reaches \$22 Million Settlement Agreement With CVS For Unlawful Distribution of Controlled Substances, (May 13, 2015), <https://www.justice.gov/usao-mdfl/pr/united-states-reaches-22-million-settlement-agreement-cvs-unlawful-distribution>.

²⁴⁴ Patrick Danner, H-E-B, CVS Fined Over Prescriptions, San Antonio Express-News <http://www.expressnews.com/business/local/article/H-E-BCVS-fined-over-prescriptions-5736554.php>. (Last Updated Sept. 5, 2014, 8:00 PM).

601. In August 2013, CVS was fined \$350,000 by the Oklahoma Pharmacy Board for improperly selling prescription narcotics in at least five locations in the Oklahoma City metropolitan area.²⁴⁵

602. Dating back to 2006, CVS retail pharmacies in Oklahoma and elsewhere intentionally violated the CSA by filling prescriptions signed by prescribers with invalid DEA registration numbers.²⁴⁶

ii. Walgreens

603. Walgreens is the second-largest pharmacy store chain in the United States behind CVS, with annual revenue of more than \$118 billion. According to its website, Walgreens operates more than 8,100 retail locations and filled 990 million prescriptions on a 30-day adjusted basis in fiscal 2017.

604. Walgreens also has been penalized for serious and flagrant violations of the CSA. Indeed, Walgreens agreed to the largest settlement in DEA history—\$80 million—to resolve allegations that it committed an unprecedented number of recordkeeping and dispensing violations of the CSA, including negligently allowing controlled substances such as oxycodone and other prescription opioids to be diverted for abuse and illegal black market sales.²⁴⁷

²⁴⁵ Andrew Knittle, *Oklahoma Pharmacy Board Stays Busy, Hands Out Massive Fines at Times*, NewsOK <http://newsok.com/article/5415840>. (Last Updated May 4, 2015, 5:00 PM).

²⁴⁶ Press Release, U.S. Dep't. of Just., U.S. Attorney's Office W. Dist. of Okla., CVS to Pay \$11 Million To Settle Civil Penalty Claims Involving Violations of Controlled Substances Act, (Apr. 3, 2013), <https://www.justice.gov/usao-wdok/pr/cvs-pay-11-million-settle-civil-penalty-claims-involving-violations-controlled>.

²⁴⁷ Press Release, U.S. Dep't of Just., U.S. Attorney's Office S. Dist. of Fla., *Walgreens Agrees To Pay A Record Settlement Of \$80 Million For Civil Penalties Under The Controlled Substances Act*, (June 11, 2013), <https://www.justice.gov/usao-sdfl/pr/walgreens-agrees-pay-record-settlement-80-million-civil-penalties-under-controlled>.

605. The settlement resolved investigations into and allegations of CSA violations in Florida, New York, Michigan, and Colorado that resulted in the diversion of millions of opioids into illicit channels.

606. Walgreens' Florida operations at issue in this settlement highlight its egregious conduct regarding diversion of prescription opioids. Walgreens' Florida pharmacies each allegedly ordered more than one million dosage units of oxycodone in 2011—more than ten times the average amount.²⁴⁸

607. They increased their orders over time, in some cases as much as 600% in the space of just two years, including, for example, supplying a town of 3,000 with 285,800 orders of oxycodone in a one-month period. Yet Walgreens corporate officers turned a blind eye to these abuses. In fact, corporate attorneys at Walgreens suggested, in reviewing the legitimacy of prescriptions coming from pain clinics, that “if these are legitimate indicators of inappropriate prescriptions perhaps we should consider not documenting our own potential noncompliance,” underscoring Walgreens' attitude that profit outweighed compliance with the CSA or the health of communities.²⁴⁹

608. Defendant Walgreens' settlement with the DEA stemmed from the DEA's investigation into Walgreens' distribution center in Jupiter, Florida, which was responsible for significant opioid diversion in Florida. According to the Order to Show Cause, Defendant Walgreens' corporate headquarters pushed to increase the number of oxycodone sales to Walgreens' Florida pharmacies, and provided bonuses for pharmacy employees based on number

²⁴⁸ Appendix B of Order to Show Cause and Immediate Suspension of Registration, *In the Matter of Walgreens Co.* (Drug Enf't Admin. Sept. 13, 2012), https://www.dea.gov/divisions/mia/2013/mia061113_appendixb.pdf.

²⁴⁹ *Id.*

of prescriptions filled at the pharmacy in an effort to increase oxycodone sales. In July 2010, Defendant Walgreens ranked all of its Florida stores by number of oxycodone prescriptions dispensed in June of that year, and found that the highest-ranking store in oxycodone sales sold almost 18 oxycodone prescriptions per day. All of these prescriptions were filled by the Jupiter Center.²⁵⁰

609. Walgreens has also settled with a number of state attorneys general, including West Virginia (\$575,000) and Massachusetts (\$200,000).²⁵¹

610. The Massachusetts Attorney General's Medicaid Fraud Division found that, from 2010 through most of 2015, multiple Walgreens stores across the state failed to monitor the opioid use of some Medicaid patients who were considered high-risk.

611. In January 2017, an investigation by the Massachusetts Attorney General found that some Walgreens pharmacies failed to monitor patients' drug use patterns and didn't use sound professional judgment when dispensing opioids and other controlled substances—despite the context of soaring overdose deaths in Massachusetts. Walgreens agreed to pay \$200,000 and follow certain procedures for dispensing opioids.²⁵²

iii. Rite Aid

612. With approximately 4,600 stores in 31 states and the District of Columbia, Rite Aid is the largest drugstore chain on the East Coast and the third-largest in the United States, with annual revenue of more than \$21 billion.

²⁵⁰ *Id.*

²⁵¹ Felice J. Freyer, *Walgreens to Pay \$200,000 Settlement for Lapses with Opioids*, APhA (Jan. 25, 2017), <https://www.pharmacist.com/article/walgreens-pay-200000-settlement-lapses-opioids>.

²⁵² *Id.*

613. In 2009, as a result of a multi-jurisdictional investigation by the DOJ, Rite Aid and nine of its subsidiaries in eight states were fined \$5 million in civil penalties for its violations of the CSA.²⁵³

614. The investigation revealed that from 2004 onwards, Rite Aid pharmacies across the country had a pattern of non-compliance with the requirements of the CSA and federal regulations that lead to the diversion of prescription opioids in and around the communities of the Rite Aid pharmacies investigated. Rite Aid also failed to notify the DEA of losses of controlled substances in violation of 21 USC 842(a)(5) and 21 C.F.R 1301.76(b).²⁵⁴

615. Numerous state and federal drug diversion prosecutions have occurred in which prescription opioid pills were procured from National Retail Pharmacies. The allegations in this Complaint do not attempt to identify all these prosecutions, and the information above is merely by way of example.

616. The litany of state and federal actions against the National Retail Pharmacies demonstrate that they routinely, and as a matter of standard operation procedure, violated their legal obligations under the CSA and other laws and regulations that govern the distribution and dispensing of prescription opioids.

617. Throughout the country and in Ohio in particular, the National Retail Pharmacies were or should have been aware of numerous red flags of potential suspicious activity and diversion.

²⁵³ Press Release, Dep't of Just., *Rite Aid Corporation and Subsidiaries Agree to Pay \$5 Million in Civil Penalties to Resolve Violations in Eight States of the Controlled Substances Act*, U.S. Dep't of Just. (Jan. 12, 2009), <https://www.justice.gov/opa/pr/rite-aid-corporation-and-subsidiaries-agree-pay-5-million-civil-penalties-resolve-violations>.

²⁵⁴ *Id.*

618. On information and belief, from the catbird seat of their retail pharmacy operations, the National Retail Pharmacies knew or reasonably should have known about the disproportionate flow of opioids into Ohio and the operation of “pill mills” that generated opioid prescriptions that, by their quantity or nature, were red flags for if not direct evidence of illicit supply and diversion. Additional information was provided by news reports, and state and federal regulatory actions, including prosecutions of pill mills in the area.

619. On information and belief, the National Retail Pharmacies knew or reasonably should have known about the devastating consequences of the oversupply and diversion of prescription opioids, including spiking opioid overdose rates in Plaintiff’s community.

620. On information and belief, because of (among other sources of information) regulatory and other actions taken against the National Retail Pharmacies directly, actions taken against others pertaining to prescription opioids obtained from their retail stores, complaints and information from employees and other agents, and the massive volume of opioid prescription drug sale data that they developed and monitored, the National Retail Pharmacies were well aware that their distribution and dispensing activities fell far short of legal requirements.

621. The National Retail Pharmacies’ actions and omission in failing to effectively prevent diversion and failing to monitor, report, and prevent suspicious orders have contributed significantly to the opioid crisis by enabling, and failing to prevent, the diversion of opioids.

F. The Opioids the Defendants Sold Migrated into Other Jurisdictions

622. As the demand for prescription opioids grew, fueled by their potency and purity, interstate commerce flourished: opioids moved from areas of high supply to areas of high demand, traveling across state lines in a variety of ways.

623. First, prescriptions written in one state would, under some circumstances, be filled in a different state. But even more significantly, individuals transported opioids from one jurisdiction specifically to sell them in another.

624. When authorities in states such as Ohio and Kentucky cracked down on opioid suppliers, out-of-state suppliers filled the gaps. Florida in particular assumed a prominent role, as its lack of regulatory oversight created a fertile ground for pill mills. Residents of Ohio and other states would simply drive to Florida, stock up on pills from a pill mill, and transport them back to home to sell. The practice became so common that authorities dubbed these individuals “prescription tourists.”

625. The facts surrounding numerous criminal prosecutions illustrate the common practice. For example, one man from Warren county, Ohio, sentenced to four years for transporting prescription opioids from Florida to Ohio, explained that he could get a prescription for 180 pills from a quick appointment in West Palm Beach, and that back home, people were willing to pay as much as \$100 a pill—ten times the pharmacy price.²⁵⁵ In Columbus, Ohio, a DEA investigation led to the 2011 prosecution of sixteen individuals involved in the “oxycodone pipeline between Ohio and Florida.”²⁵⁶ When officers searched the Ohio home of the alleged leader of the group, they found thousands of prescriptions pills, including oxycodone and hydrocodone, and \$80,000 in cash. In 2015, another Columbus man was sentenced for the same

conduct—paying couriers to travel to Florida and bring back thousands of prescription opioids, and, in the words of U.S. District Judge Michael Watson, contributing to a “pipeline of death.”²⁵⁷

626. Outside of Atlanta, Georgia, four individuals pled guilty in 2015 to operating a pill mill; the U.S. attorney’s office found that most of the pain clinic’s customers came from other states, including North Carolina, Kentucky, Tennessee, Ohio, South Carolina, and Florida.²⁵⁸ Another investigation in Atlanta led to the 2017 conviction of two pharmacists who dispensed opioids to customers of a pill mill across from the pharmacy; many of those customers were from other states, including Ohio and Alabama.²⁵⁹

627. In yet another case, defendants who operated a pill mill in south Florida within Broward County were tried in eastern Kentucky based on evidence that large numbers of customers transported oxycodone back to the area for both use and distribution by local drug trafficking organizations. As explained by the Sixth Circuit in its decision upholding the venue decision, “[d]uring its existence, the clinic generated over \$10 million in profits. To earn this sum required more business than the local market alone could provide. Indeed, only about half of the [Pain Center of Broward]’s customers came from Florida. Instead, the clinic grew prosperous on a flow of out-of-state traffic, with prospective patients traveling to the clinic from

²⁵⁹ [Press Release, U.S. Dep’t of Just., U.S. Atty’s Off., Northern District of Ga., Two Pharmacists Convicted for Illegally Dispensing to Patients of a Pill Mill](https://gdna.georgia.gov/press-releases/2017-03-30/two-pharmacists-convicted-illegally-dispensing-patients-pill-mill), (Mar. 29, 2017), <https://gdna.georgia.gov/press-releases/2017-03-30/two-pharmacists-convicted-illegally-dispensing-patients-pill-mill>.

locations far outside Ft. Lauderdale, including from Ohio, Georgia, and Massachusetts.”²⁶⁰ The court further noted that the pill mill “gained massive financial benefits by taking advantage of the demand for oxycodone by Kentucky residents.”²⁶¹

628. The route from Florida and Georgia to Kentucky, Ohio, and West Virginia was so well traveled that it became known as the Blue Highway, a reference to the color of the 30mg Roxicodone pills manufactured by Mallinckrodt.²⁶² Eventually, as police began to stop vehicles with certain out-of-state tags cruising north on I-75, the prescription tourists adapted. They rented cars just over the Georgia state line to avoid the telltale out-of-state tag.²⁶³ If they were visiting multiple pill mills on one trip, they would stop at FedEx between clinics to mail the pills home and avoid the risk of being caught with multiple prescriptions if pulled over.²⁶⁴ Or they avoided the roads altogether: Allegiant Air, which offered several flights between Appalachia and Florida, was so popular with drug couriers that it was nicknamed the “Oxy Express.”²⁶⁵

629. While the I-75 corridor was well utilized, prescription tourists also came from other states. The director of the Georgia drugs and narcotics agency observed that visitors to Georgia pill mills come from as far away as Arizona and Nebraska.²⁶⁶

630. Similar pipelines developed in other regions of the country. For example, the I-95 corridor was another transport route for prescription pills. As the director of the Maine Drug Enforcement Agency explained, the oxycodone in Maine was coming up extensively from Florida, Georgia and California.²⁶⁷ And, according to the FBI, Michigan plays an important role in the opioid epidemic in other states; opioids prescribed in Michigan are often trafficked down to West Virginia, Ohio, and Kentucky.²⁶⁸

631. Along the West Coast, over a million pills were transported from the Lake Medical pain clinic in Los Angeles and cooperating pharmacies to the City of Everett, Washington.²⁶⁹ Couriers drove up I-5 through California and Oregon, or flew from Los Angeles to Seattle.²⁷⁰ The Everett-based dealer who received the pills from southern California wore a diamond necklace in the shape of the West Coast states with a trail of green gemstones—the color of 80-milligram OxyContin—connecting Los Angeles and Washington state.²⁷¹

²⁷¹ *Id.*

this State, “[a] system shall be designed and operated to disclose orders for controlled substances and other dangerous drugs subject to abuse.” Ohio Administrative Code (“O.A.C.”) § 4729-9-16(H); R.C. 4729.52 (requiring licensed wholesale distributors to comply with Ohio Board of Pharmacy security regulations); [REDACTED]

[REDACTED]
[REDACTED] accord 21 U.S.C.

§ 823 (mandating that registration be consistent with the public interest, which, in turn, requires “maintenance of effective controls against diversion . . . into other than lawful medical, scientific, or industrial channels” and “compliance with applicable State and local law”); 21 C.F.R. § 1301.74 (imposing duty to monitor, detect, investigate, refuse to fill, and report suspicious orders under federal law).

635. Ohio regulations further mandate that suspicious orders, defined as unusual in size or frequency or deviation from buying patterns, be reported to the Ohio Board of Pharmacy: “The wholesaler shall inform the state board of pharmacy of suspicious orders for drugs when discovered. Suspicious orders are those which, in relation to the wholesaler’s records as a whole, are of unusual size, unusual frequency, or deviate substantially from established buying patterns.” O.A.C. § 4729-9-16(H)(1)(e) *et seq.* (emphasis added); *see also id.* at §§ 4729-9-12(G) & 4729-9-28(E). Any of the red flags identified by law trigger a duty to report, but this list is not exhaustive. Other factors—such as whether the order is skewed toward high dose pills, or orders that are skewed towards drugs valued for abuse, rather than other high-volume drugs, such as cholesterol medicines—also should alert distributors to potential problems. Distributors also have a duty to know their customers and the communities they serve. To the extent that, through this process of customer due diligence, a distributor observes suspicious

circumstances—such as cash transactions or young and seemingly healthy patients filling prescriptions for opioids at a pharmacy they supply—those observations can also trigger reasonable suspicion. A single order can warrant scrutiny, or it may be a pattern of orders, or an order that is unusual given the customer’s history or its comparison to other customers in the area.

636. Defendants were required by Ohio law to operate in compliance with federal laws, including the federal Controlled Substances Act (“CSA”), 21 U.S.C. § 801 *et seq.* and its implementing regulations. *See* O.A.C. §§ 4729-9-16(L) and 4729-9-28(I) (mandating that “[w]holesale drug distributors shall operate in compliance with applicable federal, state, and local laws and regulations”). Ohio Pharmacy Board regulations further mandate that “[a] system shall be designed and operated to disclose orders for controlled substances and other dangerous drugs subject to abuse,” and that suspicious orders, defined as unusual in size or frequency or deviation from buying patterns, be reported to the Ohio Board of Pharmacy. O.A.C. §§ 4729-9-16(H); 4729-9-12(G); 4729-9-28(E).

637. A number of Ohio counties had an opioid prescription rate exceeding their population, and at times well in excess of their population, for extended periods of time.

638. Given this, and the additional red flags described below, Marketing and Distributor Defendants should have been on notice that the diversion of opioids was likely occurring in Ohio communities, should have investigated, ceased filling orders for opioids, and reported potential diversion to law enforcement.

639. This same publicly available data suggests distribution of opioids in Ohio communities exceeded reasonable medical use and that opioids were likely diverted in these areas. For example, from 2010 through 2015, the Distributor Defendants are estimated to have

sold 49,221,226 opioids in Scioto County, which has a population of 79,499. As another example, from 2010 to 2016, Summit County - with a population of 542,000 residents -- averaged 36.5 million doses of opioids dispensed per year, with a high of 39.5 million in 2012. Per opioid user, this is an average of 284 opioids per year and 67 opioids per person per year, both greater than the state average, an already high baseline given Ohio's unfortunate placement at the epicenter of the opioid crisis. Similarly, from 2010 through 2015, the Distributor Defendants are estimated to have sold 16,523,968 opioids in Pike County, which has a population of 28,709. These figures support the inference that there was a greater distribution of opioids than could be justified by legitimate medical need. The volume of opioids distributed in Ohio communities, including but not limited to those described above, is so high as to raise a red flag that not all of the prescriptions being ordered could be for legitimate medical uses.

640. In addition, prescribers in Ohio have been convicted of crimes involving drug diversion. Upon information and belief, these prescribers, and the pharmacies at which their patients filled prescriptions for opioids, yielded orders of unusual size, frequency, or deviation, or raised other warning signs that should have alerted Marketing and Distributor Defendants not only to an overall oversupply in Plaintiff's community, but specific instances of diversion.

641. In addition, the increase in fatal overdoses from prescription opioids has been widely publicized for years. Ohio, in particular, has faced a spike in fatal drug overdoses, the majority of which are attributable to prescription opioids or the illicit opioids that patients often began abusing after becoming addicted to prescription opioids. The CDC estimates that for every opioid-related death, there are 733 non-medical users. Marketing and Distributor Defendants thus had every reason to believe that illegal diversion was occurring in Plaintiff's community.

642. Not only have individual prescribers or pharmacies faced charges related to diversion, pill mills that, upon information and belief, the Defendants also failed to report or cease supplying have been discovered and shut down. An epidemiological report from the Ohio Governor's Cabinet opiate action team cited the shutdown of southern Ohio pill mills as one of the chief factors in an increase throughout the state in heroin overdose rates (which, as explained below, is the drug turned to by prescription opioid users when those drugs are no longer available or too expensive). Consistent with this observed statewide trend, Ohio communities have seen a spike in heroin overdoses.

643. Based upon all of these red flags, it can be fairly inferred that Defendants had information about suspicious orders that they did not report, and also failed to exercise due diligence before filling orders from which drugs were diverted into illicit uses in communities across Ohio.

644. Each of the Defendants disregarded their reporting and due diligence obligations under federal and Ohio law. Instead, they consistently failed to report or suspend illicit orders, deepening the crisis of opioid abuse, addiction, and death in Ohio.

2. The Devastating Effects of the Opioid Crisis in Ohio

645. The Marketing Defendants' misrepresentations prompted Ohio health care providers to prescribe, patients to take, and payors to cover opioids for the treatment of chronic pain. Through their marketing, the Marketing Defendants overcame barriers to widespread prescribing of opioids for chronic pain with deceptive messages about the risks and benefits of long-term opioid use. Defendants compounded these harms by supplying opioids beyond even what this expanded market could bear, funneling so many opioids into Ohio communities that they could only have been delivering opioids for diversion and illicit use. The massive amount

of opioids that flooded into Ohio as a result of Defendants' wrongful conduct has devastated communities across the State.

646. Marketing Defendants' deceptive marketing substantially contributed to an explosion in the use of opioids across the country. Approximately 20% of the population between the ages of 30 and 44, and nearly 30% of the population over 45, have used opioids. Opioids are the most common treatment for chronic pain, and 20% of office visits now include the prescription of an opioid.

647. The sharp increase in opioid use resulting from Defendants' conduct has led directly to a dramatic increase in opioid abuse, addiction, overdose, and death throughout the United States, including in Ohio. Representing the NIH's National Institute of Drug Abuse in hearings before the Senate Caucus on International Narcotics Control in May 2014, Dr. Nora Volkow explained that "aggressive marketing by pharmaceutical companies" is "likely to have contributed to the severity of the current prescription drug abuse problem."

648. In August 2016, then U.S. Surgeon General Vivek Murthy published an open letter to physicians nationwide, enlisting their help in combating this "urgent health crisis" and linking that crisis to deceptive marketing. He wrote that the push to aggressively treat pain, and the "devastating" results that followed, had "coincided with heavy marketing to doctors [m]any of [whom] were even taught—incorrectly—that opioids are not addictive when prescribed for legitimate pain."

649. In a 2016 report, the CDC explained that "[o]pioid pain reliever prescribing has quadrupled since 1999 and has increased in parallel with [opioid] overdoses." Patients receiving opioid prescriptions for chronic pain account for the majority of overdoses. For these reasons,

the CDC concluded that efforts to rein in the prescribing of opioids for chronic pain are critical “to reverse the epidemic of opioid drug overdose deaths and prevent opioid-related morbidity.”

650. By continuing to fill and failing to report suspicious orders of opioids, Defendants have enabled an oversupply of opioids, which allows non-patients to become exposed to opioids, and facilitates access to opioids for both patients who could no longer access or afford prescription opioids and individuals struggling with addiction and relapse. Defendants had financial incentives to distribute higher volumes and not to report suspicious orders or guard against diversion. Wholesale drug distributors acquire pharmaceuticals, including opioids, from manufacturers at an established wholesale acquisition cost. Discounts and rebates from this cost may be offered by manufacturers based on market share and volume. As a result, higher volumes may decrease the cost per pill to distributors. Decreased cost per pill in turn, allows wholesale distributors to offer more competitive prices, or alternatively, pocket the difference as additional profit. Either way, the increased sales volumes result in increased profits.

651. Ohio has the twelfth highest opioid prescription rate in the country, with approximately 100.1 opioid prescriptions written for every 100 persons in Ohio.²⁷² As reported by the Ohio Department of Health, there were over 4.4 billion solid doses (excluding liquid doses) of prescription opioids dispensed in Ohio between 2011 and 2016.²⁷³

²⁷² See Leonard J. Paulozzi, M.D., *et al.*, *Vital Signs: Variation Among States in Prescribing of Opioid Pain Relievers and Benzodiazepines – United States, 2012*, Morbidity and Mortality Weekly Report, Centers for Disease Control and Prevention, U.S. Department of Health and Human Services (July 4, 2014). The combination of hydrocodone, oxycodone, and benzodiazepines is referred to as the “holy trinity” and significantly increases the risk of harm to those that abuse prescription pills.

²⁷³ Ohio Department of Health, 2016 Ohio Drug Overdose Data: General Findings; State of Ohio Board of Pharmacy, Ohio Automated Rx Reporting System, <https://www.odh.ohio.gov/-/media/ODH/ASSETS/Files/health/injury-prevention/2016-Ohio-Drug-Overdose-Report-FINAL.pdf> (last accessed on March 3, 2018).

652. Ohio's Prescription Drug Abuse Task Force has found that individuals addicted to prescription opioids often transition to heroin due to its lower cost, ready availability, and similar high. Similarly, a study by the Ohio Substance Abuse Monitoring Network reported on the connection between oxycodone use and heroin addiction, finding that "young new heroin abusers seeking treatment reported OxyContin abuse prior to becoming addicted to heroin," often after OxyContin became too expensive or difficult to obtain.

653. In fact, people who are addicted to prescription opioid painkillers are 40 times more likely to be addicted to heroin. The CDC identified addiction to prescription pain medication as the strongest risk factor for heroin addiction. Roughly 80% of heroin users previously used prescription opioids.

654. A recent, even deadlier problem stemming from the prescription opioid epidemic involves fentanyl—a powerful opioid prescribed for cancer pain or in hospital settings that has made its way into Ohio communities.

655. Carfentanil, a powerful derivative of fentanyl, has increasingly been found in heroin and fentanyl sold illicitly. Carfentanil is so strong that it is typically used in veterinary medicine to sedate large wild animals such as elephants, and has been researched as a chemical weapon. A dose the size of a grain of salt can be lethal in humans. In July of 2016, Akron saw 236 overdose cases in just 21 days, with at least 14 fatalities suspected to be linked to carfentanil. Because of carfentanil's potency, the Ohio Attorney General's website recommends that chemists and lab technicians who test for carfentanil use protective gear.

656. Ohio is among the states hardest hit by the opioid epidemic. As a recent report from Ohio State University summarizes, "[o]pioid addiction, abuse, and overdose deaths have

become the most pressing public health issue facing Ohio.” The rapid rise in overdose deaths in Ohio and the United States as a whole is unprecedented.

657. Statistics from various sources tell a consistent and tragic story. From 2000 to 2012, the State experienced a more than 366% increase in drug overdose deaths, a startling statistic driven largely by overdoses from prescription drugs. Measured from 2000 to 2015 the numbers are even more staggering: the rate of unintentional drug poisonings in Ohio jumped 642%, with the increase driven largely by opioid-related overdoses. In 2015, there were 3,050 Ohio overdose deaths, up 20.5 percent from 2,531 Ohio overdose deaths in 2014.²⁷⁴ In 2016, drug overdoses claimed the lives of 4,329 people across the state, a more than thirty percent increase in the number of lives lost over the previous year, according to data from the CDC. Reports from death certificates show that in 2016 alone, more than 86% of the fatalities involved opioids, including prescription opioids, heroin, and fentanyl.

658. Tragically, Ohio’s death rate has grown faster than the national rate.²⁷⁵ Ohio now “leads the country in drug overdose deaths per capita, a rate that continues to rise, overwhelming families, communities, and local governments across the state.”

²⁷⁴ See Governor’s Cabinet Opiate Action Team at <http://fightingopiateabuse.ohio.gov/>, (last visited September 17, 2017); Ohio Department of Health, 2016 Ohio Drug 2015 Ohio Drug Overdose Data: General Findings; State of Ohio Board of Pharmacy, Ohio Automated Rx Reporting System, <https://www.odh.ohio.gov/-/media/ODH/ASSETS/Files/health/injury-prevention/2015-Overdose-Data/2015-Ohio-Drug-Overdose-Data-Report-FINAL.pdf> (last accessed on March 3, 2018).

²⁷⁵ *Id.*

often. One local Ohio Medical Examiner reported, for example, that the presence of an investigator from that office has become so common that family members recognize them and know someone has died even before the news is broken to them. Many grieving families have been financially tapped out by the costs of repeated cycles of addiction treatment programs; others have lost hope and given up. This increasing number of cases also takes both a physical and mental toll on investigators and first responders.

665. Overdose deaths are only one consequence. Opioid addiction and misuse also result in an increase in emergency room visits, emergency responses, and emergency medical technicians' administration of naloxone, the antidote to opioid overdose. In fact, while the rate of opioid-related emergency department visits increased in almost all states from 2009 to 2014, Ohio experienced the greatest increase of any state in the nation, and the rate of opioid-related inpatient stays increased dramatically as well, according to data from the Agency of Healthcare Research and Quality. Ohio EMS personnel administered naloxone (or Narcan) more than 44,500 times in 2017 alone. This means that, on average, Ohio EMS personnel administered over 122 doses of naloxone every day in 2017 alone. This information, too, is likely understated, as only 72% of Ohio EMS agencies reported data for inclusion in the state's summary brief. Frequent opioid users are so familiar with the potential for overdose that many choose to use drugs in public places, such as Wal-Mart bathrooms, where they can be found and revived.

666. As communities have worked to save lives, the opioid epidemic has continued to outpace their efforts. Opioid addiction is now the primary reason that Ohioans seek substance abuse treatment. In 2014, 37% of admissions for drug abuse were associated with a primary diagnosis of opioid abuse or dependence. According to a 2015 poll, three in ten Ohio adults have family members or friends who have experienced problems as a result of abusing

prescription pain relievers, a steep rise from only a year earlier, and 2 in 10 Ohio adults had family or friends whom they described as experiencing problems from using heroin. Of these Ohioans, 4 in 10 knew someone who had overdosed due to a prescription opioid, and 6 in 10 knew someone who had overdosed on heroin.

667. Injury and illness in Ohio extends well beyond even overdoses and emergency response. According to the CDC, an increase in Hepatitis C in the United States is directly tied to intravenous injection of opioids. Once again, Ohio is no exception to this trend. The number of cases of chronic Hepatitis C in Ohio nearly tripled from 2011 to 2015, an increase that resulted largely from intravenous use of drugs, including OxyContin and other prescription painkillers, stemming from the opioid epidemic. The co-morbidity is sufficiently high that the Ohio Department of Health recommends that women of childbearing age who have tested positive for drug and dependence also receive screening for Hepatitis C and HIV.

668. The deceptive marketing, overprescribing, and oversupply of opioids also had a significant detrimental impact on children in Ohio. Young children have access to opioids, nearly all of which were prescribed or supplied to adults in their household, and several children have themselves been injured or killed.

669. In addition, children of parents addicted to opioids, described as the “invisible victims of the epidemic,” are “flooding into the state’s child protection system.” The opioid epidemic is largely responsible for the 9% increase in the numbers of children—nearly 1,100 children—placed in the care of Ohio child protection agencies between 2011 and 2015. Seventy percent of infants placed in Ohio’s foster care system are children of parents with opioid addictions. These figures do not account for children who are placed in kinship care or who

receive public services without being displaced from their homes. Increasingly, relatives have been caring for children affected by the opioid epidemic.

670. In Ohio, there has been a 62% increase in the number of children placed in a relative's care between 2011 and 2016. As of May 2017, approximately 124,000 children - 5% of the children in the state, were being raised by relatives other than their parents. Even so, public agencies have struggled to find homes for children in need, and "[t]he system's historic reliance on kinship families has been checked because, too often, multiple members of the same family are addicted."

671. Meanwhile, caseworkers burn out as a result of the frustration at the difficulty of reuniting families due to the relapses associated with opioids, and in some cases, as a result of significant secondary trauma. To successfully reunify children of parents with opioid addiction requires much more intensive casework, and according to some local agencies, more children are being placed in permanent custody than returning to their parents.

672. According to a report by the Public Children Services Association of Ohio ("PCSAO"), a statewide membership organization for county children services agencies, if children continue to enter foster care at the current rate, by 2020, more than 20,000 Ohio children will be in foster care. Already, Ohio's children's services have been described as reaching a state of crisis. Increasing placement costs have sent agencies into significant deficits, at the same time they are also facing recruitment, training and overtime costs due to loss of staff.

673. Children removed from homes with drug abuse tend to stay in foster care longer and to enter foster care having experienced more significant trauma, which makes their care more expensive. Many of these kids watched their parents overdose or die, according to the PCSAO's executive director. Children may have gone days without food or supervision, and

older children may have functioned as surrogate parents to their younger siblings, reported Ohio's Attorney General.

674. Increasingly, children entering the foster care system from homes with drug abuse are dealing with significant mental health issues, requiring intensive treatment that may cost as much as \$200 to \$400 a day, because of what they have seen or experienced. Ohio has the heaviest reliance on local dollars for child protection services of any state in the nation, with counties shouldering more than half of the costs through local government funds and dedicated levies.

675. Even infants have not been immune to the impact of opioid abuse. There has been a dramatic rise in the number of infants who are born addicted to opioids due to prenatal exposure and suffer from neonatal abstinence syndrome ("NAS," also known as neonatal opioid withdrawal syndrome, or "NOWS"). These infants painfully withdraw from the drug once they are born, cry nonstop from the pain and stress of withdrawal, experience convulsions or tremors, have difficulty sleeping and feeding, and suffer from diarrhea, vomiting, and low weight gain, among other serious symptoms. The long-term developmental effects are still unknown, though research in other states has indicated that these children are likely to suffer from continued, serious neurologic and cognitive impacts, including hyperactivity, attention deficit disorder, lack of impulse control, and a higher risk of future addiction. When untreated, NAS can be life-threatening. In 2009, more than 13,000 infants in the United States were born with NAS, or about one every hour.

676. In Ohio, the number of infants born with NAS increased six-fold from 2004 to 2011. From 2009 to 2014, data from seven regional hospitals showed a greater-than six-fold increase in drug-exposed infants. As a whole, the State has seen an 816% increase in the number

of infants born with NAS from 2006 to 2015, with opioids and other illegal narcotics being the most commonly implicated drugs since 2009. In 2015 alone, 2,174 infants were admitted to inpatient settings for this painful condition, an average of six per day. NAS has become so prevalent in Ohio communities that the state's Department of Health now recommends screening all newborns for this condition.

677. This dramatic rise in NAS may be described as an epidemic within an epidemic. According to the Ohio Perinatal Quality Collaborative, the "NAS epidemic is steadily increasing, overwhelming social service systems and public payers." In 2013, the average inpatient stay and bill for babies suffering from NAS was four times longer and four times higher than for other infants in Ohio. Newborns with NAS spent approximately 26,000 days in Ohio hospitals in 2014, with health care costs totaling \$105 million. Ohio's healthcare system alone has contributed more than \$133 million to NAS-related hospital charges in 2015. Often, however, after the mothers and babies are discharged from the hospital, they are on their own, without even the resources to transition them to addiction treatment programs.

678. Rising opioid use and abuse have negative social and economic consequences far beyond overdoses in other respects as well. According to a recent analysis by a Princeton University economist, approximately one out of every three working age men who are not in the labor force take daily prescription pain medication. The same research finds that opioid prescribing alone accounts for 20% of the overall decline in the labor force participation for this group from 2014-16, and 25% of the decline in labor force participation among women. Many of those taking painkillers still said they experienced pain daily. A recent report by The Ohio State University estimated that in Ohio, in 2015 alone, "opioid overdoses resulted in \$3.8 billion

in lost lifetime productivity” and “[i]n total, the cost of opioid abuse and dependency ranged from \$6.6 billion to \$8.8 billion.”

679. As a result of the impacts described above, and others, Ohio’s local governments have incurred substantial expense to address the opioid epidemic created by Defendants’ misconduct. Local governments have funded, for example, medication-assisted treatment, residential treatment, recovery housing, detoxification programs, and prevention efforts, and have provided increased fire, and emergency services to cope with the opioid epidemic. They also carry out State programs, such as DAWN (Deaths Avoided with Naloxone) clinics, which provide education and naloxone to opioid users and family members. Even school resource officers are called upon to address opioids, largely stemming from students who obtain opioids through prescriptions filled by family members.

680. The costs also include expenses associated with increased drug crimes, including costs for prosecutors, jails, adult probation, addiction treatment and alternative adult corrections providers, indigent defense, common pleas and/or drug court operations, juvenile court operations, and juvenile probation and detention. Local governments have also faced increased costs from non-drug offenses, such as burglary, elder abuse, or domestic violence, that also are related to opioid use. One town reported, for example, that roughly 80% to 85% of police calls and investigations are related to drugs, and the majority of those involve opioids. In addition to confronting rising numbers of inmates, local jails have also shouldered additional costs and burdens from opioid-addicted inmates, including providing services related to opioid detoxification, preventing suicides believed to be related to opioid withdrawal, and providing Narcan to inmates upon discharge to help prevent future overdoses.

681. The Governor's Cabinet's Opiate Action Team has described Ohio's model for fighting drugs as perhaps the most comprehensive in the nation, while at the same time recognizing the key role of local leaders in combatting the crisis. The team met with local leaders in a number of the counties hardest hit by the opioid crisis to identify best practices and additional resources, among other goals. Ohio communities continue to evolve new strategies for fighting this epidemic. The needs, however, far outpace the available funding.

H. Facts Specific to Cuyahoga County

682. Plaintiff Cuyahoga County, the second largest county in Ohio with nearly 1.3 million residents, has been deeply affected by the opioid crisis. Cuyahoga County contains 38 cities, including Cleveland, the county seat and the largest city in the County with nearly 400,000 residents.

683. The opioid crisis has reshaped daily reality for Cuyahoga County in numerous ways, including but not limited to increased and intensified emergency medical responses to overdoses; increased drug-related offenses affecting law enforcement, jails, and courts; enormous resources spent on community and social programs to treat those with opioid use disorders; higher workers' compensation costs for prescription opioids and opioid-related claims; and ultimately prevalent opioid abuse throughout the County, including in public places.

684. The County has been working to address the unfolding crisis, and in 2010 it formed an Opiate Task Force to find solutions to the increasing number of accidental drug-related deaths caused by opioids. The Task Force is comprised of nearly 200 individuals across 65 organizations, and members include public health officials, prevention specialists, mental health experts, and individuals in recovery, law enforcement, medicine, and mental health services. In the approximately seven years since it was formed, the Task Force has been able to

2016. The majority these overdoses involved opioids, including both prescription and non-prescription such as heroin.

688. The number of opioid-related fatalities in the County now exceeds the total number of deaths from homicides, suicides, and car accidents combined. To quote the Cuyahoga County Medical Examiner, Dr. Thomas Gilson, Cuyahoga County is currently suffering a “slow-moving mass fatality event that occurred last year, is occurring again this year and will occur again next year.”²⁸²

689. Higher overdose rates flowed directly from a sharp rise in opioid prescription rates in Cuyahoga County. For instance, in 2012, the prescribing rate for opioids in Cuyahoga County was 76.2%. In other words, 76 opioid prescriptions were written for every 100 County residents. And despite efforts by local and state officials to curb the crisis and limit the number of pills in the County, the prescribing rate remained above 61% in 2016.

690. In addition, the opioid crisis has evolved, and now heroin, fentanyl, and carfentanil use is the latest evolution in the opioid crisis in the County. As noted above, fentanyl and carfentanil are incredibly lethal. Adding to the danger, in some instances fentanyl has been made to look exactly like oxycodone tablets. For example, in February 2016, federal agents in suburban Cleveland seized 900 fentanyl pills that were marked like the 30mg oxycodone tablets manufactured by Defendant Mallinckrodt, with the signature “M” imprint and light blue color.²⁸³

²⁸³ *Mislabeled painkillers “a fatal overdose waiting to happen,”* CBS News (Feb. 29, 2016, 10:46am), <https://www.cbsnews.com/news/mislabeled-painkillers-a-fatal-overdose-waiting-to-happen/>.

the County; in 2013, the State's 88 counties doled out \$275 million in placement costs to place children in foster care. This cost increased to \$330 million in 2016.

692. Additionally, in the past several years there has been a significant increase in babies born addicted to opioids. These infants spend their first months of life suffering from withdrawal, a condition known as "Neonatal Abstinence Syndrome" (NAS). These children often need years of long-term care and monitoring due to NAS. In 2010, 258 children in Cuyahoga County were born exposed to drugs, according to the County's Children's Services Division. By 2017, that number had doubled, jumping to 535. "It would be nice to say that we're near a plateau, but I don't think so," said Scott Britton, the deputy director of the Public Children's Services Association of Ohio. "We just keep seeing the numbers going up and up."²⁸⁵

693. These statistics and stories describe a public health crisis of epidemic proportions in Cuyahoga County. As a practical and financial matter, the County has been saddled with an enormous economic burden. Nearly every department in the County is affected by the opioid crisis caused by Defendants in some manner, and several departments have direct and specific response costs that total tens of millions of dollars.

694. In fact, a recent study published in October 2017 performed by the C. William Swank Program in Rural-Urban Policy at Ohio State University titled "Taking Measure of Ohio's Opioid Crisis" estimated that there were likely 92,000 to 170,000 Ohioans abusing or dependent upon opioids in 2015. Based on these opioid abuse disorder rates, the study concluded that the annual costs associated with treatment, criminal justice, and lost productivity totaled \$2.8 billion to \$5.0 billion in 2015 alone. Additionally, the study estimated that the

²⁸⁵ John Caniglia, *Cost of opioid epidemic soars, hitting taxpayers harder than ever*, Cleveland.com (Oct. 8, 2017), http://www.cleveland.com/metro/index.ssf/2017/10/the_cost_of_the_opioid_epidemi.html.

lifetime lost productivity of those who died from an opioid overdose in 2015 was \$3.8 billion, for an annual total cost of opioid addiction, abuse, and overdose deaths ranging from \$6.6 billion to \$8.8 billion.

695. When applying these estimates to Cuyahoga County—a county that represents approximately 11% of Ohio’s population—an estimated 10,120 to 18,700 Cuyahoga residents were abusing or dependent upon opioids in 2015. This resulted in annual costs associated with treatment, criminal justice, and lost productivity of \$308 million to \$550 million in Cuyahoga County in 2015 alone.

696. Whatever the precise cost, there is no doubt that as a direct result of Defendants’ aggressive marketing scheme and excessive distribution of prescription opioids, the County has suffered significant and ongoing harms—harms that will continue well into the future. Each day that Defendants continue to evade responsibility for the epidemic they caused, the County must continue allocating substantial resources to address it.

2. Defendants Actively Promoted Opioids in Cuyahoga County and Were Aware of the Excessive Prescribing Practices That Followed

697. Sales representatives targeted their opioid promotion at health care providers in Cuyahoga County. They communicated the misrepresentations discussed in this Complaint to doctors, nurses, and staff in the County. Upon information and belief, these detailers consistently and aggressively offered free meals—including at some of the most expensive restaurants in Cuyahoga County—and other perks to doctors and employees at the offices they visited, and the detailers were given handsome bonuses when these doctors wrote prescriptions for their product. Sales representatives, including those active in Cuyahoga County, knew or should have known the potential consequences of pushing potent doses of opioids for chronic pain and other common indications.

698. Although Plaintiff does not presently know the names of the Marketing Defendants' sales representatives active in Cuyahoga County, through discovery this information will become available. Sales representatives' call notes, for example, will identify the strategies Marketing Defendants deployed specifically within Cuyahoga County and some of the specific misrepresentations they made.

699. Pill mills were a significant problem in Cuyahoga County, dispensing millions of pills into the community. Several of the pill mills churned out such a high volume of pills that they were criminally prosecuted. One doctor in Westlake, for example, wrote more than 33,000 prescriptions for controlled substances from 2009 through 2011, including more than 12,900 prescriptions in 2009 alone. As discussed above, the Marketing Defendants utilize prescription data from IMS Health and other entities to track where their drugs are being prescribed, in what quantities, and by whom, in order to tailor their detailing activities. Sales representatives, whose compensation is tied to the volume of prescriptions written in their territories, know which doctors are the top prescribers of both their branded drugs and competitor products. Likewise, all Defendants in the supply chain are responsible for monitoring the movement of controlled substances.

700. Defendants, thus, were fully aware of doctors and clinics whose prescribing activities were questionable. Yet, upon information and belief, Defendants did nothing to stop the pills mills from operating, and to the contrary encouraged their activities by sending sales representatives to the pill mills and continuing to supply excessive quantities of opioids.

3. Defendants Distributed Hundreds of Millions of Pills in Cuyahoga County

701. According to preliminary data recovered from the United States Government's ARCOS database regarding some of the most frequently abused categories of opioids,²⁸⁶ distributors registered with the DEA, including Defendants, moved approximately 396 million²⁸⁷ units of these opioids into Cuyahoga County between 2006 and 2014. To put these numbers in perspective, these totals equate to more than 35 pills for every man, woman and child in the county each year.

702. [REDACTED]

[REDACTED]

704. [REDACTED]

[REDACTED]

[REDACTED]

²⁸⁶ On information and belief, the ARCOS data disclosed to date in this litigation only contains data for four opioid-related DEA drug codes: oxycodone (DEA Drug Code 9143); hydrocodone (DEA Drug Code 9193); hydromorphone (DEA Drug Code 9150); and fentanyl (DEA Drug Code 9801). The ARCOS data disclosed to date does not include morphine (DEA Drug Code 9300); oxymorphone (DEA Drug Code 9652); carfentanil (DEA Drug Code 9743); tapentadol (DEA Drug Code 9780); or Buprenorphine (DEA Drug Code 9064).

²⁸⁷ The total is [REDACTED]

²⁸⁸ The total is [REDACTED]

enormous cost and place a huge strain on the County's approximately \$1.45 billion annual budget. Below are illustrative but non-exhaustive examples of the harms the County has suffered and will continue to suffer as a result of Defendants' misconduct.

a. Healthcare-Related Services

716. The Alcohol, Drug Addiction and Mental Health Services (ADAMHS) Board of Cuyahoga County is responsible for the planning, funding and monitoring of public mental health and alcohol and other drug addiction services delivered to the residents of Cuyahoga County. ADAMHS spends enormous sums for treatment programs, a large percentage of which is devoted to treating individuals with opioid-use disorder or dependence. For example, ADAMHS tracks the number of individuals they serve with an opioid-use disorder or dependence, and in 2016, fifty percent (1,440 out of 2,803 individuals they served) had such a condition. Preliminary numbers for 2017 indicate that this percentage is rising.

717. Cuyahoga County also has two health and human services levies in place, with millions of dollars going for treatment through ADAMHS. One levy is a 4.8-mill tax voters approved in 2016, and the other is a 3.9-mill tax that voters approved in 2013. Together, these levies provide \$39.4 million in funds to ADAMHS, representing nearly 60% of the entire budget for this department.

718. A majority of the funding in the last three years has been devoted to combatting the opioid epidemic created by Defendants. For example, from its nearly \$40 million budget, ADAMHS devotes a substantial percentage to addiction treatment and recovery services, including residential treatment, intensive outpatient, prevention, detoxification, housing, employment and education. Last year, ADAMHS allocated \$20.1 million to such expenses, and \$17 million of this amount was specifically designated on opioid treatment and recovery services.

719. But even with this substantial commitment, the County is well short of what it needs to treat the growing number of individuals with opioid-use disorder in Cuyahoga County. Last year, Bill Denihan, the former director of ADAMHS, pushed for a levy that would have raised more than \$50 million a year for the various opioid recovery and treatments needed. Substantial funds are needed because based on conservative estimates, there are 80,000 individuals in the County suffering from an opioid addiction—6.4% of the County’s entire population.

720. The cost of providing treatment beds in Cuyahoga County alone jumped from \$4.9 million in 2014 to \$9.9 million in 2017, an increase of 102% in just three years. And while the county has 444 beds in a variety of treatment programs, more are needed to avoid individuals in recovery leaving prematurely and returning to their homes only to relapse.

721. Additionally, access to medication-assisted treatment (MAT) remains inadequate in the County. National health experts universally agree that MAT, including buprenorphine—the first drug approved to treat opioid abuse that can be prescribed or dispensed in physician offices—is vital to recovery. But in 2016, only 273 physicians in Ohio were certified to treat 30 patients at a time, and only 104 physicians were certified to treat 100 patients at a time.

722. Based on the limited numbers of buprenorphine-licensed physicians, only 18,000 opioid-dependent patients could have received buprenorphine treatment from a private physician in 2016—not nearly enough, given the Swank study’s estimate that 92,000 and 170,000 Ohioans are abusing or dependent upon opioids. Buprenorphine treatment is similarly scarce in Cuyahoga County, which in 2016 had a rate of only one certified prescriber for approximately every 224 individuals dependent on or abusing opioids. Additional funds are needed to expand access to MAT.

723. Cuyahoga County's Emergency Management Services (EMS) has also been hit hard by the crisis. EMS provides essential emergency medical and life-saving services to the County and in an area spanning 457 square miles. Any time residents of Cuyahoga County call 9-1-1 for an emergency, they use the EMS system which partners with fire departments, paramedic agencies, EMS dispatch centers, and hospitals.

724. EMS is at the front line of the opioid crisis, as they are the first on-scene responders to overdoses, deaths, and injuries related to opioid abuse. EMS incurs costs in dealing with the opioid crisis both in terms of responding to these emergencies and in training and preparing for them.

725. For example, the resources required for each instance of a paramedic or emergency medical technician (EMT) administering naloxone in response to a 9-1-1 call for an overdose include not only the cost of naloxone itself but also the costs of training EMTs to administer the life-saving drug. Cuyahoga County EMS has had to administer thousands of doses of naloxone over the last three years: 1,903 doses of naloxone in 2015, 5,100 doses in 2016, and 6,643 doses in 2017.

726. Like many communities in the country, Cuyahoga uses a tiered system to respond to medical emergencies. The first-tier response includes Basic Life Support (BLS) services provided by firefighter/EMTs or community medical technicians, whereas Advanced Life Support (ALS) resources (paramedics) usually provide emergency care for critical or life-threatening injuries and illness. ALS resources respond to medical emergencies that are immediately life-threatening, such as cardiac arrest, stroke, overdose, and car accidents. In contrast, BLS calls are for non-acute and non-life-threatening medical issues. EMS must spend County resources in responding to both ALS and BLS calls related to prescription opioid abuse.

Overdoses are not the only opioid-related health emergencies to which EMS must respond. For example, opioids have helped to drive a wave of new health problems that EMS must deal with. Many of these health problems, including infections and infectious diseases, fall outside the typical emergencies for which EMS was designed to respond or address. As a result, the opioid epidemic has had more subtle effects on EMS and its budget, in addition to the costs of emergency responses to overdoses.

727. EMS also spends resources on staffing, education, and outreach in direct response to the crises created by Defendants, including regional and medical program staffing costs.

728. The County's Medical Examiner's Office (CCMEO) has also been hit hard by the crisis caused by Defendants. CCMEO operates as a regional crime lab with national accreditations. They provide timely death data regarding drug overdoses in the County that help steer prevention efforts. The CCMEO also created investigation courses for justice and law enforcement officials. All of these efforts come at a substantial cost to the County.

729. Indeed, in 2017, the CCMEO requested a \$200,000 budget increase due to the opioid overdose epidemic. This increase was needed because the CCMEO saw an increase in operational costs due to opioid related deaths of approximately \$1.54 million dollars. These additional funds are necessary because, among other things, the County has needed to hire additional pathologists due to the growing number of fatalities as others begin to exceed caseload limits set by the National Association of Medical Examiners. The County also needs the additional funds for equipment, supplies, testing, and transport.

730. In 2018, the CCMEO will need at least another \$1 million to continue to operate and perform its responsibilities, due once again to the rising number of opioid related deaths,

including most prominently heroin and fentanyl. The increased funds required are a direct consequence of the crisis created by Defendants.

731. In addition to ADAMHS, EMS, and the CCMEO, the County spends substantial sums focusing on prevention, treatment, and recovery through a variety of programs for those suffering from an opioid use disorder. For instance, the Cleveland Department of Public Health has facilitated a Project DAWN walk-in clinic since July 2015. Project DAWN is an opioid overdose education and naloxone distribution program. Program participants are educated on the risk factors of opioid overdose, how to recognize an opioid overdose, and how to respond to an opioid overdose by calling 9-1-1, giving rescue breaths, and administering nasal naloxone. Eligible participants are given free naloxone kits containing two vials of naloxone hydrochloride medication. To date, 188 naloxone kits have also been distributed at the clinic.

732. The County has also created a protocol to being distributing naloxone in the County. All pharmacists received addiction education and were trained on how to provide naloxone. Guidelines were also created to educate customers filling opioid prescriptions.

733. In addition, the County spends substantial resources regarding prevention awareness through a variety of programs, including Big Elephant, the Community Awareness and Prevention Association, a Heroin/Fentanyl Prevention Awareness Campaign, Drug Awareness & Prevention, HUGS Foundation, Robby's Voice, and Social Advocates for Youth.

734. Through Circle Health Services, the County also operates the first, and currently one of only a few, licensed Syringe Exchange Programs in Ohio. The program exchanged more than 495,000 needles in 2016 through its clinic location and two mobile sites in the city of Cleveland.

735. The County also partners and/or funds several organizations providing treatment and recovery services, including the Orca House and the Woodrow Project. These services offer residential treatment and outpatient treatment for individuals with opioid-use disorder.

736. Outpatient treatment programs for individuals with an opioid-use disorder are particularly expensive for the County. For instance, 82 patients completed Intensive Outpatient treatment and housing at a cost of \$10,190 per patient (a cost of more than \$835,000), and 105 patients participated in addiction counseling at rate of \$87.28 an hour.

737. In sum, the County allocates substantial portions of its budget to prevent, treat, and assist in recovery from opioid addiction, and also spends substantial sums to prevent fatal opioid overdoses. But for Defendants' misconduct, Cuyahoga County would not have spent the massive amounts it has spent and will continue to spend in the future.

b. Cuyahoga County's Criminal Justice System

738. The County's criminal justice system has been particularly affected by the opioid crisis. The Sheriff's Department has dealt with an increasing number of opioid-related crimes, jails must spend additional amounts housing inmates involved in opioid-related crimes and providing MAT to inmates, and County's court system is saddled with a rising case load related to opioid abuse, including cases in its drug court.

739. The Cuyahoga County Sheriff's Department (CCSD) ensures the safety of the entire County through its approximately 1,100 employees. Ohio law mandates that the CCSD provides for law enforcement, court security, service of papers, jail operations, extradition process, and the transportation of prisoners. The CCSD also maintains full police jurisdiction in all of the municipalities, villages, and townships within Cuyahoga County.

Drug Control Policy to determine the area “is a significant center of illegal drug production, manufacturing, importation, or distribution” and “drug-related activities in the area are having a significant harmful impact in the area and in other areas of the country,” among other criteria.

744. Pills and heroin arrive in the County through large, difficult-to-untangle networks that stretch across state lines. Combatting this rise in drug trafficking has forced the County to put more officers on the street and assign more detectives to investigate these drug cases. In addition, because many of the sources of illicit opioids in Cuyahoga County come from large criminal networks, CCSD has spent considerable time and effort coordinating law enforcement efforts with other jurisdictions, including with the City of Cleveland.

745. CCSD officers and deputies also are equipped with naloxone, and the County has incurred significant costs to ensure this life-saving drug is available to its deputies.

746. CCSD has also coordinated the effort to provide the 42 municipalities in the County with Drug Drop Boxes—sites where individuals can safely dispose of unused and excess prescription opioids. In 2016 alone, CCSD destroyed over 10,000 pounds of unwanted or expired medication.

747. With respect to its jails, the County must spend substantial sums simply housing inmates identified as opioid users at the Cuyahoga County Corrections Center. For instance, in 2017, the cost to the County for housing the approximately 7,800 inmates identified as opioid users in the County’s jail system last year totaled more than \$19 million. The County’s jail system also saw a 7% increase in drug charge bookings in 2017 from the prior year.

748. The services the County provides to these inmates include Intensive Outpatient Treatment (IOP), Individual Counseling, and Medication-Assisted Treatment (MAT). In 2016 and 2017, the cost of providing these services to just 306 inmates cost more than \$350,000.

catalogued in divorces, dependency cases, and other matters that arise when a parent or child becomes addicted to opioids.

754. The cases that come before the Court not only demonstrate some of the effects of the crisis on County residents, but have direct and significant costs to the County. It takes significant resources to try criminal cases. And though critical to the efforts to produce favorable outcomes for opioid users and their families, the many programs the Court has developed require significant resources.

755. Relatedly, the County must fund both its Prosecutor's Office and its Public Defender Office to both prosecute and protect the rights of low-income people in criminal, juvenile delinquency, and parental rights matters. Many of the cases both offices now handle involves opioid-related crimes, placing a significant burden on both offices' respective budgets.

756. The Court is also funding an Addiction Treatment Program (ATP) to help individuals with opioid-use disorder receive MAT in connection with the County's Drug Court. The Drug Court docket was established in 1998 to reduce substance abuse and recidivism by utilizing treatment and community control alternatives. In particular, the docket was established to target low risk/high need offenders. Through ATP, the County provides funds to individuals in Drug Court to assist in access with MAT, such as buprenorphine, methadone, and vivitrol – proven methods of treating individuals with opioid use disorder. This medication, however, is not cheap. For example, the County spent nearly \$100,000 in vivitrol shots alone in 2017.

757. In addition, the Court of Common Pleas provides an additional full docket specifically targeting 45 opioid-abusing clients in each year from 2016-2018. These individuals also receive substance abuse behavioral treatment as well as MAT.

758. In 2016, the Cuyahoga County Common Pleas Court also placed 842 offenders into residential drug/alcohol treatment programs through the Probation Department Centralized Case Management program.

759. The increase in both criminal and civil cases related to opioid use and abuse has ultimately put a substantial strain on the Court's resources. It has had to shift resources away from some areas in order to meet the challenges of opioid-related litigation. As the above statistics and figures demonstrate, the crisis caused by Defendants has had profound impacts on the County's criminal justice system.

c. Direct Costs for Prescription Opioids and Workers' Compensation Claims

760. The County has also been damaged directly through its payments of false claims for chronic opioid therapy by (a) partially funding a medical insurance plan for its employees and their dependents, and (b) its workers' compensation program.

761. With respect to the former, the County pays for medical claims related to opioids. In other words, any time an individual covered by the County's health insurance program submits a claim for treatment and the primary diagnosis is opioid-related—including for instance, treatment for opioid addiction—the County incurs costs in providing coverage

762. Across the United States, people who are prescribed opioid painkillers cost health insurers approximately \$16,000 more than those who do not have such prescriptions. Those costs, including those borne by the County, would have been avoided had Defendants not hidden the truth about the risks and benefits of opioids.

763. The County has also shouldered significant health-related costs outside of its health insurance program as a result of Defendants' actions. For instance, when County employees are prescribed opioids for chronic pain they often are forced to miss work, because

the drugs' effects interfere with the ability to work. Since opioid prescriptions fail to treat the cause of the pain, the employees often continue to miss work due to the ongoing problems.

764. In fact, recent studies suggest that opioids actually slow recovery times, keeping employees out of work longer than they would have been had they not taken these unnecessary pharmaceuticals. If those employees become addicted to the opioids, they are likely to miss even more work. Because of Defendants' misstatements, the County's employees have had losses in work time, which result in substantial losses to the County.

765. The County also administers its own workers' compensation program. When someone working for the County is injured on the job, the County pays, among other things, that person's health care costs.

766. The vast majority of the opioid prescriptions related to these workers' compensation claims are unnecessary, as the injuries are typically back strains, joint pain, and other injuries that should be treated with physical therapy, lidocaine patches, and other non-opioid therapies. Yet because of Defendants' marketing efforts, the County purchased prescription opioids in connection with its workers' compensation programs it should have never paid for.

767. And as set forth above, the direct costs of filling the opioid prescriptions is just a small part of the total cost to the County for prescriptions of opioids. Under its workers' compensation plan, the County pays for doctors' visits, lab work, and other costs related to the prescription of opioid painkillers. Had Defendants told the truth about the risks and benefits of opioids, Cuyahoga County would not have had to pay for these drugs or the costs related to their prescriptions.

768. Defendants' deceptive marketing of opioids ultimately caused health care providers to prescribe and the County to pay for—through partially funding a medical insurance plan for its employees and its workers' compensation program—opioids to treat chronic pain. The fact that the County would pay for these inappropriate prescriptions was both the foreseeable and intended consequence of Defendants' fraudulent marketing scheme. Defendants set out to change the medical and general consensus supporting chronic opioid therapy with the intention of encouraging doctors to prescribe, and government payors such as Cuyahoga to pay for, long-term prescriptions of opioids to treat chronic pain despite the absence of genuine evidence supporting chronic opioid therapy and the existence of evidence to the contrary.

769. Defendants' misrepresentations related to the County's requirement that medical treatments be medically necessary or reasonably required—a condition of payment for any medical treatment under the County's health plans and workers' compensation program. But for Defendants' fraudulent and deceptive marketing, prescribers would have accurately understood the risks and benefits of opioids and would not have prescribed opioids where not medically necessary or reasonably required to treat chronic pain. Misrepresentations as to, for example, whether patients were likely to become addicted to the drug, would be able to resume life activities, and would experience long-term relief were not minor or insubstantial matters, but the core of prescribers' decision-making.

770. It is the County's practice not to pay claims that are not medically necessary or reasonably required. However, the County would not have known whether a prescriber had made an informed judgment that a particular claim for opioids was medically necessary or reasonably required, or, conversely had acted under the influence of Defendants' fraudulent and deceptive marketing. It is not clear from the face of a claim whether: (1) the patient suffered from cancer or

another terminal condition, for example, where long-term prescribing was medically necessary or appropriate; or (2) the prescriber was exposed to Defendants' marketing materials, treatment guidelines, or education programs, or visited by a drug representative who engaged in affirmative misrepresentations or omissions, for example.

5. The Cuyahoga County Opiate Task Force

771. In addition to the direct costs incurred in responding to the opioid crisis, the County has been investing resources into efforts that, it hopes, will bring an end to the opioid epidemic and at least mitigate the damage caused by Defendants. As noted above, Cuyahoga County formed an Opiate Task Force in 2010 to find solutions to the increasing number of unintentional opioid-related overdose deaths.

772. The Opiate Task Force is comprised of nearly 200 individuals across 65 organizations. Members come from a wide array of backgrounds, including individuals in drug treatment and recovery, education, health care, law enforcement, medicine, mental health services, pharmacists, prevention specialists, and public health officials. The Task Force also includes concerned citizens of the County.

773. The stated mission of the Task Force is to serve the residents of the County by activity working to raise public awareness, promote community action, and provide education related to the dangers and devastating effects of drug abuse. The stated vision of the Task Force is to create a healthier community by reducing accidental fatalities associated with opiate abuse through collaborative partnerships that focus on prevention, treatment, and recovery.

774. In addition, because the individuals using opioids are increasingly younger, the effects of the opioid epidemic will reverberate throughout the County for decades to come. As such, the Task Force supports and maintains several programs specifically aimed at raising awareness in youth.

775. Members of the Task Force also participate in the U.S. Attorney's Heroin and Opioid Task Force – a separate but related committee established in 2013 to address the region's opioid epidemic. Together, the County's Task Force and the U.S. Attorney's Task Force have contributed to inter alia, increasing access to naloxone; making countless presentations to parents, students, and other member off the community at town hall meetings and schools; increased training for doctors and other medical professionals about the dangers of opioids; the creation of a heroin-involved death investigation team that treats overdoses as crime scenes; and working to increase the availability of drug treatment.

I. No Federal Agency Action, Including by The FDA, Can Provide The Relief Cuyahoga County Seeks Here

776. The injuries Cuyahoga County has suffered and will continue to suffer cannot be addressed by agency or regulatory action. There are no rules the FDA could make or actions the agency could take that would provide Cuyahoga County the relief it seeks in this litigation.

777. Even if prescription opioids were entirely banned today or only used for the intended purpose, thousands of Cuyahoga County residents, and millions of Americans, would remain addicted to opioids, and overdoses will continue to claim lives. The County will respond to related medical emergencies and administer naloxone. The Sheriff's Office will spend extraordinary resources combatting illegal opioid sales, and the Prosecuting Attorney's Office, the Public Defenders' Office, and Cuyahoga County courts will remain burdened with opioid-related crimes. Social services and public health efforts will be stretched thin.

778. Regulatory action would do nothing to compensate the County for the money and resources it has already expended addressing the impacts of the opioid epidemic and the resources it will need in the future. Only this litigation has the ability to provide the County with the relief it seeks.

779. Furthermore, the costs Cuyahoga County has incurred in responding to the homeless crises and in rendering public services described above are recoverable pursuant to the causes of actions raised by the County. Defendants' misconduct alleged herein is not a series of isolated incidents, but instead the result of a sophisticated and complex marketing scheme over the course of more than twenty years that has caused a substantial and long-term burden on the municipal services provided by the County. In addition, the public nuisance created by Defendants and the County's requested relief in seeking abatement further compels Defendants to reimburse and compensate Cuyahoga County for substantial costs they have spent addressing the crisis caused by Defendants.

J. The Defendants Conspired To Engage In The Wrongful Conduct Complained Of Herein and Intended To Benefit Both Independently and Jointly From Their Conspiracy

1. Conspiracy Among Marketing Defendants

780. The Marketing Defendants agreed among themselves to set up, develop, and fund an unbranded promotion and marketing network to promote the use of opioids for the management of pain in order to mislead physicians, patients, health care providers, and health care payors through misrepresentations and omissions regarding the appropriate uses, risks, and safety of opioids, to increase sales, revenue, and profit from their opioid products.

781. This interconnected and interrelated network relied on the Marketing Defendants' collective use of unbranded marketing materials, such as KOLs, scientific literature, CMEs, patient education materials, and Front Groups developed and funded collectively by the Marketing Defendants intended to mislead consumers and medical providers of the appropriate uses, risks, and safety of opioids.

782. The Marketing Defendants' collective marketing scheme to increase opioid prescriptions, sales, revenues and profits centered around the development, the dissemination,

and reinforcement of nine false propositions: (1) that addiction is rare among patients taking opioids for pain; (2) that addiction risk can be effectively managed; (3) that symptoms of addiction exhibited by opioid patients are actually symptoms of an invented condition dubbed “pseudoaddiction”; (4) that withdrawal is easily managed; (5) that increased dosing presents no significant risks; (6) that long-term use of opioids improves function; (7) that the risks of alternative forms of pain treatment are greater than the adverse effects of opioids; (8) that use of time-released dosing prevents addiction; and (9) that abuse-deterrent formulations provide a solution to opioid abuse.

783. The Marketing Defendants knew that none of these propositions is true and that there was no evidence to support them.

784. Each Marketing Defendant worked individually and collectively to develop and actively promulgate these nine false propositions in order to mislead physicians, patients, health care providers, and healthcare payors regarding the appropriate uses, risks, and safety of opioids.

785. What is particularly remarkable about the Marketing Defendants’ effort is the seamless method in which the Marketing Defendants joined forces to achieve their collective goal: to persuade consumers and medical providers of the safety of opioids, and to hide their actual risks and dangers. In doing so, the Marketing Defendants effectively built a new – and extremely lucrative – opioid marketplace for their select group of industry players.

786. The Marketing Defendants’ unbranded promotion and marketing network was a wildly successful marketing tool that achieved marketing goals that would have been impossible to have been met by a single or even a handful of the network’s distinct corporate members.

787. For example, the network members pooled their vast marketing funds and dedicated them to expansive and normally cost-prohibitive marketing ventures, such as the

creation of Front Groups. These collaborative networking tactics allowed each Marketing Defendant to diversify its marketing efforts, all the while sharing any risk and exposure, financial and/or legal, with other Marketing Defendants.

788. The most unnerving tactic utilized by the Marketing Defendants' network, was their unabashed mimicry of the scientific method of citing "references" in their materials. In the scientific community, cited materials and references are rigorously vetted by objective unbiased and disinterested experts in the field, scientific method, and an unfounded theory or proposition would, or should, never gain traction.

789. Marketing Defendants put their own twist on the scientific method: they worked together to manufacture wide support for their unfounded theories and propositions involving opioids. Due to their sheer numbers and resources, the Marketing Defendants were able to create a false consensus through their materials and references.

790. An illustrative example of the Marketing Defendants' utilization of this tactic is the wide promulgation of the Porter & Jick Letter, which declared the incidence of addiction "rare" for patients treated with opioids. The authors had analyzed a database of hospitalized patients who were given opioids in a controlled setting to ease suffering from acute pain. These patients were **not** given long-term opioid prescriptions or provided opioids to administer to themselves at home, nor was it known how frequently or infrequently and in what doses the patients were given their narcotics. Rather, it appears the patients were treated with opioids for short periods of time under in-hospital doctor supervision.

791. Nonetheless, Marketing Defendants widely and repeatedly cited this letter as proof of the low addiction risk in connection with taking opioids in connection with taking

opioids despite its obvious shortcomings. Marketing Defendants' egregious misrepresentations based on this letter included claims that less than one percent of opioid users became addicted.

792. Marketing Defendants' collective misuse of the Porter & Jick Letter helped the opioid manufacturers convince patients and healthcare providers that opioids were not a concern. The enormous impact of Marketing Defendants' misleading amplification of this letter was well documented in another letter published in the NEJM on June, 1, 2017, describing the way the one-paragraph 1980 letter had been irresponsibly cited and in some cases "grossly misrepresented." In particular, the authors of this letter explained:

[W]e found that a five-sentence letter published in the Journal in 1980 was heavily and uncritically cited as evidence that addiction was rare with long-term opioid therapy. We believe that this citation pattern contributed to the North American opioid crises by helping to shape a narrative that allayed prescribers' concerns about the risk of addiction associated with long-term opioid therapy...

By knowingly misrepresenting the appropriate uses, risks, and safety of opioids, the Marketing Defendants committed overt acts in furtherance of their conspiracy.

2. Conspiracy Among All Defendants

793. In addition, and on an even broader level, all Defendants took advantage of the industry structure, including end-running its internal checks and balances, to their collective advantage. Defendants agreed among themselves to increasing the supply of opioids and fraudulently increasing the quotas that governed the manufacture and supply of prescription opioids. Defendants did so to increase sales, revenue, and profit from their opioid products.

794. The interaction and length of the relationships between and among the Defendants reflects a deep level of interaction and cooperation between Defendants in a tightly knit industry. The Marketing and Distributor Defendants were not two separate groups operating in isolation or two groups forced to work together in a closed system. The Defendants operated together as a

united entity, working together on multiple fronts, to engage in the unlawful sale of prescription opioids.

795. Defendants collaborated to expand the opioid market in an interconnected and interrelated network in the following ways, as set forth more fully below, including, for example, membership in the Healthcare Distribution Alliance (“HDA”).

796. Defendants utilized their membership in the HDA and other forms of collaboration to form agreements about their approach to their duties under the CSA to report suspicious orders. The Defendants overwhelmingly agreed on the same approach – to fail to identify, report or halt suspicious opioid orders, and fail to prevent diversion. Defendants’ agreement to restrict reporting provided an added layer of insulation from DEA scrutiny for the entire industry as Defendants were thus collectively responsible for each other’s compliance with their reporting obligations. Defendants were aware, both individually and collectively aware of the suspicious orders that flowed directly from Defendants’ facilities.

797. Defendants knew that their own conduct could be reported by other Defendants and that their failure to report suspicious orders they filled could be brought to the DEA’s attention. As a result, Defendants had an incentive to communicate with each other about the reporting or suspicious orders to ensure consistency in their dealings with DEA.

798. The Defendants also worked together to ensure that the opioid quotas allowed by the DEA remained artificially high and ensured that suspicious orders were not reported to the DEA in order to ensure that the DEA had not basis for refusing to increase or decrease production quotas due to diversion.

799. The desired consistency, and collective end goal was achieved. Defendants achieved blockbuster profits through higher opioid sales by orchestrating the unimpeded flow of opioids.

K. Statutes Of Limitations Are Tolloed and Defendants Are Estopped From Asserting Statutes Of Limitations As Defenses

1. Continuing Conduct.

800. Plaintiff contends it continues to suffer harm from the unlawful actions by the Defendants.

801. The continued tortious and unlawful conduct by the Defendants causes a repeated or continuous injury. The damages have not occurred all at once but have continued to occur and have increased as time progresses. The tort is not completed nor have all the damages been incurred until the wrongdoing ceases. The wrongdoing and unlawful activity by Defendants has not ceased. The public nuisance remains unabated. The conduct causing the damages remains unabated.

2. Equitable Estoppel and Fraudulent Concealment

802. Defendants are equitably estopped from relying upon a statute of limitations defense because they undertook active efforts to deceive Plaintiff and to purposefully conceal their unlawful conduct and fraudulently assure the public, including the State, the Plaintiff, and Plaintiff's Community, that they were undertaking efforts to comply with their obligations under the state and federal controlled substances laws, all with the goal of protecting their registered manufacturer or distributor status in the State and to continue generating profits. Notwithstanding the allegations set forth above, the Defendants affirmatively assured the public, including the State, the Plaintiff, and Plaintiff's Community, that they are working to curb the opioid epidemic.

803. The Defendants were deliberate in taking steps to conceal their conspiratorial behavior and active role in the deceptive marketing and the oversupply of opioids through overprescribing and suspicious sales, all of which fueled the opioid epidemic.

804. As set forth herein, the Marketing Defendants deliberately worked through Front Groups purporting to be patient advocacy and professional organizations, through public relations companies hired to work with the Front Groups and through paid KOLs to secretly control messaging, influence prescribing practices and drive sales. The Marketing Defendants concealed their role in shaping, editing, and approving the content of prescribing guidelines, informational brochures, KOL presentations and other false and misleading materials addressing pain management and opioids that were widely disseminated to regulators, prescribers and the public at large. They concealed the addictive nature and dangers associated with opioid use and denied blame for the epidemic attributing it instead solely to abuse and inappropriate prescribing. They manipulated scientific literature and promotional materials to make it appear that misleading statements about the risks, safety and superiority of opioids were actually accurate, truthful, and supported by substantial scientific evidence. Through their public statements, omissions, marketing, and advertising, the Marketing Defendants' deceptions deprived Plaintiff of actual or implied knowledge of facts sufficient to put Plaintiff on notice of potential claims.

805. Defendants also concealed from Plaintiff the existence of Plaintiff's claims by hiding their lack of cooperation with law enforcement and affirmatively seeking to convince the public that their legal duties to report suspicious sales had been satisfied through public assurances that they were working to curb the opioid epidemic. They publicly portrayed themselves as committed to working diligently with law enforcement and others to prevent diversion of these dangerous drugs and curb the opioid epidemic, and they made broad promises

to change their ways insisting they were good corporate citizens. These repeated misrepresentations misled regulators, prescribers and the public, including Plaintiff, and deprived Plaintiff of actual or implied knowledge of facts sufficient to put Plaintiff on notice of potential claims.

806. Plaintiff did not discover the nature, scope and magnitude of Defendants' misconduct, and its full impact on Plaintiff, and could not have acquired such knowledge earlier through the exercise of reasonable diligence.

807. The Marketing Defendants' campaign to misrepresent and conceal the truth about the opioid drugs that they were aggressively pushing in the State and in Plaintiff's Community deceived the medical community, consumers, the State, and Plaintiff's Community.

808. Defendants have also concealed and prevented discovery of information, including data from the ARCOS database, that will confirm their identities and the extent of their wrongful and illegal activities. On April 11, 2018, the Northern District of Ohio ordered the transactional ARCOS data be produced, over Defendants' strenuous objections. In so doing, the Court reviewed its previous decisions on this data and held that, because the transaction data had not yet been produced, the Plaintiff *could not identify* the potential defendants in this litigation, and further held that such information was "critical":

This means Plaintiffs still do not know: (a) which manufacturers (b) sold what types of pills (c) to which distributors; nor do they know (d) which distributors (e) sold what types of pills (f) to which retailers (g) in what locations. In any given case, therefore, the Plaintiff still cannot know for sure who are the correct defendants, or the scope of their potential liability. For example, the ARCOS spreadsheets produced by DEA show the top five distributors of oxycodone in Ohio in 2014 were Cardinal Health, AmerisourceBergen, McKesson, Wal-Mart, and Miami-Luken; but there is no way to know whether (or how much) any of these five entities distributed oxycodone into Seneca County, Ohio (or any other particular venue). . . . [The] DEA and [the] defendants . . .

[have] conceded the data was relevant and necessary to litigation Discovery of precisely which manufacturers sent which drugs to which distributors, and which distributors sent which drugs to which pharmacies and doctors, is critical not only to all of plaintiffs' claims, but also to the Court's understanding of the width and depth of this litigation.

Order of April 11, 2018 [Doc. 233] at pp. 6-7 (footnotes omitted).

809. Defendants intended that their actions and omissions would be relied upon, including by Plaintiff. Plaintiff did not know and did not have the means to know the truth, due to Defendants' actions and omissions.

810. Plaintiff reasonably relied on Defendants' affirmative statements regarding their purported compliance with their obligations under the law and consent orders.

L. Facts Pertaining to Punitive Damages

811. As set forth above, Defendants acted deliberately to increase sales of, and profits from, opioid drugs. The Marketing Defendants knew there was no support for their claims that addiction was rare, that addiction risk could be effectively managed, that signs of addiction were merely "pseudoaddiction," that withdrawal is easily managed, that higher doses pose no significant additional risks, that long-term use of opioids improves function, or that time-release or abuse-deterrent formulations would prevent addiction or abuse. Nonetheless, they knowingly promoted these falsehoods in order to increase the market for their addictive drugs.

812. All of the Defendants, moreover, knew that large and suspicious quantities of opioids were being poured into communities throughout the United States, yet, despite this knowledge, took no steps to report suspicious orders, control the supply of opioids, or otherwise prevent diversion. Indeed, as described above, Defendants acted in concert together to maintain high levels of quotas for their products and to ensure that suspicious orders would not be reported to regulators.

813. Defendants' conduct was so willful and deliberate that it continued in the face of numerous enforcement actions, fines, and other warnings from state and local governments and regulatory agencies. Defendants paid their fines, made promises to do better, and continued on with their marketing and supply schemes. This ongoing course of conduct knowingly, deliberately, and repeatedly threatened and accomplished harm and risk of harm to public health and safety, and large-scale economic loss to communities and government liabilities across the country.

814. Defendants' actions demonstrated both malice and also aggravated and egregious fraud. Defendants engaged in the conduct alleged herein with a conscious disregard for the rights and safety of other persons, even though that conduct had a great probability of causing substantial harm. The Marketing Defendants' fraudulent wrongdoing was done with a particularly gross and conscious disregard.

1. The Marketing Defendants Persisted in Their Fraudulent Scheme Despite Repeated Admonitions, Warnings, and Even Prosecutions

815. So determined were the Marketing Defendants to sell more opioids that they simply ignored multiple admonitions, warnings, and prosecutions. These governmental and regulatory actions included:

a. FDA Warnings to Janssen Failed to Deter Janssen's Misleading Promotion of Duragesic

816. On February 15, 2000, the FDA sent Janssen a letter concerning the dissemination of "homemade" promotional pieces that promoted the Janssen drug Duragesic in violation of the Federal Food, Drug, and Cosmetic Act. In a subsequent letter, dated March 30, 2000, the FDA explained that the "homemade" promotional pieces were "false or misleading because they contain misrepresentations of safety information, broaden Duragesic's indication, contain

unsubstantiated claims, and lack fair balance.” The March 30, 2000 letter detailed numerous ways in which Janssen’s marketing was misleading.

817. The letter did not stop Janssen. On September 2, 2004, the U.S. Department of Health and Human Services (“HHS”) sent Janssen a warning letter concerning Duragesic due to “false or misleading claims about the abuse potential and other risks of the drug, and . . . unsubstantiated effectiveness claims for Duragesic,” including, specifically, “suggesting that Duragesic has a lower potential for abuse compared to other opioid products.” The September 2, 2004 letter detailed a series of unsubstantiated, false, or misleading claims.

818. One year later, Janssen was still at it. On July 15, 2005, the FDA issued a public health advisory warning doctors of deaths resulting from the use of Duragesic and its generic competitor, manufactured by Mylan N.V. The advisory noted that the FDA had been ““examining the circumstances of product use to determine if the reported adverse events may be related to inappropriate use of the patch”” and noted the possibility “that patients and physicians might be unaware of the risks” of using the fentanyl transdermal patch, which is a potent opioid analgesic approved only for chronic pain in opioid-tolerant patients that could not be treated by other drugs.

b. Governmental Action, Including Large Monetary Fines, Failed to Stop Cephalon from Falsely Marketing Actiq for Off-Label Uses

819. On September 29, 2008, Cephalon finalized and entered into a corporate integrity agreement with the Office of the Inspector General of HHS and agreed to pay \$425 million in civil and criminal penalties for its off-label marketing of Actiq and two other drugs (Gabitril and Provigil). According to a DOJ press release, Cephalon had trained sales representatives to disregard restrictions of the FDA-approved label, employed sales representatives and healthcare

professionals to speak to physicians about off-label uses of the three drugs and funded CME to promote off-label uses.

820. Notwithstanding letters, an FDA safety alert, DOJ and state investigations, and the massive settlement, Cephalon has continued its deceptive marketing strategy.

c. FDA Warnings Did Not Prevent Cephalon from Continuing False and Off-Label Marketing of Fentora

821. On September 27, 2007, the FDA issued a public health advisory to address numerous reports that patients who did not have cancer or were not opioid tolerant had been prescribed Fentora, and death or life-threatening side effects had resulted. The FDA warned: “Fentora should not be used to treat any type of short-term pain.” Indeed, FDA specifically denied Cephalon’s application, in 2008, to broaden the indication of Fentora to include treatment of non-cancer breakthrough pain and use in patients who were not already opioid-tolerant.

822. Flagrantly disregarding the FDA’s refusal to broaden the indication for Fentora, Cephalon nonetheless marketed Fentora beyond its approved indications. On March 26, 2009, the FDA warned Cephalon against its misleading advertising of Fentora (“Warning Letter”). The Warning Letter described a Fentora Internet advertisement as misleading because it purported to broaden “the indication for Fentora by implying that any patient with cancer who requires treatment for breakthrough pain is a candidate for Fentora . . . when this is not the case.” It further criticized Cephalon’s other direct Fentora advertisements because they did not disclose the risks associated with the drug.

823. Despite this warning, Cephalon continued to use the same sales tactics to push Fentora as it did with Actiq. For example, on January 13, 2012, Cephalon published an insert in Pharmacy Times titled “An Integrated Risk Evaluation and Mitigation Strategy (REMS) for FENTORA (Fentanyl Buccal Tablet) and ACTIQ (Oral Transmucosal Fentanyl Citrate).”

Despite the repeated warnings of the dangers associated with the use of the drugs beyond their limited indication, as detailed above, the first sentence of the insert states: “It is well recognized that the judicious use of opioids can facilitate effective and safe management of chronic pain.”

d. A Guilty Plea and a Large Fine Did Not Deter Purdue from Continuing Its Fraudulent Marketing of OxyContin

824. In May 2007, Purdue and three of its executives pled guilty to federal charges of misbranding OxyContin in what the company acknowledged was an attempt to mislead doctors about the risk of addiction. Purdue was ordered to pay \$600 million in fines and fees. In its plea, Purdue admitted that its promotion of OxyContin was misleading and inaccurate, misrepresented the risk of addiction and was unsupported by science. Additionally, Michael Friedman, the company’s president, pled guilty to a misbranding charge and agreed to pay \$19 million in fines; Howard R. Udell, Purdue’s top lawyer, also pled guilty and agreed to pay \$8 million in fines; and Paul D. Goldenheim, its former medical director, pled guilty as well and agreed to pay \$7.5 million in fines.

825. Nevertheless, even after the settlement, Purdue continued to pay doctors on speakers’ bureaus to promote the liberal prescribing of OxyContin for chronic pain and fund seemingly neutral organizations to disseminate the message that opioids were non-addictive as well as other misrepresentations. At least until early 2018, Purdue continued to deceptively market the benefits of opioids for chronic pain while diminishing the associated dangers of addiction. After Purdue made its guilty plea in 2007, it assembled an army of lobbyists to fight any legislative actions that might encroach on its business. Between 2006 and 2015, Purdue and other opioid producers, along with their associated nonprofits, spent nearly \$900 million dollars on lobbying and political contributions— eight times what the gun lobby spent during that period.

2. **Repeated Admonishments and Fines Did Not Stop Defendants from Ignoring Their Obligations to Control the Supply Chain and Prevent Diversion**

826. Defendants were repeatedly admonished and even fined by regulatory authorities, but continued to disregard their obligations to control the supply chain of dangerous opioids and to institute controls to prevent diversion.

827. In a *60 Minutes* interview last fall, former DEA agent Joe Rannazzisi described Defendants' industry as "out of control," stating that "[w]hat they wanna do, is do what they wanna do, and not worry about what the law is. And if they don't follow the law in drug supply, people die. That's just it. People die." He further explained that:

JOE RANNAZZISI: The three largest distributors are Cardinal Health, McKesson, and AmerisourceBergen. They control probably 85 or 90 percent of the drugs going downstream.

[INTERVIEWER]: You know the implication of what you're saying, that these big companies knew that they were pumping drugs into American communities that were killing people.

JOE RANNAZZISI: That's not an implication, that's a fact. That's exactly what they did.

828. Another DEA veteran similarly stated that these companies failed to make even a "good faith effort" to "do the right thing." He further explained that "I can tell you with 100 percent accuracy that we were in there on multiple occasions trying to get them to change their behavior. And they just flat out ignored us."

829. Government actions against the Defendants with respect to their obligations to control the supply chain and prevent diversion include:

- a. On April 24, 2007, the DEA issued an Order to Show Cause and Immediate Suspension Order against the AmerisourceBergen Orlando, Florida distribution center ("Orlando Facility") alleging failure to maintain effective controls against diversion of controlled substances. On June 22, 2007, AmerisourceBergen entered into a settlement that resulted in the suspension of its DEA registration;

- b. On November 28, 2007, the DEA issued an Order to Show Cause and Immediate Suspension Order against the Cardinal Health Auburn, Washington Distribution Center ("Auburn Facility") for failure to maintain effective controls against diversion of hydrocodone;
- c. On December 5, 2007, the DEA issued an Order to Show Cause and Immediate Suspension Order against the Cardinal Health Lakeland, Florida Distribution Center ("Lakeland Facility") for failure to maintain effective controls against diversion of hydrocodone;
- d. On December 7, 2007, the DEA issued an Order to Show Cause and Immediate Suspension Order against the Cardinal Health Swedesboro, New Jersey Distribution Center ("Swedesboro Facility") for failure to maintain effective controls against diversion of hydrocodone;
- e. On January 30, 2008, the DEA issued an Order to Show Cause against the Cardinal Health Stafford, Texas Distribution Center ("Stafford Facility") for failure to maintain effective controls against diversion of hydrocodone;
- f. On September 30, 2008, Cardinal Health entered into a Settlement and Release Agreement and Administrative Memorandum of Agreement with the DEA related to its Auburn, Lakeland, Swedesboro and Stafford Facilities. The document also referenced allegations by the DEA that Cardinal failed to maintain effective controls against the diversion of controlled substances at its distribution facilities located in McDonough, Georgia ("McDonough Facility"), Valencia, California ("Valencia Facility") and Denver, Colorado ("Denver Facility");
- g. On February 2, 2012, the DEA issued an Order to Show Cause and Immediate Suspension Order against the Cardinal Health's Lakeland Facility for failure to maintain effective controls against diversion of oxycodone; and
- h. On December 23, 2016, Cardinal Health agreed to pay a \$44 million fine to the DEA to resolve the civil penalty portion of the administrative action taken against its Lakeland Facility.

830. McKesson's deliberate disregard of its obligations was especially flagrant. On May 2, 2008, McKesson Corporation entered into an Administrative Memorandum of Agreement ("2008 McKesson MOA") with the DEA which provided that McKesson would "maintain a compliance program designed to detect and prevent the diversion of controlled

substances, inform DEA of suspicious orders required by 21 C.F.R. § 1301.74(b), and follow the procedures established by its Controlled Substance Monitoring Program.”

831. Despite its 2008 agreement with DEA, McKesson continued to fail to report suspicious orders between 2008 and 2012 and did not fully implement or follow the monitoring program it agreed to. It failed to conduct adequate due diligence of its customers, failed to keep complete and accurate records in the CSMP files maintained for many of its customers and bypassed suspicious order reporting procedures set forth in the CSMP. It failed to take these actions despite its awareness of the great probability that its failure to do so would cause substantial harm.

832. On January 5, 2017, McKesson Corporation entered into an Administrative Memorandum Agreement with the DEA wherein it agreed to pay a \$150 million civil penalty for violation of the 2008 MOA as well as failure to identify and report suspicious orders at its facilities in Aurora, CO; Aurora, IL; Delran, NJ; LaCrosse, WI; Lakeland, FL; Landover, MD; La Vista, NE; Livonia, MI; Methuen, MA; Santa Fe Springs, CA; Washington Courthouse, OH; and West Sacramento, CA. McKesson’s 2017 agreement with DEA documents that McKesson continued to breach its admitted duties by “fail[ing] to properly monitor its sales of controlled substances and/or report suspicious orders to DEA, in accordance with McKesson’s obligations.”

833. As *The Washington Post* and *60 Minutes* recently reported, DEA staff recommended a much larger penalty than the \$150 million ultimately agreed to for McKesson’s continued and renewed breach of its duties, as much as a billion dollars, and delicensing of certain facilities. A DEA memo outlining the investigative findings in connection with the administrative case against 12 McKesson distribution centers included in the 2017 Settlement stated that McKesson “[s]upplied controlled substances in support of criminal diversion

activities”; “[i]gnored blatant diversion”; had a “[p]attern of raising thresholds arbitrarily”; “[f]ailed to review orders or suspicious activity”; and “[i]gnored [the company’s] own procedures designed to prevent diversion.”

834. On December 17, 2017, CBS aired an episode of *60 Minutes* featuring Assistant Special Agent Schiller, who described McKesson as a company that killed people for its own financial gain and blatantly ignored the CSA requirement to report suspicious orders:

DAVID SCHILLER: If they would stayed in compliance with their authority and held those that they’re supplying the pills to, the epidemic would be nowhere near where it is right now. Nowhere near.

* * *

They had hundreds of thousands of suspicious orders they should have reported, and they didn’t report any. There’s not a day that goes by in the pharmaceutical world, in the McKesson world, in the distribution world, where there’s not something suspicious. It happens every day.

[INTERVIEWER:] And they had none.

DAVID SCHILLER: They weren’t reporting any. I mean, you have to understand that, nothing was suspicious?²⁹²

835. Following the 2017 settlement, McKesson shareholders made a books and records request of the company. According to a separate action pending on their behalf, the Company’s records show that the Company’s Audit Committee failed to monitor McKesson’s information reporting system to assess the state of the Company’s compliance with the CSA and McKesson’s 2008 Settlements. More particularly, the shareholder action alleges that the records show that in

²⁹² Bill Whitaker, *Whistleblowers: DEA Attorneys Went Easy on McKesson, the Country’s Largest Drug Distributor*, CBS News (Dec. 17, 2017), <https://www.cbsnews.com/news/whistleblowers-deaattorneys-went-easy-on-mckesson-the-countrys-largest-drug-distributor/>.

October 2008, the Audit Committee had an initial discussion of the 2008 Settlements and results of internal auditing, which revealed glaring omissions; specifically:

- a. some customers had “not yet been assigned thresholds in the system to flag large shipments of controlled substances for review”;
- b. “[d]ocumentation evidencing new customer due diligence was incomplete”;
- c. “documentation supporting the company’s decision to change thresholds for existing customers was also incomplete”; and
- d. Internal Audit “identified opportunities to enhance the Standard Operating Procedures.”

836. Yet, instead of correcting these deficiencies, after that time, for a period of more than four years, the Audit Committee failed to address the CSMP or perform any more audits of McKesson’s compliance with the CSA or the 2008 Settlements, the shareholder action’s description of McKesson’s internal documents reveals. During that period of time, McKesson’s Audit Committee failed to inquire whether the Company was in compliance with obligations set forth in those agreements and with the controlled substances regulations more generally. It was only in January 2013 that the Audit Committee received an Internal Audit report touching on these issues.

837. In short, McKesson, was “neither rehabilitated nor deterred by the 2008 [agreement],” as a DEA official working on the case noted. Quite the opposite, “their bad acts continued and escalated to a level of egregiousness not seen before.” According to statements of “DEA investigators, agents and supervisors who worked on the McKesson case” reported in *The Washington Post*, “the company paid little or no attention to the unusually large and frequent orders placed by pharmacies, some of them knowingly supplying the drug rings.” “Instead, the DEA officials said, the company raised its own self-imposed limits, known as thresholds, on

orders from pharmacies and continued to ship increasing amounts of drugs in the face of numerous red flags.”

838. Since at least 2002, Purdue has maintained a database of health care providers suspected of inappropriately prescribing OxyContin or other opioids. Physicians could be added to this database based on observed indicators of illicit prescribing such as excessive numbers of patients, cash transactions, patient overdoses, and unusual prescribing of the highest-strength pills (80 mg OxyContin pills or “80s,” as they were known on the street, were a prime target for diversion). Purdue claims that health care providers added to the database no longer were detailed, and that sales representatives received no compensation tied to these providers’ prescriptions.

839. Yet, Purdue failed to cut off these providers’ opioid supply at the pharmacy level—meaning Purdue continued to generate sales revenue from their prescriptions—and failed to report these providers to state medical boards or law enforcement. Purdue’s former senior compliance officer acknowledged in an interview with the *Los Angeles Times* that in five years of investigating suspicious pharmacies, the company never stopped the supply of its opioids to a pharmacy, even where Purdue employees personally witnessed the diversion of its drugs.

840. The same was true of prescribers. For example, as discussed above, despite Purdue’s knowledge of illicit prescribing from one Los Angeles clinic which its district manager called an “organized drug ring” in 2009, Purdue did not report its suspicions until long after law enforcement shut it down and not until the ring prescribed more than 1.1 million OxyContin tablets.

841. Indeed, the New York Attorney General found that Purdue placed 103 New York health care providers on its “No-Call” List between January 1, 2008, and March 7, 2015, and yet

that Purdue's sales representatives had detailed approximately two-thirds of these providers, some quite extensively, making more than a total of 1,800 sales calls to their offices over a six-year period.

842. The New York Attorney General similarly found that Endo knew, as early as 2011, that Opana ER was being abused in New York, but certain sales representatives who detailed New York health care providers testified that they did not know about any policy or duty to report problematic conduct. The New York Attorney General further determined that Endo detailed health care providers who were subsequently arrested or convicted for illegal prescribing of opioids a total of 326 times, and these prescribers collectively wrote 1,370 prescriptions for Opana ER (although the subsequent criminal charges at issue did not involve Opana ER).

843. As all of the governmental actions against the Marketing Defendants and against all the Defendants shows, Defendants knew that their actions were unlawful, and yet deliberately refused to change their practices because compliance with their legal obligations would have decreased their sales and their profits.

II. FACTS PERTAINING TO CLAIMS UNDER RACKETEER-INFLUENCED AND CORRUPT ORGANIZATIONS ("RICO") ACT

A. The Opioid Marketing Enterprise

1. The Common Purpose and Scheme of the Opioid Marketing Enterprise

844. Knowing that their products were highly addictive, ineffective and unsafe for the treatment of long-term chronic pain, non-acute and non-cancer pain, the RICO Marketing Defendants²⁹³ formed an association-in-fact enterprise and engaged in a scheme to unlawfully

²⁹³ The RICO Marketing Defendants referred to in this section are those named in the First Claim for Relief under 28 U.S.C. § 1964(c), including Purdue, Cephalon, Janssen, Endo, and Mallinckrodt.

increase their profits and sales, and grow their share of the prescription painkiller market, through repeated and systematic misrepresentations about the safety and efficacy of opioids for treating long-term chronic pain.

845. In order to unlawfully increase the demand for opioids, the RICO Marketing Defendants formed an association-in-fact enterprise (the “Opioid Marketing Enterprise”) with the “Front Groups” and KOLs described above. Through their personal relationships, the members of the Opioid Marketing Enterprise had the opportunity to form and take actions in furtherance of the Opioid Marketing Enterprise’s common purpose. The RICO Marketing Defendants’ substantial financial contribution to the Opioid Marketing Enterprise, and the advancement of opioids-friendly messaging, fueled the U.S. opioids epidemic.²⁹⁴

846. The RICO Marketing Defendants, through the Opioid Marketing Enterprise, concealed the true risks and dangers of opioids from the medical community and the public, including Plaintiff, and made misleading statements and misrepresentations about opioids that downplayed the risk of addiction and exaggerated the benefits of opioid use. The misleading statements included: (1) that addiction is rare among patients taking opioids for pain; (2) that addiction risk can be effectively managed; (3) that symptoms of addiction exhibited by opioid patients are actually symptoms of an invented condition the RICO Marketing Defendants named “pseudoaddiction”; (4) that withdrawal is easily managed; (5) that increased dosing presents no significant risks; (6) that long-term use of opioids improves function; (7) that the risks of alternative forms of pain treatment are greater than the adverse effects of opioids; (8) that use of time-released dosing prevents addiction; and (9) that abuse-deterrent formulations provide a solution to opioid abuse.

²⁹⁴ *Fueling an Epidemic*, *supra* note 128.

847. The scheme devised, implemented and conducted by the RICO Marketing Defendants was a common course of conduct designed to ensure that the RICO Marketing Defendants unlawfully increased their sales and profits through concealment and misrepresentations about the addictive nature and effective use of the RICO Marketing Defendants' drugs. The RICO Marketing Defendants, the Front Groups, and the KOLs acted together for a common purpose and perpetuated the Opioid Marketing Enterprise's scheme, including through the unbranded promotion and marketing network as described above.

848. There was regular communication between the RICO Marketing Defendants, Front Groups and KOLs, in which information was shared, misrepresentations are coordinated, and payments were exchanged. Typically, the coordination, communication and payment occurred, and continues to occur, through the repeated and continuing use of the wires and mail in which the RICO Marketing Defendants, Front Groups, and KOLs share information regarding overcoming objections and resistance to the use of opioids for chronic pain. The RICO Marketing Defendants, Front Groups and KOLs functioned as a continuing unit for the purpose of implementing the Opioid Marketing Enterprise's scheme and common purpose, and each agreed and took actions to hide the scheme and continue its existence.

849. At all relevant times, the Front Groups were aware of the RICO Marketing Defendants' conduct, were knowing and willing participants in and beneficiaries of that conduct. Each Front Group also knew, but did not disclose, that the other Front Groups were engaged in the same scheme, to the detriment of consumers, prescribers, and the Plaintiff. But for the Opioid Marketing Enterprise's unlawful fraud, the Front Groups would have had incentive to disclose the deceit by the RICO Marketing Defendants and the Opioid Marketing Enterprise to their members and constituents. By failing to disclose this information, Front Groups

perpetuated the Opioid Marketing Enterprise's scheme and common purpose, and reaped substantial benefits.

850. At all relevant times, the KOLs were aware of the RICO Marketing Defendants' conduct, were knowing and willing participants in that conduct, and reaped benefits from that conduct. The RICO Marketing Defendants selected KOLs solely because they favored the aggressive treatment of chronic pain with opioids. The RICO Marketing Defendants' support helped the KOLs become respected industry experts. And, as they rose to prominence, the KOLs falsely touted the benefits of using opioids to treat chronic pain, repaying the RICO Marketing Defendants by advancing their marketing goals. The KOLs also knew, but did not disclose, that the other KOLs and Front Groups were engaged in the same scheme, to the detriment of consumers, prescribers, and the Plaintiff. But for the Opioid Marketing Enterprise's unlawful conduct, the KOLs would have had incentive to disclose the deceit by the RICO Marketing Defendants and the Opioid Marketing Enterprise, and to protect their patients and the patients of other physicians. By failing to disclose this information, KOLs furthered the Opioid Marketing Enterprise's scheme and common purpose, and reaped substantial benefits.

851. As public scrutiny and media coverage focused on how opioids ravaged communities in Ohio and throughout the United States, the Front Groups and KOLS did not challenge the RICO Marketing Defendants' misrepresentations, seek to correct their previous misrepresentations, terminate their role in the Opioid Marketing Enterprise, nor disclose publicly that the risks of using opioids for chronic pain outweighed their benefits and were not supported by medically acceptable evidence.

852. The RICO Marketing Defendants, Front Groups and KOLs engaged in certain discrete categories of activities in furtherance of the common purpose of the Opioid Marketing

Enterprise. As described herein, the Opioid Marketing Enterprise's conduct in furtherance of the common purpose of the Opioid Marketing Enterprise involved: (1) misrepresentations regarding the risk of addiction and safe use of prescription opioids for long-term chronic pain (described in detail above); (2) lobbying to defeat measures to restrict over-prescription; (3) efforts to criticize or undermine CDC Guideline; and (4) efforts to limit prescriber accountability.

853. In addition to disseminating misrepresentations about the risks and benefits of opioids, the Opioid Marketing Enterprise also furthered its common purpose by criticizing or undermining CDC Guideline. Members of the Opioid Marketing Enterprise criticized or undermined the CDC Guideline which represented "an important step—and perhaps the first major step from the federal government—toward limiting opioid prescriptions for chronic pain."

854. Several Front Groups, including the U.S. Pain Foundation and the AAPM, criticized the draft guidelines in 2015, arguing that the "CDC slides presented on Wednesday were not transparent relative to process and failed to disclose the names, affiliation, and conflicts of interest of the individuals who participated in the construction of these guidelines."

855. The AAPM criticized the prescribing guidelines in 2016, through its immediate past president, stating "that the CDC guideline makes disproportionately strong recommendations based upon a narrowly selected portion of the available clinical evidence."

856. The RICO Marketing Defendants alone could not have accomplished the purpose of the Opioid Marketing Enterprise without the assistance of the Front Groups and KOLs, who were perceived as "neutral" and more "scientific" than the RICO Marketing Defendants themselves. Without the work of the Front Groups and KOLs in spreading misrepresentations about opioids, the Opioid Marketing Enterprise could not have achieved its common purpose.

857. The impact of the Opioid Marketing Enterprise's scheme is still in place—*i.e.*, the opioids continue to be prescribed and used for chronic pain throughout the area of and the epidemic continues to injure Plaintiff, and consume the resources of Plaintiff's health care and law enforcement systems.

858. As a result, it is clear that the RICO Marketing Defendants, the Front Groups, and the KOLs were each willing participants in the Opioid Marketing Enterprise, had a common purpose and interest in the object of the scheme, and functioned within a structure designed to effectuate the Enterprise's purpose.

2. The Conduct of the Opioid Marketing Enterprise violated Civil RICO

859. From approximately the late 1990s to the present, each of the RICO Marketing Defendants exerted control over the Opioid Marketing Enterprise and participated in the operation or management of the affairs of the Opioid Marketing Enterprise, directly or indirectly, in the following ways:

- a. Creating and providing a body of deceptive, misleading and unsupported medical and popular literature about opioids that (i) understated the risks and overstated the benefits of long-term use; (ii) appeared to be the result of independent, objective research; and (iii) was thus more likely to be relied upon by physicians, patients, and payors;
- b. Creating and providing a body of deceptive, misleading and unsupported electronic and print advertisements about opioids that (i) understated the risks and overstated the benefits of long-term use; (ii) appeared to be the result of independent, objective research; and (iii) was thus more likely to be relied upon by physicians, patients, and payors;
- c. Creating and providing a body of deceptive, misleading and unsupported sales and promotional training materials about opioids that (i) understated the risks and overstated the benefits of long-term use; (ii) appeared to be the result of independent, objective research; and (iii) was thus more likely to be relied upon by physicians, patients, and payors;
- d. Creating and providing a body of deceptive, misleading and unsupported CMEs and speaker presentations about opioids that (i) understated the risks and overstated the benefits of long-term use; (ii) appeared to be the

result of independent, objective research; and (iii) was thus more likely to be relied upon by physicians, patients, and payors;

- e. Selecting, cultivating, promoting and paying KOLs based solely on their willingness to communicate and distribute the RICO Marketing Defendants' messages about the use of opioids for chronic pain;
- f. Providing substantial opportunities for KOLs to participate in research studies on topics the RICO Marketing Defendants suggested or chose, with the predictable effect of ensuring that many favorable studies appeared in the academic literature;
- g. Paying KOLs to serve as consultants or on the RICO Marketing Defendants' advisory boards, on the advisory boards and in leadership positions on Front Groups, and to give talks or present CMEs, typically over meals or at conferences;
- h. Selecting, cultivating, promoting, creating and paying Front Groups based solely on their willingness to communicate and distribute the RICO Marketing Defendants' messages about the use of opioids for chronic pain;
- i. Providing substantial opportunities for Front Groups to participate in and/or publish research studies on topics the RICO Marketing Defendants suggested or chose (and paid for), with the predictable effect of ensuring that many favorable studies appeared in the academic literature;
- j. Paying significant amounts of money to the leaders and individuals associated with Front Groups;
- k. Donating to Front Groups to support talks or CMEs, that were typically presented over meals or at conferences;
- l. Disseminating many of their false, misleading, imbalanced, and unsupported statements through unbranded materials that appeared to be independent publications from Front Groups;
- m. Sponsoring CME programs put on by Front Groups that focused exclusively on the use of opioids for chronic pain;
- n. Developing and disseminating pro-opioid treatment guidelines with the help of the KOLs as authors and promoters, and the help of the Front Groups as publishers, and supporters;
- o. Encouraging Front Groups to disseminate their pro-opioid messages to groups targeted by the RICO Marketing Defendants, such as veterans and the elderly, and then funding that distribution;

- p. Concealing their relationship to and control of Front Groups and KOLs from the Plaintiff and the public at large; and
- q. Intending that Front Groups and KOLs would distribute through the U.S. mail and interstate wire facilities, promotional and other materials that claimed opioids could be safely used for chronic pain.

860. The Opioid Marketing Enterprise had a hierarchical decision-making structure that was headed by the RICO Marketing Defendants and corroborated by the KOLs and Front Groups. The RICO Marketing Defendants controlled representations made about their opioids and their drugs, doled out funds to PBMs and payments to KOLs, and ensured that representations made by KOLs, Front Groups, and the RICO Marketing Defendants' sales detailers were consistent with the Marketing Defendants' messaging throughout the United States and Ohio. The Front Groups and KOLs in the Opioid Marketing Enterprise were dependent on the Marketing Defendants for their financial structure and for career development and promotion opportunities.

861. The Front Groups also conducted and participated in the conduct of the Opioid Marketing Enterprise, directly or indirectly, in the following ways:

- a. The Front Groups promised to, and did, make representations regarding opioids and the RICO Marketing Defendants' drugs that were consistent with the RICO Marketing Defendants' messages;
- b. The Front Groups distributed, through the U.S. Mail and interstate wire facilities, promotional and other materials which claimed that opioids could be safely used for chronic pain without addiction, and misrepresented the benefits of using opioids for chronic pain outweighed the risks;
- c. The Front Groups echoed and amplified messages favorable to increased opioid use—and ultimately, the financial interests of the RICO Marketing Defendants;
- d. The Front Groups issued guidelines and policies minimizing the risk of opioid addiction and promoting opioids for chronic pain;

- e. The Front Groups strongly criticized the 2016 guidelines from the Center for Disease Control and Prevention (CDC) that recommended limits on opioid prescriptions for chronic pain; and
- f. The Front Groups concealed their connections to the KOLs and the RICO Marketing Defendants.

862. The RICO Marketing Defendants' Front Groups, "with their large numbers and credibility with policymakers and the public—have 'extensive influence in specific disease areas.'" The larger Front Groups "likely have a substantial effect on policies relevant to their industry sponsors."²⁹⁵ "By aligning medical culture with industry goals in this way, many of the groups described in this report may have played a significant role in creating the necessary conditions for the U.S. opioid epidemic."²⁹⁶

863. The KOLs also participated in the conduct of the affairs of the Opioid Marketing Enterprise, directly or indirectly, in the following ways:

- a. The KOLs promised to, and did, make representations regarding opioids and the RICO Marketing Defendants' drugs that were consistent with the Marketing Defendants' messages themselves;
- b. The KOLs distributed, through the U.S. Mail and interstate wire facilities, promotional and other materials which claimed that opioids could be safely used for chronic pain without addiction, and misrepresented the benefits of using opioids for chronic pain outweighed the risks;
- c. The KOLs echoed and amplified messages favorable to increased opioid use—and ultimately, the financial interests of the RICO Marketing Defendants;
- d. The KOLs issued guidelines and policies minimizing the risk of opioid addiction and promoting opioids for chronic pain;
- e. The KOLs strongly criticized the 2016 guidelines from the Center for Disease Control and Prevention (CDC) that recommended limits on opioid prescriptions for chronic pain; and

²⁹⁵ *Id.* at 2.

²⁹⁶ *Id.*

- f. The KOLs concealed their connections to the Front Groups and the RICO Marketing Defendants, and their sponsorship by the RICO Marketing Defendants.

864. The scheme devised and implemented by the RICO Marketing Defendants and members of the Opioid Marketing Enterprise, amounted to a common course of conduct intended to increase the RICO Marketing Defendants' sales from prescription opioids by encouraging the prescribing and use of opioids for long-term chronic pain. The scheme was a continuing course of conduct, and many aspects of it continue through to the present.

3. The RICO Marketing Defendants Controlled and Paid Front Groups and KOLs to Promote and Maximize Opioid Use

865. As discussed in detail above, the RICO Marketing Defendants funded and controlled the various Front Groups, including APF, AAPM/APS, FSMB, Alliance for Patient Access, USPF, and AGS. The Front Groups, which appeared to be independent, but were not, transmitted the RICO Marketing Defendants' misrepresentations. The RICO Marketing Defendants and the Front Groups thus worked together to promote the goals of the Opioid Marketing Enterprise.

866. The RICO Marketing Defendants worked together with each other through the Front Groups that they jointly funded and through which they collaborated on the joint promotional materials described above.

867. Similarly, as discussed in detail above, the RICO Marketing Defendants paid KOLs, including Drs. Portenoy, Fine, Fishman, and Webster, to spread their misrepresentations and promote their products. The RICO Marketing Defendants and the KOLs thus worked together to promote the goals of the Opioid Marketing Enterprise.

4. Pattern of Racketeering Activity

868. The RICO Marketing Defendants' scheme described herein was perpetrated, in part, through multiple acts of mail fraud and wire fraud, constituting a pattern of racketeering activity as described herein.

869. The pattern of racketeering activity used by the RICO Marketing Defendants and the Opioid Marketing Enterprise likely involved thousands of separate instances of the use of the U.S. Mail or interstate wire facilities in furtherance of the unlawful Opioid Marketing Enterprise, including essentially uniform misrepresentations, concealments and material omissions regarding the beneficial uses and non-addictive qualities for the long-term treatment of chronic, non-acute and non-cancer pain, with the goal of profiting from increased sales of the RICO Marketing Defendants' drugs induced by consumers, prescribers, regulators and Plaintiff's reliance on the RICO Marketing Defendants' misrepresentations.

870. Each of these fraudulent mailings and interstate wire transmissions constitutes racketeering activity and collectively, these violations constitute a pattern of racketeering activity, through which the RICO Marketing Defendants, the Front Groups and the KOLs defrauded and intended to defraud Ohio consumers, the State, and other intended victims.

871. The RICO Marketing Defendants devised and knowingly carried out an illegal scheme and artifice to defraud by means of materially false or fraudulent pretenses, representations, promises, or omissions of material facts regarding the safe, non-addictive and effective use of opioids for long-term chronic, non-acute and non-cancer pain. The RICO Marketing Defendants and members of the Opioid Marketing Enterprise knew that these representations violated the FDA approved use these drugs, and were not supported by actual evidence. The RICO Marketing Defendants intended that that their common purpose and scheme to defraud would, and did, use the U.S. Mail and interstate wire facilities, intentionally

and knowingly with the specific intent to advance, and for the purpose of executing, their illegal scheme.

872. By intentionally concealing the material risks and affirmatively misrepresenting the benefits of using opioids for chronic pain, to, prescribers, regulators and the public, including Plaintiff, the RICO Marketing Defendants, the Front Groups and the KOLs engaged in a fraudulent and unlawful course of conduct constituting a pattern of racketeering activity.

873. The RICO Marketing Defendants' use of the U.S. Mail and interstate wire facilities to perpetrate the opioids marketing scheme involved thousands of communications, publications, representations, statements, electronic transmissions, payments, including, *inter alia*:

- a. Marketing materials about opioids, and their risks and benefits, which the RICO Marketing Defendants sent to health care providers, transmitted through the internet and television, published, and transmitted to Front Groups and KOLs located across the country and the State;
- b. Written representations and telephone calls between the RICO Marketing Defendants and Front Groups regarding the misrepresentations, marketing statements and claims about opioids, including the non-addictive, safe use of chronic long-term pain generally;
- c. Written representations and telephone calls between the RICO Marketing Defendants and KOLs regarding the misrepresentations, marketing statements and claims about opioids, including the non-addictive, safe use of chronic long-term pain generally
- d. E-mails, telephone and written communications between the RICO Marketing Defendants and the Front Groups agreeing to or implementing the opioids marketing scheme;
- e. E-mails, telephone and written communications between the RICO Marketing Defendants and the KOLs agreeing to or implementing the opioids marketing scheme;
- f. Communications between the RICO Marketing Defendants, Front Groups and the media regarding publication, drafting of treatment guidelines, and the dissemination of the same as part of the Opioid Marketing Enterprise;

- g. Communications between the RICO Marketing Defendants, KOLs and the media regarding publication, drafting of treatment guidelines, and the dissemination of the same as part of the Opioid Marketing Enterprise;
- h. Written and oral communications directed to State agencies, federal and state courts, and private insurers throughout the State that fraudulently misrepresented the risks and benefits of using opioids for chronic pain; and
- i. Receipts of increased profits sent through the U.S. Mail and interstate wire facilities—the wrongful proceeds of the scheme.

874. In addition to the above-referenced predicate acts, it was intended by and foreseeable to the RICO Marketing Defendants that the Front Groups and the KOLs would distribute publications through the U.S. Mail and by interstate wire facilities, and, in those publications, claim that the benefits of using opioids for chronic pain outweighed the risks of doing so.

875. To achieve the common goal and purpose of the Opioid Marketing Enterprise, the RICO Marketing Defendants and members of the Opioid Marketing Enterprise hid from the consumers, prescribers, regulators and the Plaintiff: (a) the fraudulent nature of the RICO Marketing Defendants' marketing scheme; (b) the fraudulent nature of statements made by the RICO Marketing Defendants and by their KOLs, Front Groups and other third parties regarding the safety and efficacy of prescription opioids; and (c) the true nature of the relationship between the members of the Opioid Marketing Enterprise.

876. The RICO Marketing Defendants, and each member of the Opioid Marketing Enterprise agreed, with knowledge and intent, to the overall objective of the RICO Marketing Defendants' fraudulent scheme and participated in the common course of conduct to commit acts of fraud and indecency in marketing prescription opioids.

877. Indeed, for the RICO Marketing Defendants' fraudulent scheme to work, each of them had to agree to implement similar tactics regarding fraudulent marketing of prescription

opioids. This conclusion is supported by the fact that the RICO Marketing Defendants each financed, supported, and worked through the same KOLs and Front Groups, and often collaborated on and mutually supported the same publications, CMEs, presentations, and prescription guidelines

878. The RICO Marketing Defendants' predicate acts all had the purpose of creating the opioid epidemic that substantially injured Plaintiff's business and property, while simultaneously generating billion-dollar revenue and profits for the RICO Marketing Defendants. The predicate acts were committed or caused to be committed by the RICO Marketing Defendants through their participation in the Opioid Marketing Enterprise and in furtherance of its fraudulent scheme.

B. The Opioid Supply Chain Enterprise

879. Faced with the reality that they will now be held accountable for the consequences of the opioid epidemic they created, members of the industry resort to "a categorical denial of any criminal behavior or intent."²⁹⁷ Defendants' actions went far beyond what could be considered ordinary business conduct. For more than a decade, certain Defendants, the "RICO Supply Chain Defendants" (Purdue, Cephalon, Endo, Mallinckrodt, Actavis, McKesson, Cardinal, and AmerisourceBergen) worked together in an illicit enterprise, engaging in conduct that was not only illegal, but in certain respects anti-competitive, with the common purpose and achievement of vastly increasing their respective profits and revenues by exponentially expanding a market that the law intended to restrict.

²⁹⁷ McKesson Responds to Recent 60 Minutes Story About January 2017 Settlement With the Federal Government, McKesson, <http://www.mckesson.com/about-mckesson/fighting-opioid-abuse/60-minutes-response> (last visited, Apr. 21, 2018).

880. Knowing that dangerous drugs have a limited place in our society, and that their dissemination and use must be vigilantly monitored and policed to prevent the harm that drug abuse and addiction causes to individuals, society and governments, Congress enacted the Controlled Substances Act (“CSA”). Specifically, through the CSA, which created a closed system of distribution for controlled substances, Congress established an enterprise for good. The CSA imposes a reporting duty that cuts across company lines. Regulations adopted under the CSA require that companies who are entrusted with permission to operate within this system cannot simply operate as competitive in an “anything goes” profit-maximizing market. Instead, the statute tasks them to watch over each other with a careful eye for suspicious activity. Driven by greed, Defendants betrayed that trust and subverted the constraints of the CSA’s closed system to conduct their own enterprise for evil.

881. As “registrants” under the CSA, the RICO Supply Chain Defendants are duty bound to identify and report “orders of unusual size, orders deviating substantially from a normal pattern, and orders of unusual frequency.”²⁹⁸ Critically, these Defendants’ responsibilities do not end with the products they manufacture or distribute—there is no such limitation in the law because their duties cut across company lines. Thus, when these Defendants obtain information about the sales and distribution of other companies’ opioid products, as they did through data mining companies like IMS Health, they were legally obligated to report that activity to the DEA.

882. If morality and the law did not suffice, competition dictates that the RICO Supply Chain Defendants would turn in their rivals when they had reason to suspect suspicious activity. Indeed, if a manufacturer or distributor could gain market share by reporting a competitor’s

²⁹⁸ 21 C.F.R. 1301.74(b).

illegal behavior (causing it to lose a license to operate, or otherwise inhibit its activity), ordinary business conduct dictates that it would do so. Under the CSA this whistleblower or watchdog function is not only a protected choice, but a statutory mandate. Unfortunately, however, that is not what happened. Instead, knowing that investigations into potential diversion would only lead to shrinking markets. The RICO Supply Chain Defendants elected to operate in a conspiracy of silence, in violation of both the CSA and RICO.

883. The RICO Supply Chain Defendants' scheme required the participation of all. If any one member broke rank, its compliance activities would highlight deficiencies of the others, and the artificially high quotas they maintained through their scheme would crumble. But, if all the members of the enterprise conducted themselves in the same manner, it would be difficult for the DEA to go after any one of them. Accordingly, through the connections they made as a result of their participation in the Healthcare Distribution Alliance ("HDA"), the RICO Supply Chain Defendants chose to flout the closed system designed to protect citizens. Publicly, in 2008, they announced their formulation of "Industry Compliance Guidelines: Reporting Suspicious Orders and Prevention Diversion of Controlled Substances." But, privately, the RICO Supply Chain Defendants refused to act and through their lobbying efforts, they collectively sought to undermine the impact of the CSA. Indeed, despite the issuance of these Industry Compliance Guidelines, which recognize these Defendants' duties under the law, as illustrated by the subsequent industry-wide enforcement actions and consent orders issued after that time, none of them complied. John Gray, President and CEO of the HDA said to Congress in 2014, it is "difficult to find the right balance between proactive anti-diversion efforts while not inadvertently limiting access to appropriately prescribed and dispensed medications." Yet, the

RICO Supply Chain Defendants apparently all found the same profit-maximizing balance -- intentionally remaining silent to ensure the largest possible financial return.

884. As described above, at all relevant times, the RICO Supply Chain Defendants operated as an association-in-fact enterprise formed for the purpose of unlawfully increasing sales, revenues and profits by fraudulently increasing the quotas set by the DEA that would allow them to collectively benefit from a greater pool of prescription opioids to manufacture and distribute. In support of this common purpose and fraudulent scheme, the RICO Supply Chain Defendants jointly agreed to disregard their statutory duties to identify, investigate, halt and report suspicious orders of opioids and diversion of their drugs into the illicit market so that those orders would not result in a decrease, or prevent an increase in, the necessary quotas.

885. At all relevant times, as described above, the RICO Supply Chain Defendants exerted control over, conducted and/or participated in the Opioid Supply Chain Enterprise by fraudulently claiming that they were complying with their duties under the CSA to identify, investigate and report suspicious orders of opioids in order to prevent diversion of those highly addictive substances into the illicit market, and to halt such unlawful sales, so as to increase production quotas and generate unlawful profits, as follows:

886. The RICO Supply Chain Defendants disseminated false and misleading statements to state and federal regulators claiming that:

- a. the quotas for prescription opioids should be increased;
- b. they were complying with their obligations to maintain effective controls against diversion of their prescription opioids;
- c. they were complying with their obligations to design and operate a system to disclose to the registrant suspicious orders of their prescription opioids;
- d. they were complying with their obligation to notify the DEA of any suspicious orders or diversion of their prescription opioids; and

- e. they did not have the capability to identify suspicious orders of controlled substances.

887. The Defendants applied political and other pressure on the DOJ and DEA to halt prosecutions for failure to report suspicious orders of prescription opioids and lobbied Congress to strip the DEA of its ability to immediately suspend registrations pending investigation by passing the “Ensuring Patient Access and Effective Drug Enforcement Act.”²⁹⁹

888. The CSA and the Code of Federal Regulations, require the RICO Supply Chain Defendants to make reports to the DEA of any suspicious orders identified through the design and operation of their system to disclose suspicious orders. The failure to make reports as required by the CSA and Code of Federal Regulations amounts to a criminal violation of the statute.

889. The RICO Supply Chain Defendants knowingly and intentionally furnished false or fraudulent information in their reports to the DEA about suspicious orders, and/or omitted material information from reports, records and other document required to be filed with the DEA including the Marketing Defendants’ applications for production quotas. Specifically, the RICO Supply Chain Defendants were aware of suspicious orders of prescription opioids and the

²⁹⁹ *HDMA is Now the Healthcare Distribution Alliance*, Pharmaceutical Commerce, <http://pharmaceuticalcommerce.com/business-and-finance/hdma-now-healthcare-distribution-alliance/>. (Last Updated July 6, 2016), ; Lenny Bernstein & Scott Higham, *Investigation: The DEA Slowed Enforcement While the Opioid Epidemic Grew Out of Control*, Wash. diversion of their prescription opioids into the illicit market, and failed to report this information to the DEA in their mandatory reports and their applications for production quotas.

890. The RICO Supply Chain Defendants used, directed the use of, and/or caused to be used, thousands of interstate mail and wire communications in service of their scheme through virtually uniform misrepresentations, concealments and material omissions regarding their compliance with their mandatory reporting requirements and the actions necessary to carry out their unlawful goal of selling prescription opioids without reporting suspicious orders or the diversion of opioids into the illicit market.

891. In devising and executing the illegal scheme, the RICO Supply Chain Defendants devised and knowingly carried out a material scheme and/or artifice to defraud by means of materially false or fraudulent pretenses, representations, promises, or omissions of material facts.

892. For the purpose of executing the illegal scheme, the RICO Supply Chain Defendants committed racketeering acts, which number in the thousands, intentionally and knowingly with the specific intent to advance the illegal scheme. These racketeering acts, which included repeated acts of mail fraud and wire fraud, constituted a pattern of racketeering.

893. The RICO Supply Chain Defendants' use of the mail and wires includes, but is not limited to, the transmission, delivery, or shipment of the following by the Marketing Defendants, the Distributor Defendants, or third parties that were foreseeably caused to be sent as a result of the RICO Supply Chain Defendants' illegal scheme, including but not limited to:

- a. The prescription opioids themselves;
- b. Documents and communications that supported and/or facilitated the RICO Supply Chain Defendants' request for higher aggregate production quotas, individual production quotas, and procurement quotas;
- c. Documents and communications that facilitated the manufacture, purchase and sale of prescription opioids;

- d. RICO Supply Chain Defendants' DEA registrations;
- e. Documents and communications that supported and/or facilitated RICO Supply Chain Defendants' DEA registrations;
- f. RICO Supply Chain Defendants' records and reports that were required to be submitted to the DEA pursuant to 21 U.S.C. § 827;
- g. Documents and communications related to the RICO Supply Chain Defendants' mandatory DEA reports pursuant to 21 U.S.C. § 823 and 21 C.F.R. § 1301.74;
- h. Documents intended to facilitate the manufacture and distribution of the RICO Supply Chain Defendants' prescription opioids, including bills of lading, invoices, shipping records, reports and correspondence;
- i. Documents for processing and receiving payment for prescription opioids;
- j. Payments from the Distributors to the Marketing Defendants;
- k. Rebates and chargebacks from the Marketing Defendants to the Distributors Defendants;
- l. Payments to the RICO Supply Chain Defendants' lobbyists through the PCF;
- m. Payments to the RICO Supply Chain Defendants' trade organizations, like the HDA, for memberships and/or sponsorships;
- n. Deposits of proceeds from the RICO Supply Chain Defendants' manufacture and distribution of prescription opioids; and
- o. Other documents and things, including electronic communications.

894. The RICO Supply Chain Defendants (and/or their agents), for the purpose of executing the illegal scheme, sent and/or received (or caused to be sent and/or received) by mail or by private or interstate carrier, shipments of prescription opioids and related documents by mail or by private carrier affecting interstate commerce, including the following:

Defendant Group Name	Company Names	Drugs		
		Drug Name	Chemical Name	CSA Schedule
Purdue	(1) Purdue Pharma, LP, (2) Purdue Pharma, Inc., (3) The Purdue Frederick Company	OxyContin	Oxycodone hydrochloride extended release	Schedule II
		MS Contin	Morphine sulfate extended release	Schedule II
		Dilaudid	Hydromorphone hydrochloride	Schedule II
		Dilaudid-HP	Hydromorphone hydrochloride	Schedule II
		Butrans	Buprenorphine	Schedule II
		Hysinga ER	Hydrocodone bitrate	Schedule II
		Targiniq ER	Oxycodone hydrochloride	Schedule II
Cephalon	(1) Cephalon, Inc., (2) Teva Pharmaceutical Industries, Ltd., (3) Teva Pharmaceuticals USA, Inc.	Actiq	Fentanyl citrate	Schedule II

Defendant Group Name	Company Names	Drugs		
		Drug Name	Chemical Name	CSA Schedule
	(2) Actavis LLC,	Norco (Generic of Kadian)	Hydrocodone and acetaminophen	Schedule II
	(3) Actavis Pharma, Inc.,			
	(4) Actavis Plc,	Generic Duragesic	Fentanyl	Schedule II
	(5) Actavis, Inc.,			
	(6) Watson Pharmaceuticals, Inc.,	Generic Opana	Oxymorphone hydrochloride	Schedule II
	(7) Watson Pharma, Inc.			

895. Each of the RICO Supply Chain Defendants, identified manufactured, shipped, paid for and received payment for the drugs identified above, throughout the United States.

896. The RICO Supply Chain Defendants used the internet and other electronic facilities to carry out their scheme and conceal the ongoing fraudulent activities. Specifically, the RICO Supply Chain Defendants made misrepresentations about their compliance with Federal and State laws requiring them to identify, investigate and report suspicious orders of prescription opioids and/or diversion of the same into the illicit market.

897. At the same time, the RICO Supply Chain Defendants misrepresented the superior safety features of their order monitoring programs, ability to detect suspicious orders, commitment to preventing diversion of prescription opioids, and their compliance with all state and federal regulations regarding the identification and reporting of suspicious orders of prescription opioids.

898. The RICO Supply Chain Defendants utilized the internet and other electronic resources to exchange communications, to exchange information regarding prescription opioid sales, and to transmit payments and rebates/chargebacks.

899. The RICO Supply Chain Defendants also communicated by U.S. Mail, by interstate facsimile, and by interstate electronic mail with each other and with various other

affiliates, regional offices, regulators, distributors, and other third-party entities in furtherance of the scheme.

900. The mail and wire transmissions described herein were made in furtherance of the RICO Supply Chain Defendants' scheme and common course of conduct to deceive regulators, the public and the Plaintiff that these Defendants were complying with their state and federal obligations to identify and report suspicious orders of prescription opioids all while Defendants were knowingly allowing millions of doses of prescription opioids to divert into the illicit drug market. The RICO Supply Chain Defendants' scheme and common course of conduct was to increase or maintain high production quotas for their prescription opioids from which they could profit.

901. Many of the precise dates of the fraudulent uses of the U.S. mail and interstate wire facilities have been deliberately hidden by Defendants and cannot be alleged without access to Defendants' books and records. However, Plaintiff has described the types of, and in some instances, occasions on which the predicate acts of mail and/or wire fraud occurred. They include thousands of communications to perpetuate and maintain the scheme, including the things and documents described in the preceding paragraphs.

902. The RICO Supply Chain Defendants did not undertake the practices described herein in isolation, but as part of a common scheme. Various other persons, firms, and corporations, including third-party entities and individuals not named as defendants in this Complaint, may have contributed to and/or participated in the scheme with these Defendants in these offenses and have performed acts in furtherance of the scheme to increase revenues, increase market share, and /or minimize the losses for the RICO Supply Chain Defendants.

903. The predicate acts constituted a variety of unlawful activities, each conducted with the common purpose of obtaining significant monies and revenues from the sale of their highly addictive and dangerous drugs. The predicate acts also had the same or similar results, participants, victims, and methods of commission. The predicate acts were related and not isolated events.

904. The predicate acts all had the purpose of creating the opioid epidemic that substantially injured Plaintiff's business and property, while simultaneously generating billion-dollar revenue and profits for the RICO Supply Chain Defendants. The predicate acts were committed or caused to be committed by the Defendants through their participation in the Opioid Supply Chain Enterprise and in furtherance of its fraudulent scheme.

905. As described above, the RICO Supply Chain Defendants were repeatedly warned, fined, and found to be in violation of applicable law and regulations, and yet they persisted. The sheer volume of enforcement actions against the RICO Supply Chain Defendants supports this conclusion that the RICO Supply Chain Defendants operated through a pattern and practice of willfully and intentionally omitting information from their mandatory reports to the DEA as required by 21 C.F.R. § 1301.74.³⁰⁰

906. Each instance of racketeering activity alleged herein was related, had similar purposes, involved the same or similar participants and methods of commission, and had similar results affecting similar victims, Plaintiff's Community and the Plaintiff. The RICO Supply Chain Defendants calculated and intentionally crafted the diversion scheme to increase and maintain profits from unlawful sales of opioids, without regard to the effect such behavior would

³⁰⁰ Evaluation and Inspections Div., Office of the Inspector Gen., U.S. Dep't of Justice, *The Drug Enforcement Administration's Adjudication of Registrant Actions* 6 (2014), <https://oig.justice.gov/reports/2014/e1403.pdf>.

have on this jurisdiction, its citizens or the Plaintiff. The RICO Supply Chain Defendants were aware that Plaintiff and the citizens of this jurisdiction rely on these Defendants to maintain a closed system of manufacturing and distribution to protect against the non-medical diversion and use of their dangerously addictive opioid drugs.

907. By intentionally refusing to report and halt suspicious orders of their prescription opioids, the RICO Supply Chain Defendants engaged in a fraudulent scheme and unlawful course of conduct constituting a pattern of racketeering activity.

CLAIMS FOR RELIEF

FIRST CLAIM FOR RELIEF

**Violation of RICO, 18 U.S.C. § 1961 *et seq.* – Opioid Marketing Enterprise
(Against Purdue, Cephalon, Janssen, Endo, Mallinckrodt
(the “RICO Marketing Defendants”)
(Brought by The County of Cuyahoga, the Plaintiff in this Count)**

908. Plaintiff repeats, re-alleges, and incorporates by reference each and every allegation set forth above as if fully set forth herein.

909. The RICO Marketing Defendants—through the use of “Front Groups” that appeared to be independent of the RICO Marketing Defendants; through the dissemination of publications that supported the RICO Marketing Defendants’ scheme; through continuing medical education (“CME”) programs controlled and/or funded by the RICO Marketing Defendants; by the hiring and deployment of so-called “key opinion leaders,” (“KOLs”) who were paid by the RICO Marketing Defendants to promote their message; and through the “detailing” activities of the RICO Marketing Defendants’ sales forces—conducted an association-in-fact enterprise, and/or participated in the conduct of an enterprise through a pattern of illegal activities (the predicate racketeering acts of mail and wire fraud) to carry-out the common purpose of the Opioid Marketing Enterprise, *i.e.*, to unlawfully increase profits and

revenues from the continued prescription and use of opioids for long-term chronic pain.

Through the racketeering activities of the Opioid Marketing Enterprise sought to further the common purpose of the enterprise through a fraudulent scheme to change prescriber habits and public perception about the safety and efficacy of opioid use by convincing them that each of the nine false propositions alleged earlier were true. In so doing, each of the RICO Marketing Defendants knowingly conducted and participated in the conduct of the Opioid Marketing Activities by engaging in mail and wire fraud in violation of 18 U.S.C. §§ 1962(c) and (d).

910. The Opioid Marketing Enterprise alleged above is an association-in-fact enterprise that consists of the RICO Marketing Defendants (Purdue, Cephalon, Janssen, Endo, and Mallinckrodt); the Front Groups (APF, AAPM, APS, FSMB, USPF, and AGS); and the KOLs (Dr. Portenoy, Dr. Webster, Dr. Fine, and Dr. Fishman).

911. Each of the RICO Marketing Defendants and the other members of the Opioid Marketing Enterprise conducted and participated in the conduct of the Opioid Marketing Enterprise by playing a distinct role in furthering the enterprise's common purpose of increasing profits and sales through the knowing and intentional dissemination of false and misleading information about the safety and efficacy of long-term opioid use, and the risks and symptoms of addiction, in order increase the market for prescription opioids by changing prescriber habits and public perceptions and increase the market for opioids.

912. Specifically, the RICO Marketing Defendants each worked together to coordinate the enterprise's goals and conceal their role, and the enterprise's existence, from the public by, among other things, (i) funding, editing and distributing publications that supported and advanced their false messages; (ii) funding KOLs to further promote their false messages; (iii) funding, editing and distributing CME programs to advance their false messages; and

(iv) tasking their own employees to direct deceptive marketing materials and pitches directly at physicians and, in particular, at physicians lacking the expertise of pain care specialists (a practice known as sales detailing).

913. Each of the Front Groups helped disguise the role of RICO Marketing Defendants by purporting to be unbiased, independent patient-advocacy and professional organizations in order to disseminate patient education materials, a body of biased and unsupported scientific “literature,” and “treatment guidelines” that promoted the RICO Marketing Defendants’ false messages.

914. The KOLs were physicians chosen and paid by each of the RICO Marketing Defendants to influence their peers’ medical practice by promoting the Marketing Defendants’ false messages through, among other things, writing favorable journal articles and delivering supportive CMEs as if they were independent medical professionals, thereby further obscuring the RICO Marketing Defendants’ role in the enterprise and the enterprise’s existence.

915. Furthermore, each of the RICO Marketing Defendants, KOLs, and Front Groups that made up the Opioid Marketing Enterprise had systematic links to and personal relationships with each other through joint participation in lobbying groups, trade industry organizations, contractual relationships and continuing coordination of activities. The systematic links and personal relationships that were formed and developed allowed members of the Opioid Marketing Enterprise the opportunity to form the common purpose and agree to conduct and participate in the conduct of the Opioid Marketing Enterprise. Specifically, each of the RICO Marketing Defendants coordinated their efforts through the same KOLs and Front Groups, based on their agreement and understanding that the Front Groups and KOLs were industry friendly and would work together with the RICO Marketing Defendants to advance the common purpose

of the Opioid Marketing Enterprise; each of the individuals and entities who formed the Opioid Marketing Enterprise acted to enable the common purpose and fraudulent scheme of the Opioid Marketing Enterprise.

916. At all relevant times, the Opioid Marketing Enterprise: (a) had an existence separate and distinct from each RICO Marketing Defendant and its members; (b) was separate and distinct from the pattern of racketeering in which the RICO Marketing Defendants engaged; (c) was an ongoing and continuing organization consisting of individuals, persons, and legal entities, including each of the RICO Marketing Defendants; (d) was characterized by interpersonal relationships between and among each member of the Opioid Marketing Enterprise, including between the RICO Marketing Defendants and each of the Front Groups and KOLs; and (e) had sufficient longevity for the enterprise to pursue its purpose and functioned as a continuing unit.

917. The persons and entities engaged in the Opioid Marketing Enterprise are systematically linked through contractual relationships, financial ties, personal relationships, and continuing coordination of activities, as spearheaded by the RICO Marketing Defendants.

918. The RICO Marketing Defendants conducted and participated in the conduct of the Opioid Marketing Enterprise through a pattern of racketeering activity that employed the use of mail and wire facilities, in violation of 18 U.S.C. § 1341 (mail fraud) and § 1343 (wire fraud), to increase profits and revenue by changing prescriber habits and public perceptions in order to increase the prescription and use of prescription opioids, and expand the market for opioids.

919. The RICO Marketing Defendants each committed, conspired to commit, and/or aided and abetted in the commission of at least two predicate acts of racketeering activity (*i.e.* violations of 18 U.S.C. §§ 1341 and 1343) within the past ten years. The multiple acts of

rackeering activity that the RICO Marketing Defendants committed, or aided and abetted in the commission of, were related to each other, posed a threat of continued rackeering activity, and therefore constitute a “pattern of rackeering activity.” The rackeering activity was made possible by the RICO Marketing Defendants’ regular use of the facilities, services, distribution channels, and employees of the Opioid Marketing Enterprise, the U.S. Mail and interstate wire facilities. The RICO Marketing Defendants participated in the scheme to defraud by using mail, telephones and the Internet to transmit mailings and wires in interstate or foreign commerce.

920. The RICO Marketing Defendants’ predicate acts of rackeering (18 U.S.C. § 1961(1)) include, but are not limited to:

- a. Mail Fraud: The RICO Marketing Defendants violated 18 U.S.C. § 1341 by sending or receiving, or by causing to be sent and/or received, materials via U.S. mail or commercial interstate carriers for the purpose of executing the unlawful scheme to design, manufacture, market, and sell the prescription opioids by means of false pretenses, misrepresentations, promises, and omissions.
- b. Wire Fraud: The RICO Marketing Defendants violated 18 U.S.C. § 1343 by transmitting and/or receiving, or by causing to be transmitted and/or received, materials by wire for the purpose of executing the unlawful scheme to design, manufacture, market, and sell the prescription opioids by means of false pretenses, misrepresentations, promises, and omissions.

921. Indeed, as summarized herein, the RICO Marketing Defendants used the mail and wires to send or receive thousands of communications, publications, representations, statements, electronic transmissions and payments to carry-out the Opioid Marketing Enterprise’s fraudulent scheme.

922. Because the RICO Marketing Defendants disguised their participation in the enterprise, and worked to keep even the enterprise’s existence secret so as to give the false appearance that their false messages reflected the views of independent third parties, many of the precise dates of the Opioid Marketing Enterprise’s uses of the U.S. Mail and interstate wire

facilities (and corresponding predicate acts of mail and wire fraud) have been hidden and cannot be alleged without access to the books and records maintained by the RICO Marketing Defendants, Front Groups, and KOLs. Indeed, an essential part of the successful operation of the Opioid Marketing Enterprise alleged herein depended upon secrecy. However, Plaintiff have described the occasions on which the RICO Marketing Defendants, Front Groups, and KOLs disseminated misrepresentations and false statements to Ohio consumers, prescribers, regulators and Plaintiff, and how those acts were in furtherance of the scheme.

923. Each instance of racketeering activity alleged herein was related, had similar purposes, involved the same or similar participants and methods of commission, and had similar results affecting similar victims, including Ohio consumers, prescribers, regulators and Plaintiff. The RICO Marketing Defendants, Front Groups and KOLs calculated and intentionally crafted the scheme and common purpose of the Opioid Marketing Enterprise to ensure their own profits remained high. In designing and implementing the scheme, the RICO Marketing Defendants understood and intended that those in the distribution chain rely on the integrity of the pharmaceutical companies and ostensibly neutral third parties to provide objective and scientific evidence regarding the RICO Marketing Defendants' products.

924. The RICO Marketing Defendants' pattern of racketeering activity alleged herein and the Opioid Marketing Enterprise are separate and distinct from each other. Likewise, the RICO Marketing Defendants are distinct from the Opioid Marketing Enterprise.

925. The pattern of racketeering activity alleged herein is continuing as of the date of this complaint, and, upon information and belief, will continue into the future unless enjoined by this Court.

926. The racketeering activities conducted by the RICO Marketing Defendants, Front Groups and KOLs amounted to a common course of conduct, with a similar pattern and purpose, intended to deceive Ohio consumers, prescribers, regulators and the Plaintiff. Each separate use of the U.S. Mail and/or interstate wire facilities employed by Defendants was related, had similar intended purposes, involved similar participants and methods of execution, and had the same results affecting the same victims, including Ohio consumers, prescribers, regulators and the Plaintiff. The RICO Marketing Defendants have engaged in the pattern of racketeering activity for the purpose of conducting the ongoing business affairs of the Opioid Marketing Enterprise.

927. Each of the RICO Marketing Defendants aided and abetted others in the violations of the above laws, thereby rendering them indictable as principals in the 18 U.S.C. §§ 1341 and 1343 offenses.

928. As described herein, the RICO Marketing Defendants engaged in a pattern of related and continuous predicate acts for years. The predicate acts constituted a variety of unlawful activities, each conducted with the common purpose of obtaining significant money and revenue from the marketing and sale of their highly addictive and dangerous drugs. The predicate acts also had the same or similar results, participants, victims, and methods of commission. The predicate acts were related and not isolated events.

929. The pattern of racketeering activity alleged herein is continuing as of the date of this Complaint and, upon information and belief, will continue into the future unless enjoined by this Court. The last racketeering incident occurred within five years of the commission of a prior incident of racketeering.

930. The RICO Marketing Defendants' violations of law and their pattern of racketeering activity directly and proximately caused Plaintiff injury in their business and

property. The RICO Marketing Defendants' pattern of racketeering activity logically, substantially and foreseeably caused an opioid epidemic. Plaintiff's injuries, as described below, were not unexpected, unforeseen or independent.³⁰¹ Rather, as Plaintiff alleges, the RICO Marketing Defendants knew that the opioids were unsuited to treatment of long-term chronic, non-acute, and non-cancer pain, or for any other use not approved by the FDA, and knew that opioids were highly addictive and subject to abuse.³⁰² Nevertheless, the RICO Marketing Defendants engaged in a scheme of deception that utilized the mail and wires in order to carry-out the Opioid Marketing Enterprises' fraudulent scheme, thereby increasing sales of their opioid products.

931. It was foreseeable and expected that the RICO Marketing Defendants creating and then participating in the Opioid Marketing Enterprise through a pattern of racketeering activities to carry-out their fraudulent scheme would lead to a nationwide opioid epidemic, including increased opioid addiction and overdose.³⁰³

932. Specifically, the RICO Marketing Defendants' creation of, and then participation in, the Opioid Marketing Enterprise through a pattern of racketeering activities to carry-out their fraudulent scheme has injured Plaintiff in the form of substantial losses of money and property that logically, directly and foreseeably arise from the opioid-addiction epidemic. Plaintiff's injuries, as alleged throughout this complaint, and expressly incorporated herein by reference, include:

³⁰¹ *Travelers Prop. Cas. Co. of Am. v. Actavis, Inc.*, 16 Cal. App. [5th 1026, 1030](#) (2017).

³⁰² *Id.* at 1041.

³⁰³ *Id.*

- a. Losses caused by the decrease in funding available for Plaintiff's public services for which funding was lost because it was diverted to other public services designed to address the opioid epidemic;
- b. Costs for providing healthcare and medical care, additional therapeutic, and prescription drug purchases, and other treatments for patients suffering from opioid-related addiction or disease, including overdoses and deaths;
- c. Costs of training emergency and/or first responders in the proper treatment of drug overdoses;
- d. Costs associated with providing police officers, firefighters, and emergency and/or first responders with naloxone—an opioid antagonist used to block the deadly effects of opioids in the context of overdose;
- e. Costs associated with emergency responses by police officers, firefighters, and emergency and/or first responders to opioid overdoses;
- f. Costs for providing mental-health services, treatment, counseling, rehabilitation services, and social services to victims of the opioid epidemic and their families;
- g. Costs for providing treatment of infants born with opioid-related medical conditions, or born dependent on opioids due to drug use by mother during pregnancy;
- h. Costs associated with law enforcement and public safety relating to the opioid epidemic, including but not limited to attempts to stop the flow of opioids into local communities, to arrest and prosecute street-level dealers, to prevent the current opioid epidemic from spreading and worsening, and to deal with the increased levels of crimes that have directly resulted from the increased homeless and drug-addicted population;
- i. Costs associated with increased burden on Plaintiff's judicial system, including increased security, increased staff, and the increased cost of adjudicating criminal matters due to the increase in crime directly resulting from opioid addiction;
- j. Costs associated with providing care for children whose parents suffer from opioid-related disability or incapacitation;
- k. Loss of tax revenue due to the decreased efficiency and size of the working population in Plaintiff's community;
- l. Costs associated with extensive clean-up of public parks, spaces, and facilities of needles and other debris and detritus of opioid addiction;

- m. Losses caused by diminished property values in neighborhoods where the opioid epidemic has taken root; and
- n. Losses caused by diminished property values in the form of decreased business investment and tax revenue.

933. Plaintiff's injuries were directly and thus proximately caused by these Defendants' racketeering activities because they were the logical, substantial and foreseeable cause of Plaintiff's injuries. But for the opioid-addiction epidemic the RICO Marketing Defendants created through their Opioid Marketing Enterprise, Plaintiff would not have lost money or property.

934. Plaintiff is the most directly harmed entity and there is no other Plaintiff better suited to seek a remedy for the economic harms at issue here.

935. Plaintiff seeks all legal and equitable relief as allowed by law, including, *inter alia*, actual damages; treble damages; equitable and/or injunctive relief in the form of court-supervised corrective communication, actions and programs; forfeiture as deemed proper by the Court; attorney's fees; all costs and expenses of suit; and pre- and post-judgment interest, including, *inter alia*:

- a. Actual damages and treble damages, including pre-suit and post-judgment interest;
- b. An order enjoining any further violations of RICO;
- c. An order enjoining any further violations of any statutes alleged to have been violated in this Complaint;
- d. An order enjoining the commission of any tortious conduct, as alleged in this Complaint;
- e. An order enjoining any future marketing or misrepresentations regarding the health benefits or risks of prescription opioids use, except as specifically approved by the FDA;
- f. An order enjoining any future marketing of opioids through non-branded marketing including through the Front Groups, KOLs, websites, or in any other

manner alleged in this Complaint that deviates from the manner or method in which such marketing has been approved by the FDA;

- g. An order enjoining any future marketing to vulnerable populations, including but not limited to, persons over the age of fifty-five, anyone under the age of twenty-one, and veterans;
- h. An order compelling the Defendants to make corrective advertising statements that shall be made in the form, manner and duration as determined by the Court, but not less than print advertisements in national and regional newspapers and medical journals, televised broadcast on major television networks, and displayed on their websites, concerning: (1) the risk of addiction among patients taking opioids for pain; (2) the ability to manage the risk of addiction; (3) pseudoaddiction is really addiction, not a sign of undertreated addiction; (4) withdrawal from opioids is not easily managed; (5) increasing opioid dosing presents significant risks, including addiction and overdose; (6) long term use of opioids has no demonstrated improvement of function; (8) use of time-released opioids does not prevent addiction; (9) abuse-deterrent formulations do not prevent opioid abuse; and (10) that manufacturers and distributors have duties under the CSA to monitor, identify, investigate, report and halt suspicious orders and diversion but failed to do so;
- i. An order enjoining any future lobbying or legislative efforts regarding the manufacturer, marketing, distribution, diversion, prescription, or use of opioids;
- j. An order requiring all Defendants to publicly disclose all documents, communications, records, data, information, research or studies concerning the health risks or benefits of opioid use;
- k. An order prohibiting all Defendants from entering into any new payment or sponsorship agreement with, or related to, any: Front Group, trade association, doctor, speaker, CME, or any other person, entity, or association, regarding the manufacturer, marketing, distribution, diversion, prescription, or use of opioids;
- l. An order establishing a National Foundation for education, research, publication, scholarship, and dissemination of information regarding the health risks of opioid use and abuse to be financed by the Defendants in an amount to be determined by the Court;
- m. An order enjoining any diversion of opioids or any failure to monitor, identify, investigate, report and halt suspicious orders or diversion of opioids;
- n. An order requiring all Defendants to publicly disclose all documents, communications, records, information, or data, regarding any prescriber, facility, pharmacy, clinic, hospital, manufacturer, distributor, person, entity or association regarding suspicious orders for or the diversion of opioids;

- o. An order divesting each Defendant of any interest in, and the proceeds of any interest in, the Marketing and Supply Chain Enterprises, including any interest in property associated with the Marketing and Supply Chain Enterprises;
- p. Dissolution and/or reorganization of any trade industry organization, Front Group, or any other entity or association associated with the Marketing and Supply Chain Enterprises identified in this Complaint, as the Court sees fit;
- q. Dissolution and/or reorganization of any Defendant named in this Complaint as the Court sees fit;
- r. Suspension and/or revocation of the license, registration, permit, or prior approval granted to any Defendant, entity, association or enterprise named in the Complaint regarding the manufacture or distribution of opioids;
- s. Forfeiture as deemed appropriate by the Court; and
- t. Attorneys' fees and all costs and expenses of suit.

SECOND CLAIM FOR RELIEF

**Violation of RICO, 18 U.S.C. § 1961 *et seq.* – Opioid Supply Chain Enterprise
(Against Defendants Purdue, Cephalon, Endo, Mallinckrodt, Actavis,
McKesson, Cardinal, and AmerisourceBergen – “RICO Supply Chain Defendants”)
(Brought by The County of Cuyahoga, the Plaintiff in this Count)**

936. Plaintiff repeats, re-alleges, and incorporates by reference each and every allegation set forth above as if fully set forth herein.

937. At all relevant times, the RICO Supply Chain Defendants were and are “persons” under 18 U.S.C. § 1961(3) because they are entities capable of holding, and do hold, “a legal or beneficial interest in property.”

938. The RICO Supply Chain Defendants together formed an association-in-fact enterprise, the Opioid Supply Chain Enterprise, for the purpose of increasing the quota for and profiting from the increased volume of opioid sales in the United States. The Opioid Supply Chain Enterprise is an association-in-fact enterprise within the meaning of § 1961. The Opioid Supply Chain Enterprise consists of the RICO Supply Chain Defendants.

939. The RICO Supply Chain Defendants were members of the Healthcare Distribution Alliance (the “HDA”).³⁰⁴ Each of the RICO Supply Chain Defendants is a member, participant, and/or sponsor of the HDA, and has been since at least 2006, and utilized the HDA to form the interpersonal relationships of the Opioid Supply Chain Enterprise and to assist them in engaging in the pattern of racketeering activity that gives rise to the Count.

940. At all relevant times, the Opioid Supply Chain Enterprise: (a) had an existence separate and distinct from each of the RICO Supply Chain Defendants; (b) was separate and distinct from the pattern of racketeering in which the RICO Supply Chain Defendants engaged; (c) was an ongoing and continuing organization consisting of legal entities, including each of the RICO Supply Chain Defendants; (d) was characterized by interpersonal relationships among the RICO Supply Chain Defendants; (e) had sufficient longevity for the enterprise to pursue its purpose; and (f) functioned as a continuing unit. Each member of the Opioid Supply Chain Enterprise participated in the conduct of the enterprise, including patterns of racketeering activity, and shared in the astounding growth of profits supplied by fraudulently inflating opioid quotas and resulting sales.

941. The RICO Supply Chain Defendants carried out, or attempted to carry out, a scheme to defraud federal and state regulators, and the American public by knowingly conducting or participating in the conduct of the Opioid Supply Chain Enterprise through a pattern of racketeering activity within the meaning of 18 U.S.C. § 1961(1) that employed the use of mail and wire facilities, in violation of 18 U.S.C. § 1341 (mail fraud) and § 1343 (wire fraud).

³⁰⁴ *History*, Health Distribution Alliance, <https://www.healthcaredistribution.org/about/hda-history>, (last accessed on September 15, 2017),

942. The RICO Supply Chain Defendants committed, conspired to commit, and/or aided and abetted in the commission of at least two predicate acts of racketeering activity (*i.e.* violations of 18 U.S.C. §§ 1341 and 1343) within the past ten years. The multiple acts of racketeering activity that the RICO Supply Chain Defendants committed, or aided and abetted in the commission of, were related to each other, posed a threat of continued racketeering activity, and therefore constitute a “pattern of racketeering activity.” The racketeering activity was made possible by the RICO Supply Chain Defendants’ regular use of the facilities, services, distribution channels, and employees of the Opioid Supply Chain Enterprise. The RICO Supply Chain Defendants participated in the scheme to defraud by using mail, telephone and the Internet to transmit mailings and wires in interstate or foreign commerce.

943. The RICO Supply Chain Defendants also conducted and participated in the conduct of the affairs of the Opioid Supply Chain Enterprise through a pattern of racketeering activity by the felonious manufacture, importation, receiving, concealment, buying, selling, or otherwise dealing in a controlled substance or listed chemical (as defined in section 102 of the Controlled Substance Act), punishable under any law of the United States.

944. The RICO Supply Chain Defendants committed crimes that are punishable as felonies under the laws of the United States. Specifically, 21 U.S.C. § 843(a)(4) makes it unlawful for any person to knowingly or intentionally furnish false or fraudulent information in, or omit any material information from, any application, report, record or other document required to be made, kept or filed under this subchapter. A violation of § 843(a)(4) is punishable by up to four years in jail, making it a felony. 21 U.S.C. § 843(d)(1).

945. Each of the RICO Supply Chain Defendants is a registrant as defined in the CSA. Their status as registrants under the CSA requires that they maintain effective controls against

diversion of controlled substances in schedule I or II, design and operate a system to disclose to the registrant suspicious orders of controlled substances and inform the DEA of suspicious orders when discovered by the registrant. 21 U.S.C. § 823; 21 C.F.R. § 1301.74(b).

946. The RICO Supply Chain Defendants' predicate acts of racketeering (18 U.S.C. § 1961(1)) include, but are not limited to:

- a. Mail Fraud: The RICO Supply Chain Defendants violated 18 U.S.C. § 1341 by sending or receiving, or by causing to be sent and/or received, materials via U.S. mail or commercial interstate carriers for the purpose of executing the unlawful scheme to design, manufacture, market, and sell the prescription opioids by means of false pretenses, misrepresentations, promises, and omissions.
- b. Wire Fraud: The RICO Supply Chain Defendants violated 18 U.S.C. § 1343 by transmitting and/or receiving, or by causing to be transmitted and/or received, materials by wire for the purpose of executing the unlawful scheme to design, manufacture, market, and sell the prescription opioids by means of false pretenses, misrepresentations, promises, and omissions.
- c. Controlled Substance Violations: The RICO Supply Chain Defendants who are Distributor Defendants violated 21 U.S.C. § 843 by knowingly or intentionally furnishing false or fraudulent information in, and/or omitting material information from, documents filed with the DEA.

947. The RICO Supply Chain Defendants conducted their pattern of racketeering activity in this jurisdiction and throughout the United States through this enterprise.

948. The RICO Supply Chain Defendants aided and abetted others in the violations of the above laws, thereby rendering them indictable as principals in the 18 U.S.C. §§ 1341 and 1343 offenses.

949. The RICO Supply Chain Defendants hid from the general public and suppressed and/or ignored warnings from third parties, whistleblowers and governmental entities about the reality of the suspicious orders that the RICO Supply Chain Defendants were filling on a daily

basis – leading to the diversion of hundreds of millions of doses of prescriptions opioids into the illicit market.

950. The RICO Supply Chain Defendants, with knowledge and intent, agreed to the overall objective of their fraudulent scheme and participated in the common course of conduct to commit acts of fraud and indecency in manufacturing and distributing prescription opioids.

951. Indeed, for the Defendants' fraudulent scheme to work, each of the Defendants had to agree to implement similar tactics regarding manufacturing prescription opioids and refusing to report suspicious orders.

952. As described herein, the RICO Supply Chain Defendants engaged in a pattern of related and continuous predicate acts for years. The predicate acts constituted a variety of unlawful activities, each conducted with the common purpose of obtaining significant monies and revenues from the sale of their highly addictive and dangerous drugs. The predicate acts also had the same or similar results, participants, victims, and methods of commission. The predicate acts were related and not isolated events.

953. The predicate acts all had the purpose of creating the opioid epidemic that substantially injured Plaintiff's business and property, while simultaneously generating billion-dollar revenue and profits for the RICO Supply Chain Defendants. The predicate acts were committed or caused to be committed by the RICO Supply Chain Defendants through their participation in the Opioid Supply Chain Enterprise and in furtherance of its fraudulent scheme.

954. The pattern of racketeering activity alleged herein and the Opioid Supply Chain Enterprise are separate and distinct from each other. Likewise, the RICO Supply Chain Defendants are distinct from the enterprise.

955. The pattern of racketeering activity alleged herein is continuing as of the date of this Complaint and, upon information and belief, will continue into the future unless enjoined by this Court.

956. Many of the precise dates of the RICO Supply Chain Defendants' criminal actions at issue here have been hidden by Defendants and cannot be alleged without access to Defendants' books and records. Indeed, an essential part of the successful operation of the Opioid Supply Chain Enterprise alleged herein depended upon secrecy.

957. By intentionally refusing to report and halt suspicious orders of their prescription opioids, Defendants engaged in a fraudulent scheme and unlawful course of conduct constituting a pattern of racketeering activity.

958. It was foreseeable to the RICO Supply Chain Defendants that Plaintiff would be harmed when they refused to report and halt suspicious orders, because their violation of the duties imposed by the CSA and Code of Federal Regulations allowed the widespread diversion of prescription opioids out of appropriate medical channels and into the illicit drug market – causing the opioid epidemic that the CSA intended to prevent.

959. The last racketeering incident occurred within five years of the commission of a prior incident of racketeering.

960. The RICO Supply Chain Defendants' violations of law and their pattern of racketeering activity directly and proximately caused Plaintiff injury in its business and property. The RICO Supply Chain Defendants' pattern of racketeering activity, including their refusal to identify, report and halt suspicious orders of controlled substances, logically, substantially and foreseeably cause an opioid epidemic. Plaintiff was injured by the RICO Supply Chain Defendants' pattern of racketeering activity and the opioid epidemic that they created.

961. The RICO Supply Chain Defendants knew that the opioids they manufactured and supplied were unsuited to treatment of long-term, chronic, non-acute, and non-cancer pain, or for any other use not approved by the FDA, and knew that opioids were highly addictive and subject to abuse.³⁰⁵ Nevertheless, the RICO Supply Chain Defendants engaged in a scheme of deception, that utilized the mail and wires as part of their fraud, in order to increase sales of their opioid products by refusing to identify, report suspicious orders of prescription opioids that they knew were highly addictive, subject to abuse, and were actually being diverted into the illegal market.³⁰⁶

962. The RICO Supply Chain Defendants' predicate acts and pattern of racketeering activity were a cause of the opioid epidemic which has injured Plaintiff in the form of substantial losses of money and property that logically, directly and foreseeably arise from the opioid-addiction epidemic.

963. Specifically, Plaintiff's injuries, as alleged throughout this complaint, and expressly incorporated herein by reference, include:

- a. Losses caused by the decrease in funding available for Plaintiff's public services for which funding was lost because it was diverted to other public services designed to address the opioid epidemic;
- b. Costs for providing healthcare and medical care, additional therapeutic, and prescription drug purchases, and other treatments for patients suffering from opioid-related addiction or disease, including overdoses and deaths;
- c. Costs of training emergency and/or first responders in the proper treatment of drug overdoses;

³⁰⁵ *Travelers Prop. Cas. Co. of Am. v. Actavis, Inc.*, 16 Cal. App. [5th 1026, 1030](#) (2017).

³⁰⁶ *City of Everett v. Purdue Pharma L.P.*, [Case No. 17-cv-00209](#), 2017 WL 4236062, *2 (W.D. Wash. Sept. 25, 2017).

- d. Costs associated with providing police officers, firefighters, and emergency and/or first responders with naloxone – an opioid antagonist used to block the deadly effects of opioids in the context of overdose;
- e. Costs associated with emergency responses by police officers, firefighters, and emergency and/or first responders to opioid overdoses;
- f. Costs for providing mental-health services, treatment, counseling, rehabilitation services, and social services to victims of the opioid epidemic and their families;
- g. Costs for providing treatment of infants born with opioid-related medical conditions, or born dependent on opioids due to drug use by mother during pregnancy;
- h. Costs associated with law enforcement and public safety relating to the opioid epidemic, including but not limited to attempts to stop the flow of opioids into local communities, to arrest and prosecute street-level dealers, to prevent the current opioid epidemic from spreading and worsening, and to deal with the increased levels of crimes that have directly resulted from the increased homeless and drug-addicted population;
- i. Costs associated with increased burden on Plaintiff's judicial system, including increased security, increased staff, and the increased cost of adjudicating criminal matters due to the increase in crime directly resulting from opioid addiction;
- j. Costs associated with providing care for children whose parents suffer from opioid-related disability or incapacitation;
- k. Loss of tax revenue due to the decreased efficiency and size of the working population in Plaintiff's community;
- l. Losses caused by diminished property values in neighborhoods where the opioid epidemic has taken root; and
- m. Losses caused by diminished property values in the form of decreased business investment and tax revenue.

964. Plaintiff's injuries were proximately caused by Defendants' racketeering activities because they were the logical, substantial and foreseeable cause of Plaintiff's injuries. But for the opioid-addiction epidemic created by Defendants' conduct, Plaintiff would not have lost money or property.

965. Plaintiff's injuries were directly caused by the RICO Supply Chain Defendants' pattern of racketeering activities.

966. Plaintiff is most directly harmed and there is no other Plaintiff better suited to seek a remedy for the economic harms at issue here.

967. Plaintiff seeks all legal and equitable relief as allowed by law, including, *inter alia*, actual damages; treble damages; equitable and/or injunctive relief in the form of court-supervised corrective communication, actions and programs; forfeiture as deemed proper by the Court; attorney's fees; all costs and expenses of suit; and pre- and post-judgment interest, and all of the relief sought into the First Claim for Relief, as the Court deems just and applicable.

THIRD CLAIM FOR RELIEF

**Violation Of The Ohio Corrupt Practices Act
Ohio Revised Code §§ 2923.31, *et seq.*
(Against Purdue, Cephalon, Janssen, Endo, and Mallinckrodt)
(the "Opioid Marketing Enterprise")
(Brought by The County of Cuyahoga, the Plaintiff in this Count)**

968. Plaintiff incorporates by reference all other paragraphs of this Complaint as if fully set forth herein, and further alleges as follows.

969. Plaintiff brings this Claim against Defendants Purdue, Cephalon, Janssen, Endo, and Mallinckrodt (referred to collectively for this Claim as the "the RICO Marketing Defendants"), each of whom is a "person" within the meaning of Ohio Revised Code Section 2923.31(G).

A. The Opioid Marketing Enterprise and Pattern of Corrupt Activity.

970. For efficiency and to avoid repetition, for purposes of this claim, Plaintiff incorporates by reference the paragraphs of Plaintiff's First Claim for Relief concerning the Opioid Marketing Enterprise.

971. As alleged above, each of the RICO Marketing Defendants were members of an association-in-fact enterprise, the Opioid Marketing Enterprise, within the meaning of Ohio Rev. Code Ann. § 2923.31(C).

972. As alleged above, each of the RICO Marketing Defendants conducted and participated in the conduct of the affairs of the Opioid Marketing Enterprise through a pattern of “corrupt activities”, as defined in Ohio Rev. Code Ann. § 2923.31(1) and (2).

973. As previously alleged, the RICO Marketing Defendants engaged in a pattern of corrupt activity by committing mail fraud (18 U.S.C. § 1341) and wire fraud (18 U.S.C. § 1343). The RICO Marketing Defendants acts also constitute a pattern of telecommunications fraud (Ohio Rev. Code Ann. § 2913.05). The RICO Marketing Defendants formed an association-in-fact enterprise consisting of “advocacy groups and professional societies” (“Front Groups”) and paid “physicians affiliated with these groups” (KOLs”) in order to unlawfully increase the demand for opioids. Through their personal relationships, the RICO Marketing Defendants and members of the Opioid Marketing Enterprise had the opportunity to form and take actions in furtherance of the Opioid Marketing Enterprise’s common purpose. The RICO Marketing Defendants’ substantial financial contribution to the Opioid Marketing Enterprise, and the advancement of opioids-friendly messaging, fueled the U.S. opioids epidemic.³⁰⁷

974. The RICO Marketing Defendants, through the Opioid Marketing Enterprise, made misleading statements and misrepresentations about opioids that downplayed the risk of addiction and exaggerated the benefits of opioid use, including: (1) that addiction is rare among patients taking opioids for pain; (2) that addiction risk can be effectively managed; (3) that symptoms of addiction exhibited by opioid patients are actually symptoms of an invented

³⁰⁷ *Fueling an Epidemic* [supra note 132](#), at 1.

condition the RICO Marketing Defendants named “pseudoaddiction”; (4) that withdrawal is easily managed; (5) that increased dosing presents no significant risks; (6) that long-term use of opioids improves function; (7) that the risks of alternative forms of pain treatment are greater than the adverse effects of opioids; (8) that use of time-released dosing prevents addiction; and (9) that abuse-deterrent formulations provide a solution to opioid abuse.

B. Injury Caused and Relief Sought

975. The RICO Marketing Defendants’ violations of law and their pattern of racketeering activity directly or indirectly caused Plaintiff’s injury. The RICO Marketing Defendants’ pattern of racketeering activity logically, substantially and foreseeably caused an opioid epidemic. Plaintiff’s injuries, as described below, were not unexpected, unforeseen or independent. Rather, as Plaintiff alleges, the RICO Marketing Defendants knew that the opioids were unsuited to treatment of long-term chronic, non-acute, and non-cancer pain, or for any other use not approved by the FDA, and knew that opioids were highly addictive and subject to abuse. Nevertheless, the RICO Marketing Defendants engaged in a scheme of deception, that utilized the mail and wires as part of their fraud, in order to increase sales of their opioid products.

976. It was foreseeable and expected that a massive marketing campaign utilized by the RICO Marketing Defendants that misrepresented the non-addictive and effective use of prescription opioids for purposes for which they are not suited and not approved by the FDA would lead to a nationwide opioid epidemic. It was also foreseeable and expected that the RICO Marketing Defendants’ marketing campaign would lead to increased opioid addiction and overdose. Plaintiff’s injuries were logically, foreseeable, and substantially caused by the opioid epidemic that the RICO Marketing Defendants created.

977. Specifically, the RICO Marketing Defendants’ predicate acts and pattern of racketeering activity caused the opioid epidemic which has injured Plaintiff in the form of

substantial losses of money and property that logically, directly and foreseeably arise from the opioid-addiction epidemic. Plaintiff's injuries, as alleged throughout this complaint, and expressly incorporated herein by reference, include:

- a. Losses caused by the decrease in funding available for Plaintiff's public services for which funding was lost because it was diverted to other public services designed to address the opioid epidemic;
- b. Costs for providing healthcare and medical care, additional therapeutic, and prescription drug purchases, and other treatments for patients suffering from opioid-related addiction or disease, including overdoses and deaths;
- c. Costs of training emergency and/or first responders in the proper treatment of drug overdoses;
- d. Costs associated with providing police officers, firefighters, and emergency and/or first responders with naloxone – an opioid antagonist used to block the deadly effects of opioids in the context of overdose;
- e. Costs associated with emergency responses by police officers, firefighters, and emergency and/or first responders to opioid overdoses;
- f. Costs for providing mental-health services, treatment, counseling, rehabilitation services, and social services to victims of the opioid epidemic and their families;
- g. Costs for providing treatment of infants born with opioid-related medical conditions, or born dependent on opioids due to drug use by mother during pregnancy;
- h. Costs associated with law enforcement and public safety relating to the opioid epidemic, including but not limited to attempts to stop the flow of opioids into local communities, to arrest and prosecute street-level dealers, to prevent the current opioid epidemic from spreading and worsening, and to deal with the increased levels of crimes that have directly resulted from the increased homeless and drug-addicted population;
- i. Costs associated with increased burden on Plaintiff's judicial system, including increased security, increased staff, and the increased cost of adjudicating criminal matters due to the increase in crime directly resulting from opioid addiction;
- j. Costs associated with providing care for children whose parents suffer from opioid-related disability or incapacitation;

- k. Costs associated with extensive clean-up of public parks, spaces and facilities of needles and other debris and detritus of opioid addiction;
- l. Loss of tax revenue due to the decreased efficiency and size of the working population in Plaintiff's community;
- m. Losses caused by diminished property values in neighborhoods where the opioid epidemic has taken root; and
- n. Losses caused by diminished property values in the form of decreased business investment and tax revenue.

978. Plaintiff seeks all legal and equitable relief as allowed by law, including, *inter alia*, actual damages; treble damages; equitable and/or injunctive relief, including corrective statements, information and education, under Ohio Rev. Code § 2923.34(B)(1)-(2), requiring divestiture by, and reasonable restrictions upon, the future activities of the Defendants; forfeiture as deemed proper by the Court; attorney's fees and all costs; expenses of suit; and pre- and post-judgment interest, and all of the relief sought into the First Claim for Relief, as the Court deems just and applicable.

FOURTH CLAIM FOR RELIEF

**Violation Of The Ohio Corrupt Practices Act
Ohio Revised Code §§ 2923.31, *et seq.*
Against Defendants Purdue, Janssen, Cephalon, Endo, Mallinckrodt, Actavis,
McKesson, Cardinal, and AmerisourceBergen)
(The "Opioid Supply Chain Enterprise")
(Brought by The County of Cuyahoga, the Plaintiff in this Count)**

979. Plaintiff incorporates by reference all other paragraphs of this Complaint as if fully set forth herein, and further alleges as follows.

980. Plaintiff brings this Claim against Defendants Purdue, Janssen, Cephalon, Endo, Mallinckrodt, Actavis (the "RICO Marketing Defendants"), and Defendants McKesson, Cardinal, and AmerisourceBergen (the "Distributor Defendants") (together with the RICO

Marketing Defendants, the “RICO Supply Chain Defendants”), each of whom is a “person” within the meaning of Ohio Rev. Code Ann. § 2923.31(G).

A. The Opioid Supply Chain Enterprise and Pattern of Corrupt Activity

981. For efficiency and to avoid repetition, for purposes of this claim, Plaintiff incorporates by reference the paragraphs of Plaintiff’s Second Claim for Relief concerning the Opioid Supply Chain Enterprise.

982. As previously alleged, each of the RICO Supply Chain Defendants were members of an association-in-fact enterprise, the Opioid Supply Chain Enterprise, within the meaning of Ohio Rev. Code Ann. § 2923.31(C).

983. As previously alleged, each of the RICO Supply Chain Defendants conducted and participated in the conduct of the affairs of this Enterprise through a pattern of “corrupt activities” as defined in Ohio Rev. Code Ann. § 2923.31(I)(1) and (2).

984. As previously alleged, the RICO Supply Chain Defendants engaged in a pattern of corrupt activities defined as “racketeering activities” in 18 U.S.C. § 1961(1)(B) and (D), including mail fraud (18 U.S.C. § 1341), wire fraud (18 U.S.C. § 1343), and dealing in a controlled substance which crime is punishable under any law of the United States. The RICO Supply Chain Defendants acts also constitute a pattern of telecommunications fraud (Ohio Rev. Code Ann. § 2913.05).

985. For over a decade, the RICO Supply Chain Defendants aggressively sought to bolster their revenue, increase profit, and grow their share of the prescription painkiller market by unlawfully and surreptitiously increasing the volume of opioids they sold. However, the RICO Supply Chain Defendants are not permitted to engage in a limitless expansion of their sales through the unlawful sales of regulated painkillers. As “registrants” under the Controlled Substances Act, 21 U.S.C. § 821, *et seq.* (the “CSA”), the RICO Supply Chain Defendants

operated and continue to operate within a “closed-system.” The CSA restricts the RICO Supply Chain Defendants’ ability to manufacture or distribute Schedule II substances like opioids by:

- (1) requiring them to make sales within a limited quota set by the DEA for the overall production of Schedule II substances like opioids;
- (2) register to manufacture or distribute opioids;
- (3) maintain effective controls against diversion of the controlled substances that they manufacturer or distribute; and
- (4) design and operate a system to identify suspicious orders of controlled substances, halt such unlawful sales, and report them to the DEA.

986. As alleged above, Congress created a closed system when it enacted the CSA, including the establishment of quota system, with the specific intent to protect public safety by reducing or eliminating the diversion of Schedule II drugs, like opioids, from legitimate channels of trade to illicit markets “by controlling the basic ingredients needed for the manufacture of [controlled substances.]”³⁰⁸

987. Each of the RICO Supply Chain Defendants knows and has known for decades that if it does not report, investigate or halt suspicious orders, the likelihood of the DEA learning of these illicit transactions and diversions in a timely manner, or at all, is greatly reduced and, therefore, [REDACTED] is likely to contribute to the increase and maintenance of artificially high quotas.

988. Each of the Marketing and Distributor Defendants also knows, and has known for decades, that the quotas for its opioid products will decrease or increase as the number of licit prescriptions decrease or increase.

³⁰⁸ 1970 U.S.C.C.A.N. 4566 at 5490; *see also* Testimony of Joseph T. Rannazzisi before the Caucus on International Narcotics Control, United States Senate, May 5, 2015 (available at https://www.drugcaucus.senate.gov/sites/default/files/Rannazzisi%20Testimony_0.pdf).

989. Therefore, finding it impossible to legally achieve their ever-increasing sales ambitions, members of the Opioid Supply Chain Enterprise engaged in the common purpose of fraudulently increasing the quotas that governed the manufacture and distribution of their prescription opioids. The RICO Supply Chain Defendants formed and pursued their common purpose through the many personal interactions that they had, confidentially, in organizations like the Pain Care Forum and the Healthcare Distribution Alliance.

990. The RICO Supply Chain Defendants' common purpose and fraudulent scheme to unlawfully increase the DEA quotas violated the Corrupt Practices Act in three ways. First, the RICO Supply Chain Defendants violated the Corrupt Practices Act because they engaged in the felonious manufacture, buying selling, or otherwise dealing in controlled substances that are punishable by law in the United States. Specifically, the RICO Supply Chain Defendants engaged in the manufacture, buying, selling, or otherwise dealing in controlled substances in violation of 21 U.S.C. § 843 because they furnished false or fraudulent material information in, and omitted material information from, applications, reports, records, and other document they were required to make, keep, or file under required to be made, kept, or filed under this subchapter or subchapter II of 21 U.S.C. 801, *et seq.*

991. Second, the RICO Supply Chain Defendants violated the Corrupt Practices Act by engaging in mail and wire fraud. The RICO Supply Chain Defendants' common purpose and fraudulent scheme was intended to, and did, utilize interstate mail and wire facilities for the commission of their fraud in violation 18 U.S.C. §§ 1341 (mail fraud) and 1343 (wire fraud).

992. Third, the RICO Supply Chain Defendants violated the Corrupt Practices Act by engaging in telecommunications fraud. The RICO Supply Chain Defendants' common purpose and fraudulent scheme was intended to, and did disseminate or transmit writings, data, signs,

signals, pictures, sounds or images by means of wire, radio, satellite, telecommunication, telecommunications devices or services in furtherance of the scheme to defraud.

993. The RICO Supply Chain Defendants' fraudulent scheme arises at the intersection between the quotas governing the RICO Supply Chain Defendants' prescription opioids and the RICO Supply Chain Defendants' duty to identify, report, and halt suspicious orders of controlled substances. The RICO Supply Chain Defendants' formed an enterprise with the intent to fraudulently increase the quotas for prescription opioids by refusing to identify, report and halt suspicious orders, thereby omitting both the fact and the RICO Supply Chain Defendants' knowledge of widespread diversion of prescription opioids into illegitimate channels.

994. The RICO Supply Chain Defendants engaged in systematic and fraudulent acts as part of the Opioid Supply Chain Enterprise, that furnished false or fraudulent material information in, and omitted material information from their applications, reports, records and other documents that the RICO Supply Chain Defendants were required to make, keep and/or file. Furthermore, the RICO Supply Chain Defendants engaged in systematic and fraudulent acts as part of the Opioid Distribution Enterprise that were intended to and actually did utilize the mail and wire facilities of the United States and Ohio, including refusing to maintain effective controls against diversion of their drugs, to design and operate a system to identify suspicious orders of their drugs, to halt unlawful sales of suspicious orders, and to notify the DEA of suspicious orders.³⁰⁹

995. Through the RICO Supply Chain Defendants' scheme, members of the Opioid Supply Chain Enterprise repeatedly requested increases of the quotas governing the manufacture, sale and distribution of prescription opioids, misrepresented that they were complying with their

³⁰⁹ 21 U.S.C. § 823(a)(1), (b)(1); 21 C.F.R. § 1301.74(b)-(c).

duties under the CSA, furnished false or fraudulent material information in, and omitted material information from their applications, reports, records and other documents, engaged in unlawful sales of opioids that resulted in diversion of controlled substances through suspicious orders, and refused to identify or report suspicious orders of controlled substances sales to the DEA.³¹⁰

Defendants' refusal to report suspicious orders resulted in artificial and illegal increases in the annual production quotas for opioids allowed by the DEA. The end result of the RICO Supply Chain Defendants' fraudulent scheme and common purpose was continually increasing quotas that generated obscene profits and, in turn, fueled an opioid epidemic.

996. In particular, each of the RICO Supply Chain Defendants were associated with, and conducted or participated in, the affairs of the Opioid Supply Chain Enterprise, whose common purpose was fraudulently increase the quotas governing the manufacture and sale of prescription opioids.

997. The success of the RICO Supply Chain Defendants' scheme allowed them to unlawfully increase and/or maintain high production quotas and, as a direct result, allowed them to make billions from the unlawful sale and diversion of opioids.

B. Impact of The Opioid Supply Chain Enterprise

998. The factual allegations and tragic statistics of injury and damage set forth in Sections I.G-I.H apply equally here.

C. Injury Caused and Relief Sought

999. The RICO Supply Chain Defendants' violations of law and their pattern of racketeering activity directly and indirectly caused Plaintiff's injury. Their pattern of corrupt activity logically, substantially and foreseeably caused an opioid epidemic. Plaintiff's injuries,

³¹⁰ 21 C.F.R. § 1303.11(b); 21 C.F.R. § 1303.23.

as described below, were not unexpected, unforeseen or independent. Rather, as Plaintiff alleges, Defendants knew that the opioids were going to fuel an ever-increasing illicit prescription market, as well as increasing addiction and death as a result of licit prescriptions of opioids to treat chronic, long-term pain.

1000. It was foreseeable and expected that flooding the illegal market for opioids would lead to a nationwide opioid epidemic. It was also foreseeable and expected that it would lead to increased opioid addiction and overdose. Plaintiff's injury was logically, foreseeable, and substantially caused by the opioid epidemic that the RICO Supply Chain Defendants created.

1001. Specifically, the RICO Supply Chain Defendants' pattern of corrupt activity caused the opioid epidemic which has injured Plaintiff in the form of substantial losses of money and property that logically, directly and foreseeably arise from the opioid-addiction epidemic. Plaintiff's injuries, as alleged throughout this complaint, and expressly incorporated herein by reference, include:

- a. Losses caused by the decrease in funding available for Plaintiff's public services for which funding was lost because it was diverted to other public services designed to address the opioid epidemic;
- b. Costs for providing healthcare and medical care, additional therapeutic, and prescription drug purchases, and other treatments for patients suffering from opioid-related addiction or disease, including overdoses and deaths;
- c. Costs of training emergency and/or first responders in the proper treatment of drug overdoses;
- d. Costs associated with providing police officers, firefighters, and emergency and/or first responders with naloxone – an opioid antagonist used to block the deadly effects of opioids in the context of overdose;
- e. Costs associated with emergency responses by police officers, firefighters, and emergency and/or first responders to opioid overdoses;

- f. Costs for providing mental-health services, treatment, counseling, rehabilitation services, and social services to victims of the opioid epidemic and their families;
- g. Costs for providing treatment of infants born with opioid-related medical conditions, or born dependent on opioids due to drug use by mother during pregnancy;
- h. Costs associated with law enforcement and public safety relating to the opioid epidemic, including but not limited to attempts to stop the flow of opioids into local communities, to arrest and prosecute street-level dealers, to prevent the current opioid epidemic from spreading and worsening, and to deal with the increased levels of crimes that have directly resulted from the increased homeless and drug-addicted population;
- i. Costs associated with increased burden on Plaintiff's judicial system, including increased security, increased staff, and the increased cost of adjudicating criminal matters due to the increase in crime directly resulting from opioid addiction;
- j. Costs associated with providing care for children whose parents suffer from opioid-related disability or incapacitation;
- k. Costs associated with extensive clean-up of public parks, spaces and facilities of needles and other debris and detritus of opioid addiction;
- l. Loss of tax revenue due to the decreased efficiency and size of the working population in Plaintiff's community;
- m. Losses caused by diminished property values in neighborhoods where the opioid epidemic has taken root; and
- n. Losses caused by diminished property values in the form of decreased business investment and tax revenue.

1002. Plaintiff seeks all legal and equitable relief as allowed by law, including, *inter alia*, actual damages, treble damages, equitable and/or injunctive relief, including corrective statements, information and education, under Ohio Rev. Code § 2923.34(B)(1)-(2), requiring divestiture by, and reasonable restrictions upon, the future activities of the Defendants, forfeiture as deemed proper by the Court, attorney's fees and all costs, and expenses of suit, and pre- and post-judgment interest, and all of the relief sought into the First Claim for Relief, as the Court deems just and applicable.

FIFTH CLAIM FOR RELIEF

**Statutory Public Nuisance
(Against All Defendants)**

**(Brought by the County of Cuyahoga and The State of Ohio ex rel. Michael C. O'Malley,
the County Prosecutor of Cuyahoga County, *each as the Plaintiff in this Count*)**

1003. Plaintiff incorporates by reference all other paragraphs of this Complaint as if fully set forth herein, and further alleges:

1004. The Prosecuting Attorney for Cuyahoga County, Michael C. O'Malley, brings this claim in the name of the State of Ohio pursuant to the statutory authority granted under R.C. § 3767.03, to abate a public nuisance and to enjoin further maintenance of the nuisance. R.C. § 3767.03 provides: "Whenever a nuisance exists the attorney general; the village solicitor, city director of law, or other similar chief legal officer of the municipal corporation in which the nuisance exists; the prosecuting attorney of the county in which the nuisance exists; the law director of a township that has adopted a limited home rule government under Chapter 504. of the Revised Code; or any person who is a citizen of the county in which the nuisance exists may bring an action in equity in the name of the state, upon the relation of the attorney general; the village solicitor, city director of law, or other similar chief legal officer of the municipal corporation; the prosecuting attorney; the township law director; or the person, to abate the nuisance and to perpetually enjoin the person maintaining the nuisance from further maintaining it."

1005. The Prosecuting Attorney for Cuyahoga County also brings this claim in the name of the State of Ohio pursuant to the statutory authority granted under O.R.C. § 4729.35 to enjoin a violation of that statute.

1006. Ohio statutory law provides that “[a]s used in all sections of the Revised Code relating to nuisances . . . (C) “Nuisance” means any of the following: . . . (1) [t]hat which is defined and declared by statutes to be a nuisance” R.C. § 3767.01

1007. Ohio statutory law “declare[s] to be inimical, harmful, and adverse to the public welfare of the citizens of Ohio and to constitute a public nuisance” “[t]he violation by a pharmacist or other person of any laws of Ohio or of the United States of America or of any rule of the board of pharmacy controlling the distribution of a drug of abuse as defined in section 3719.011 of the Revised Code” R.C. § 4729.35.

1008. Opioids are “a drug of abuse” as defined in R.C. § 3719.011.

1009. Under R.C. § 3767.02, “Any person, who uses, occupies, establishes, or conducts a nuisance, or aids or abets in the use, occupancy, establishment, or conduct of a nuisance; the owner, agent, or lessee of an interest in any such nuisance; any person who is employed in that nuisance by that owner, agent, or lessee; and any person who is in control of that nuisance is guilty of maintaining a nuisance and shall be enjoined as provided in sections 3767.03 to 3767.11 of the Revised Code.”

1010. Defendants are persons who have established or conducted a nuisance, who have aided or abetted in the establishment or conduct of a nuisance, and/or who are in control of a nuisance and guilty of maintaining a nuisance; as defined in R.C. § 3767.02.

1011. Defendants are persons who have violated, and/or who have aided and abetted the violation of the laws of Ohio or of the United States of America or of any rule of the board of pharmacy controlling the distribution of a drug of abuse as defined in R.C. § 3719.011.

1012. In the distribution and sale of opioids in Plaintiff’s community, Defendants violated and/or aided and abetted the violation of Ohio law, including, but not limited to, [REDACTED]

[REDACTED], O.A.C. §§ 4729-9-12, 4729-9-16, 4729-9-28, and federal law, including, but not limited to, 21 U.S.C. § 823 and 21 CFR § 1301.74.

1013. Defendants' unlawful conduct includes violating and/or aiding and abetting the violation of federal and Ohio statutes and regulations, including the controlled substances laws, by, *inter alia*:

- a. Distributing by distributors and selling by manufacturers of opioids in ways that facilitated and encouraged their flow into the illegal, secondary market;
- b. Distributing by distributors and selling by manufacturers of opioids without maintaining effective controls against the diversion of opioids;
- e. [REDACTED];
- d. [REDACTED]
- e. [REDACTED]
- f. Choosing not to stop or suspend shipments of suspicious orders; and
- g. Distributing by distributors and selling by manufacturers of opioids prescribed by "pill mills" when Defendants knew or should have known the opioids were being prescribed by "pill mills."

1014. In the distribution and sale of opioids in Ohio and Plaintiff's Community, Defendants violated and/or aided and abetted violations of R.C. § 2925.02(A), which states:

"No person shall knowingly do any of the following:

- (1) By force, threat, or deception, administer to another or induce or cause another to use a controlled substance; . . . or
- (3) By any means, administer or furnish to another or induce or cause another to use a controlled substance, and thereby cause serious physical harm to the other person, or cause the other person to become drug dependent."

1015. The exemption in R.C. § 2925.02 only applies to drug manufacturers and wholesalers when their "conduct is in accordance with Chapters RC 3719., 4715., 4723., 4729.,

4730., 4731., and 4741.” R.C. § 2925.02(B). Defendants are not in compliance with said Chapters and have thereby forfeited the protection provided by the exception.

1016. Defendants’ conduct entails a pervasive pattern and practice of violating the statutes and regulations set forth above. Defendants’ systemic failure to adhere to Ohio and federal controlled substances statutes and regulations has created an ongoing, significant, unlawful, and unreasonable interference with the public health, welfare, safety, peace, comfort, and convenience of Plaintiff and Plaintiff’s Community.

1017. Defendants had control over their conduct in Plaintiff’s Community and that conduct has had an adverse effect on the public right. Marketing Defendants controlled their deceptive advertising and efforts to mislead the public, including their acts and omissions in detailing by their sales representatives, online communications, publications, Continuing Medical Education programs and other speaking events, and other means described in this Complaint. Defendants had control over their own shipments of opioids and over their reporting, or lack thereof, of suspicious prescribers and orders. Each of the Defendants controlled the systems they developed to prevent diversion, and whether they filled orders they knew or should have known were likely to be diverted or fuel an illegal market.

1018. The nuisance created by Defendants’ conduct is abatable.

1019. Defendants’ misconduct alleged in this case is ongoing and persistent.

1020. Defendants’ misconduct alleged in this case does not concern a discrete event or discrete emergency of the sort a political subdivision would reasonably expect to occur, and is not part of the normal and expected costs of a local government’s existence. Plaintiff alleges wrongful acts which are neither discrete nor of the sort a local government can reasonably expect.

1021. Plaintiff has incurred expenditures for special programs over and above Plaintiff's ordinary public services.

1022. The unlawful conduct of each Defendant was a substantial factor in producing harm to Plaintiff.

1023. Plaintiff seeks abatement, recovery of abatement costs, injunctive relief, and to prevent injury and annoyance from any nuisance.

1024. Plaintiff seeks all other legal and equitable relief as allowed by law.

SIXTH CLAIM FOR RELIEF

Common Law Absolute Public Nuisance (Against All Defendants)

(Brought by The County of Cuyahoga, the Plaintiff in this Count)

1025. Plaintiff incorporates by reference all other paragraphs of this Complaint as if fully set forth herein unless inconsistent with the allegations in this Count, and further alleges:

1026. Defendants created and maintained a public nuisance which proximately caused injury to Plaintiff.

1027. A public nuisance is an unreasonable interference with a right common to the general public.

1028. Defendants have created and maintained a public nuisance by marketing, distributing, and selling opioids in ways that unreasonably interfere with the public health, welfare, and safety in Plaintiff's Community, and Plaintiff and the residents of Plaintiff's Community have a common right to be free from such conduct and to be free from conduct that creates a disturbance and reasonable apprehension of danger to person and property.

1029. The public nuisance is an *absolute* public nuisance because Defendants' nuisance-creating conduct was intentional and unreasonable and/or violated statutes which established specific legal requirements for the protection of others.

1030. Defendants have created and maintained an absolute public nuisance through their ongoing conduct of marketing, distributing, and selling opioids, which are dangerously addictive drugs, in a manner which caused prescriptions and sales of opioids to skyrocket in Plaintiff's Community, flooded Plaintiff's Community with opioids, and facilitated and encouraged the flow and diversion of opioids into an illegal, secondary market, resulting in devastating consequences to Plaintiff and the residents of Plaintiff's Community.

1031. Defendants know, and have known, that their intentional, unreasonable, and unlawful conduct will cause, and has caused, opioids to be used and possessed illegally and that their conduct has produced an ongoing nuisance that has had, and will continue to have, a detrimental effect upon the public health, welfare, safety, peace, comfort, and convenience of Plaintiff and Plaintiff's Community.

1032. Defendants' conduct has created an ongoing, significant, unlawful, and unreasonable interference with rights common to the general public, including the public health, welfare, safety, peace, comfort, and convenience of Plaintiff and Plaintiff's Community. *See* Restatement (Second) of Torts § 821B.

1033. The interference is unreasonable because Defendants' nuisance-creating conduct:

- a. Involves a significant interference with the public health, the public safety, the public peace, the public comfort, and/or the public convenience;
- b. At all relevant times was and is proscribed by state and federal laws and regulations; and/or
- c. Is of a continuing nature and, as Defendants know, has had and is continuing to have a significant effect upon rights common to the general

public, including the public health, the public safety, the public peace, the public comfort, and/or the public convenience.

1034. The significant interference with rights common to the general public is described in detail throughout this Complaint and includes:

- a. The creation and fostering of an illegal, secondary market for prescription opioids;
- b. Easy access to prescription opioids by children and teenagers;
- c. A staggering increase in opioid abuse, addiction, overdose, injuries, and deaths;
- d. Infants being born dependent on to opioids due to prenatal exposure, causing severe withdrawal symptoms and lasting developmental impacts;
- e. Employers have lost the value of productive and healthy employees; and
- f. Increased costs and expenses for Plaintiff relating to healthcare services, law enforcement, the criminal justice system, social services, education systems, and property maintenance and clean-up.

1035. Defendants intentionally, unreasonably, and/or unlawfully deceptively marketed and pushed as many opioids onto the market as possible, fueling addiction to and diversion of these powerful narcotics, resulting in increased addiction and abuse, an elevated level of crime, death and injuries to the residents of Plaintiff's Community, a higher level of fear, discomfort and inconvenience to the residents of Plaintiff's Community, and direct costs to Plaintiff and Plaintiff's Community.

1036. Each Defendant is liable for creating the public nuisance because the intentional and unreasonable and/or unlawful conduct of each Defendant was a substantial factor in producing the public nuisance and harm to Plaintiff.

1037. A violation of any rule or law controlling the sale and/or distribution of a drug of abuse in Plaintiff's Community constitutes an absolute public nuisance. *See e.g.* R.C. § 4729.35 ("The violation by a . . . person of any laws of Ohio or of the United States of America or of any

rule of the board of pharmacy controlling the distribution of a drug of abuse . . . constitute[s] a public nuisance[.]”).

1038. In the sale and distribution of opioids in Ohio and Plaintiff’s Community, Defendants violated federal law, including, but not limited to, 21 U.S.C.A. § 823 and 21 C.F.R. § 1301.74, and Ohio law, including, but not limited to, R.C. § 4729.01(F) and O.A.C. §§ 4729-9-12, 4729-9-16, and 4729-9-28.

1039. Defendants’ unlawful nuisance-creating conduct includes violating federal and Ohio statutes and regulations, including the controlled substances laws, by:

- a. Distribution by distributors and sales by manufacturers of opioids in ways that facilitated and encouraged their flow into the illegal, secondary market;
- b. Distribution by distributors and sales by manufacturers of opioids without maintaining effective controls against the diversion of opioids;
- c. Choosing not to effectively monitor for suspicious orders;
- d. Choosing not to investigate suspicious orders;
- e. Choosing not to report suspicious orders;
- f. Choosing not to stop or suspend shipments of suspicious orders; and
- g. Distribution by distributors and sales by manufacturers of opioids prescribed by “pill mills” when Defendants knew or should have known the opioids were being prescribed by “pill mills.”

1040. Defendants’ intentional and unreasonable nuisance-creating conduct, for which the gravity of the harm outweighs the utility of the conduct, includes:

- a. Distribution by distributors and sales by manufacturers of opioids in ways that facilitated and encouraged their flow into the illegal, secondary market;
- b. Distribution by distributors and sales by manufacturers of opioids without maintaining effective controls against the diversion of opioids;
- c. Choosing not to effectively monitor for suspicious orders;

- d. Choosing not to investigate suspicious orders;
- e. Choosing not to report suspicious orders;
- f. Choosing not to stop or suspend shipments of suspicious orders; and
- g. Distribution by distributors and sales by manufacturers of opioids prescribed by “pill mills” when Defendants knew or should have known the opioids were being prescribed by “pill mills.”

1041. Defendants intentionally and unreasonably distributed and sold opioids that Defendants knew [REDACTED] would be diverted into the illegal, secondary market and would be obtained by persons with criminal purposes.

1042. The Marketing Defendants intentionally and unreasonably engaged in a deceptive marketing scheme that was designed to, and successfully did, change the perception of opioids and cause their prescribing and sales to skyrocket in Plaintiff’s Community.

1043. The Marketing Defendants intentionally and unreasonably misled Plaintiff, healthcare providers, and the public about the risks and benefits of opioids, including minimizing the risks of addiction and overdose and exaggerating the purported benefits of long-term use of opioids for the treatment of chronic pain.

1044. The Marketing Defendants violated Ohio and federal statutes and regulations, including the controlled substances laws, by engaging in the deceptive marketing of opioids, as described in this Complaint.

1045. In the distribution and sale of opioids in Ohio and Plaintiff’s Community, Defendants violated and/or aided and abetted violations of R.C. § 2925.02(A), which states:

“No person shall knowingly do any of the following:

- (1) By force, threat, or deception, administer to another or induce or cause another to use a controlled substance; . . . or
- (3) By any means, administer or furnish to another or induce or cause another to use a controlled substance, and thereby cause

serious physical harm to the other person, or cause the other person to become drug dependent.”

1046. Defendants are in the business of manufacturing, marketing, and/or distributing prescription drugs, including opioids, which are specifically known to Defendants to be dangerous because, *inter alia*, these drugs are defined under federal and state law as substances posing a high potential for abuse and addiction.

1047. Indeed, prescription opioids are akin to medical-grade heroin. Defendants’ wrongful conduct of deceptively marketing and pushing as many opioids onto the market as possible led directly to the public nuisance and harm to Plaintiff—exactly as would be expected when medical-grade heroin is deceptively marketed, floods the community, and is diverted into an illegal, secondary market.

1048. Defendants had control over their conduct in Plaintiff’s Community and that conduct has had an adverse effect on rights common to the general public. Marketing Defendants controlled their deceptive advertising and efforts to mislead the public, including their acts and omissions in detailing by their sales representatives, online communications, publications, Continuing Medical Education programs and other speaking events, and other means described in this Complaint. Defendants had control over their own shipments of opioids and over their reporting, or lack thereof, of suspicious prescribers and orders. Each of the Defendants controlled the systems they developed to prevent diversion, including [REDACTED]
[REDACTED]
[REDACTED] whether they filled orders they knew or should have known were likely to be diverted or fuel an illegal market.

1049. It was reasonably foreseeable that Defendants’ actions and omissions would result in the public nuisance and harm to Plaintiff described herein.

1050. Because of the Marketing Defendants' deceptive marketing of opioids and Defendants' special positions within the closed system of opioid distribution, without Defendants' actions, opioid use would not have become so widespread, and the enormous public health hazard of prescription opioid and heroin overuse, abuse, and addiction that now exists would have been averted.

1051. The public nuisance created by Defendants' actions is substantial and unreasonable. It has caused and continues to cause significant harm to Plaintiff's Community and the harm inflicted outweighs any offsetting benefit.

1052. The externalized risks associated with Defendants' nuisance-creating conduct as described herein greatly exceed the internalized benefits.

1053. As a direct and proximate result of Defendants' tortious conduct and the public nuisance created by Defendants, Plaintiff has suffered and will continue to suffer economic damages including, but not limited to, significant expenses for police, emergency, health, prosecution, corrections, rehabilitation, and other services.

1054. As a direct and proximate result of Defendants' tortious conduct and the public nuisance created by Defendants, Plaintiff has suffered and will continue to suffer stigma damage, non-physical property damage, and damage to its proprietary interests.

1055. The nuisance created by Defendants' conduct is abatable.

1056. Defendants' misconduct alleged in this case is ongoing and persistent.

1057. Defendants' misconduct alleged in this case does not concern a discrete event or discrete emergency of the sort a political subdivision would reasonably expect to occur, and is not part of the normal and expected costs of a local government's existence. Plaintiff alleges

wrongful acts which are neither discrete nor of the sort a local government can reasonably expect.

1058. Plaintiff has incurred expenditures for special programs over and above Plaintiff's ordinary public services.

1059. Plaintiff seeks to abate the nuisance created by the Defendants' unreasonable, unlawful, intentional, ongoing, continuing, and persistent actions and omissions and unreasonable interference with rights common to the general public.

1060. Plaintiff has suffered, and will continue to suffer, unique harms as described in this Complaint, which are of a different kind and degree than Ohio citizens at large. These are harms that can only be suffered by Plaintiff.

1061. Plaintiff is asserting its own rights and interests and Plaintiff's claims are not based upon or derivative of the rights of others.

1062. The tortious conduct of each Defendant was a substantial factor in creating the absolute public nuisance.

1063. The tortious conduct of each Defendant was a substantial factor in producing harm to Plaintiff.

1064. Plaintiff has suffered an indivisible injury as a result of the tortious conduct of Defendants.

1065. Defendants acted with actual malice because Defendants acted with a conscious disregard for the rights and safety of other persons, and said actions had a great probability of causing substantial harm.

1066. Plaintiff asserts this Cause of Action as a common law tort claim for absolute public nuisance and not as a "product liability claim" as defined in R.C. § 2307.71. In this

Count, Plaintiff does not seek damages for death, physical injury to person, emotional distress, or physical damage to property, as defined under the Ohio Product Liability Act.

1067. Plaintiff seeks all legal and equitable relief as allowed by law, including *inter alia* injunctive relief, restitution, disgorgement of profits, compensatory and punitive damages, and all damages allowed by law to be paid by the Defendants, attorney fees and costs, and pre- and post-judgment interest.

SEVENTH CLAIM FOR RELIEF

Negligence
(Against All Defendants)
(Brought by The County of Cuyahoga, the Plaintiff in this Count)

1068. Plaintiff incorporates by reference all other paragraphs of this Complaint as if fully set forth herein, and further alleges:

1069. Defendants owed Plaintiff a duty to not expose Plaintiff to an unreasonable risk of harm.

1070. Defendants had a legal duty to exercise reasonable and ordinary care and skill in accordance with applicable standards of conduct in manufacturing, advertising, marketing, selling and/or distributing opioids.

1071. Defendants had a duty not to breach the standard of care established under Ohio law and the federal Controlled Substances Act (“CSA”) and its implementing regulations, which require Defendants to report suspicious orders and to maintain systems to detect and report such activity.

1072. Defendants’ duties were preexisting.

1073. The degree of care the law requires is commensurate with the risk of harm the conduct creates. Defendants’ conduct in marketing, distributing, and selling dangerously

addictive drugs requires a high degree of care and places them in a position of great trust and responsibility vis a vis Plaintiff. Their duty cannot be delegated.

1074. Each Defendant breached its duty to exercise the degree of care, prudence, watchfulness, and vigilance commensurate with the dangers involved in selling dangerous controlled substances.

1075. Defendants breached their duty to Plaintiff by, *inter alia*:

- a. Distribution by distributors and sales by manufacturers of opioids in ways that facilitated and encouraged their flow into the illegal, secondary market;
- b. Distribution by distributors and sales by manufacturers of opioids without maintaining effective controls against the diversion of opioids;
- c. Choosing not to effectively monitor for suspicious orders;
- d. Choosing not to investigate suspicious orders;
- e. Choosing not to report suspicious orders;
- f. Choosing not to stop or suspend shipments of suspicious orders; and
- g. Distribution by distributors and sales by manufacturers of opioids prescribed by “pill mills” when Defendants knew or should have known the opioids were being prescribed by “pill mills.”

1076. The Marketing Defendants breached their duty to Plaintiff by deceptively marketing opioids, including minimizing the risks of addiction and overdose and exaggerating the purported benefits of long-term use of opioids for the treatment of chronic pain.

1077. Plaintiff does not allege that Defendants were negligent for failure to protect from harm. Rather, Defendants engaged in conduct the foreseeable result of which was to cause harm to Plaintiff.

1078. Defendants have engaged in affirmative acts of creating an illegal, secondary prescription opioid market by failing to exercise adequate control over the marketing, distribution, and sale of their prescription opioids.

1079. Defendants were negligent by marketing, distributing, and selling opioids in a way that created and fostered an illegal, secondary prescription opioid market that resulted in a foreseeable and unreasonable risk of harm to Plaintiff.

1080. The method by which Defendants created this market was by marketing, distributing, and selling opioids without regard to the likelihood that the opioids would be placed in the hands of criminals, addicts, juveniles, and others not permitted to use or possess prescription opioids.

1081. A reasonably prudent opioid manufacturer and distributor should have anticipated an injury to Plaintiff as a probable result of marketing, distributing, and selling prescription opioids in this manner.

1082. It was reasonably foreseeable that Defendants' actions and omissions would result in the harm to Plaintiff as described herein.

1083. Defendants had control over their conduct in Plaintiff's Community. Marketing Defendants controlled their deceptive advertising and efforts to mislead the public, including their acts and omissions in detailing by their sales representatives, online communications, publications, Continuing Medical Education programs and other speaking events, and other means described in this Complaint. Defendants had control over their own shipments of opioids and over their reporting, or lack thereof, of suspicious prescribers and orders. Each of the Defendants controlled the systems they developed to prevent diversion, including the criteria and process they used to identify suspicious orders, whether and to what extent they trained their

employees to report and halt suspicious orders, and whether they filled orders they knew or should have known were likely to be diverted or fuel an illegal market.

1084. Because of the Marketing Defendants' deceptive marketing of opioids and each of the Defendants' special positions within the closed system of opioid distribution, without Defendants' actions, opioid use would not have become so widespread, and the enormous public health hazard of prescription opioid and heroin overuse, abuse, and addiction that now exists would have been averted.

1085. Defendants also misleadingly portrayed themselves as cooperating with law enforcement and actively working to combat the opioid epidemic when, in reality, Defendants failed to satisfy even their minimum, legally-required obligations to report suspicious orders. Defendants voluntarily undertook duties, through their statements to the media, regulators, and the public at large, to take all reasonable precautions to prevent drug diversion.

1086. Defendants are in the business of manufacturing, marketing, and/or distributing prescription drugs, including opioids, which are specifically known to Defendants to be dangerous because, *inter alia*, these drugs are defined under federal and state law as substances posing a high potential for abuse and addiction.

1087. Indeed, opioids are akin to medical grade heroin. Defendants' wrongful conduct of deceptively marketing and pushing as many opioids onto the market as possible led directly to the public nuisance and harm to Plaintiff – exactly as would be expected when medical grade heroin in the form of prescription opioids are deceptively marketed, flood the community, and are diverted into an illegal, secondary market.

1088. Reasonably prudent manufacturers and distributors of prescription opioids would have anticipated that the scourge of opioid addiction would wreak havoc on communities, and

the significant costs which would be imposed upon the governmental entities associated with those communities. Indeed, it is a violation of R.C. § 4729.35 and Ohio Administrative Code §§ 4729-9-12, 4729-9-16, and 4729-9-28 for distributors (including Marketing Defendants registered as distributors) and a violation of R.C. § 4729.35, 21 U.S.C. § 823, and 21 C.F.R. § 1301.74 for Defendants not to report suspicious orders and exercise due diligence not to ship such orders unless and until the suspicion has been removed. The closed system of opioid distribution, whereby wholesale distributors are the gatekeepers between manufacturers and pharmacies, exists for the purpose of controlling dangerous substances such as opioids and preventing diversion and abuse.

1089. Marketing Defendants knew or should have known, that their affirmative misconduct in engaging in an aggressive, widespread, and misleading campaign in marketing narcotic drugs created an unreasonable risk of harm. The Defendants' sales data, reports from sales representatives, and internal documents, should have put them on notice that such harm was not only foreseeable, but was actually occurring. Defendants nevertheless chose to deceptively withhold information about the dangers of opioids from Plaintiff, physicians, patients, and the public.

1090. Defendants conduct was negligence *per se* in that Defendants violated federal law, including, but not limited to, 21 U.S.C. §§ 823 and 827(d)(1); 21 C.F.R. §§ 1301.74, 1304.21, 1304.22, and 1304.33(e); and Ohio law, including, but not limited to, R.C. § 2925.02(A); and § 4729.01(F) and O.A.C. §§ 4729-9-12, 4729-9-16, and 4729-9-28. Plaintiff was a party intended to be protected by such laws and whose injuries said laws were designed to prevent. Defendants' violations of said laws proximately caused injury to Plaintiff.

1091. Defendants also violated federal and Ohio statutes and regulations, including the controlled substances laws, by, *inter alia*:

- a. Distributing and selling opioids in ways that facilitated and encouraged their flow into the illegal, secondary market;
- b. Distributing and selling opioids without maintaining effective controls against the diversion of opioids;
- c. Choosing not to effectively monitor for suspicious orders;
- d. Choosing not to investigate suspicious orders;
- e. Choosing not to report suspicious orders;
- f. Choosing not to stop or suspend shipments of suspicious orders; and
- g. Distributing and selling opioids prescribed by “pill mills” when Defendants knew or should have known the opioids were being prescribed by “pill mills.”

1092. As a direct and proximate result of Defendants’ negligence and/or negligence *per se*, Plaintiff has suffered and will continue to suffer economic damages including, but not limited to, significant expenses for police, emergency, health, prosecution, corrections, rehabilitation, and other services.

1093. As a direct and proximate result of Defendants’ negligence and/or negligence *per se*, Plaintiff has suffered and will continue to suffer stigma damage, non-physical property damage, and damage to its proprietary interests.

1094. As a direct and proximate result of Defendants’ negligent, willful, wanton, and intentional acts, omissions, misrepresentations and otherwise culpable acts, there is now a national opioid epidemic that has caused enormous harm and injury to the public.

1095. Defendants’ misconduct alleged in this case is ongoing and persistent.

1096. Defendants’ misconduct alleged in this case does not concern a discrete event or discrete emergency of the sort a political subdivision would reasonably expect to occur, and is

not part of the normal and expected costs of a local government's existence. Plaintiff alleges wrongful acts which are neither discrete nor of the sort a local government can reasonably expect.

1097. Plaintiff has incurred expenditures for special programs over and above Plaintiff's ordinary public services.

1098. Plaintiff has suffered an indivisible injury as a result of the tortious conduct of Defendants.

1099. The tortious conduct of each Defendant was a substantial factor in producing harm to Plaintiff.

1100. Defendants acted with actual malice because Defendants acted with a conscious disregard for the rights and safety of other persons, and said actions have a great probability of causing substantial harm.

1101. Plaintiff seeks all legal and equitable relief as allowed by law, including *inter alia* injunctive relief, restitution, disgorgement of profits, compensatory and punitive damages, and all damages allowed by law to be paid by the Defendants, attorney fees and costs, and pre- and post-judgment interest.

EIGHTH CLAIM FOR RELIEF

**Common Law Fraud
(Against the Marketing Defendants)
(Brought by The County of Cuyahoga, the Plaintiff in this Count)**

1102. Plaintiff incorporates by reference all other paragraphs of this Complaint as if fully set forth herein, and further alleges:

1103. Marketing Defendants violated their duty not to actively deceive by intentionally and unlawfully making knowingly false statements, and by intentionally and unlawfully omitting and/or concealing information.

1104. Specifically, the Marketing Defendants' knowing deceptions during the relevant period, which were intended to induce reliance, include but are not limited to:

- a. Marketing Defendants' misrepresentations overstating the benefits of, and evidence for, the use of opioids for chronic pain;
- b. Marketing Defendants' misrepresentations that the risks of long-term opioid use, especially the risk of addiction, were overblown;
- c. Marketing Defendants' misrepresentations that opioid doses can be safely and effectively increased until pain relief is achieved;
- d. Marketing Defendants' misrepresentations that signs of addiction were "pseudoaddiction" and thus reflected undertreated pain, which should be responded to with *more* opioids;
- e. Marketing Defendants' misrepresentations that screening tools effectively prevent addiction;
- f. Marketing Defendants' misrepresentations concerning the comparative risks of NSAIDs and opioids;
- g. Marketing Defendants' misrepresentations that opioids differ from NSAIDs in that opioids have no ceiling dose;
- h. Marketing Defendants' misrepresentations that evidence supports the long-term use of opioids for chronic pain;
- i. Marketing Defendants' misrepresentations that chronic opioid therapy would improve patients' function and quality of life;
- j. Marketing Defendants' false portrayal of their efforts and/or commitment to rein in the diversion and abuse of opioids;
- k. Marketing Defendants' misrepresentations that withdrawal is easily managed;
- l. Purdue's and Endo's misrepresentations that alleged abuse-deterrent opioids reduce tampering and abuse;

- m. Purdue's misrepresentations that OxyContin provides a full 12 hours of pain relief;
- n. Purdue's misrepresentations that it cooperates with and supports efforts to prevent opioid abuse and diversion;
- o. Mallinckrodt's misrepresentations that it meets or exceeds legal requirements for controlling against diversion of controlled substances it has been entrusted to handle;
- p. Insys's misrepresentations that Subsys was appropriate for treatment of non-cancer pain and its failure to disclose that Subsys was not approved for such use;
- q. Insys's misrepresentations to third-party payors to secure approval for coverage;
- r. Insys's use of speaker bureaus to disguise kickbacks to prescribers;
- s. Teva's misrepresentations that Actiq and Fentora were appropriate for treatment of non-cancer pain and its failure to disclose that Actiq and Fentora were not approved for such use;
- t. Cephalon's unsubstantiated claims that Actiq and Fentora were appropriate for treatment of non-cancer pain;
- u. Marketing Defendants' use of front groups to misrepresent that the deceptive statements from the sources described in this Complaint came from objective, independent sources;
- v. Marketing Defendants' creation of a body of deceptive, misleading and unsupported medical and popular literature, advertisements, training materials, and speaker presentations about opioids that (i) understated the risks and overstated the benefits of long-term use; (ii) appeared to be the result of independent, objective research; and (iii) was thus more likely to be relied upon by physicians, patients, and payors; and,
- w. Such other misrepresentations and deceptions outlined above.

1105. By engaging in the acts and practices alleged herein, Marketing Defendants, in the relevant time period, with the intent that others rely on their omissions or suppression of information, omitted material facts that Marketing Defendants had a duty to disclose by virtue of these Defendants' other representations, including but not limited to:

- a. opioids are highly addictive and may result in overdose or death;

- b. no credible scientific evidence supports the use of screening tools as a strategy for reducing abuse or diversion;
- c. high dose opioids subject the user to greater risks of addiction, other injury, and/or death;
- d. opioids present the risks of hyperalgesia, hormonal dysfunction, decline in immune function, mental clouding, confusion, dizziness, increased falls and fractures in the elderly, neonatal abstinence syndrome, and potentially fatal interactions with alcohol or benzodiazepines; these omissions were made while Defendants exaggerated the risks of competing products such as NSAIDs;
- e. claims regarding the benefits of chronic opioid therapy lacked scientific support or were contrary to the scientific evidence;
- f. Purdue's 12-hour OxyContin fails to last a full twelve hours in many patients;
- g. Purdue's and Endo's abuse-deterrent formulations are not designed to address, and have no effect on, the common route of abuse (oral abuse), can be defeated with relative ease, and may increase overall abuse;
- h. Marketing Defendants' failure to report suspicious prescribers and/or orders;
- i. Insys's use of kickback and insurance fraud schemes;
- j. Insys's failure to disclose that Subsys was not approved for non-cancer pain;
- k. Cephalon's failure to disclose that Actiq and Fentora were not approved for non-cancer pain;
- l. Marketing Defendants' failure to disclose their financial ties to and role in connection with KOLs, front groups, and deceptive literature and materials, as more fully described above; and
- m. Such other omissions and concealments as described above.

1106. In each of the circumstances described in the foregoing paragraph, Marketing Defendants knew that their failure to disclose rendered their prior representations untrue or misleading. Thus, Marketing Defendants had a duty not to deceive Plaintiff.

1107. In addition and independently, Marketing Defendants had a duty not to deceive Plaintiff because Defendants had in their possession unique material knowledge that was unknown, and not knowable, to the Plaintiff, Plaintiff's agents, Plaintiff's Community, physicians, and the public.

1108. These Defendants made these false representations and concealed facts with knowledge of the falsity of their representations. These Defendants' false representations and concealed facts were material to the conduct and actions at issue.

1109. Marketing Defendants intended and had reason to expect under the operative circumstances that the Plaintiff, Plaintiff's agents, Plaintiff's Community, physicians, the public, and persons on whom Plaintiff and its agents relied would be deceived by Defendants' statements, concealments, and conduct as alleged herein and that Plaintiff would act or fail to act in reasonable reliance thereon.

1110. Marketing Defendants intended that Plaintiff, Plaintiff's agents, Plaintiff's Community, physicians, the public, and persons on whom Plaintiff and its agents relied would rely on these Defendants' misrepresentations and omissions; Defendants intended and knew that this reasonable and rightful reliance would be induced by these Defendants' misrepresentations and omissions; and, Defendants intended and knew that such reliance would cause Plaintiff to suffer loss.

1111. Plaintiff, Plaintiff's agents, Plaintiff's community, the public, physicians and persons on whom Plaintiff and its agents relied, did in fact rightfully, reasonably, and justifiably rely on Marketing Defendants' representations and/or concealments, both directly and indirectly. As the Marketing Defendants knew or should have known Plaintiff was directly and proximately

injured as a result of this reliance, Plaintiff's injuries were directly and proximately caused by this reliance.

1112. As a result of these representations and/or omissions, Plaintiff proceeded under the misapprehension that the opioid crisis was simply a result of conduct by persons other than Defendants. As a consequence, these Defendants prevented Plaintiff from a more timely and effective response to the opioid crisis.

1113. By reason of its reliance on Marketing Defendants' misrepresentations and omissions of material fact, Plaintiff suffered damages.

1114. Defendants' misconduct alleged in this case is ongoing and persistent.

1115. Defendants' misconduct alleged in this case does not concern a discrete event or discrete emergency of the sort a political subdivision would reasonably expect to occur, and is not part of the normal and expected costs of a local government's existence. Plaintiff alleges wrongful acts which are neither discrete nor of the sort a local government can reasonably expect.

1116. Plaintiff has incurred expenditures for special programs over and above Plaintiff's ordinary public services.

1117. These Defendants' conduct was accompanied by wanton and willful disregard of persons who foreseeably might be harmed by their acts and omissions.

1118. Defendants' actions demonstrated both malice and also aggravated and egregious fraud. Defendants engaged in the conduct alleged herein with a conscious disregard for the rights and safety of other persons, even though that conduct had a great probability of causing substantial harm. The Marketing Defendants' fraudulent wrongdoing was done with a particularly gross and conscious disregard.

1119. Plaintiff seeks all legal and equitable relief as allowed by law, including *inter alia* injunctive relief, restitution, disgorgement of profits, compensatory and punitive damages, and all damages allowed by law to be paid by the Defendants, attorney fees and costs, and pre-and post-judgment interest.

NINTH CLAIM FOR RELIEF

**Injury Through Criminal Acts
(R.C. 2307.60)
(Against All Defendants)
(Brought by The County of Cuyahoga, the Plaintiff in this Count)**

1120. Plaintiff incorporates by reference all other paragraphs of this Complaint as if fully set forth herein, and further alleges:

1121. R.C. § 2307.60(A)(1) provides that:

Anyone injured in person or property by a criminal act has, and may recover full damages in, a civil action unless specifically excepted by law, may recover the costs of maintaining the civil action and attorney's fees if authorized by any provision of the Rules of Civil Procedure or another section of the Revised Code or under the common law of this state, and may recover punitive or exemplary damages if authorized by section 2315.21 or another section of the Revised Code.

1122. In the distribution and sale of opioids in Ohio and Plaintiff's Community, Defendants violated R.C. § 2925.02(A), which states:

“No person shall knowingly do any of the following:

(1) By force, threat, or deception, administer to another or induce or cause another to use a controlled substance; . . . or

(3) By any means, administer or furnish to another or induce or cause another to use a controlled substance, and thereby cause serious physical harm to the other person, or cause the other person to become drug dependent.”

1123. Defendants' actions in deceptively marketing opioids, as described throughout this Complaint, knowingly induced or caused members of Plaintiff's community to use a controlled substance by deception, in violation of R.C. § 2925.02(A).

1124. Through the Defendants' actions as described in this Complaint, including flooding the market with opioids, deliberately disregarding their obligations to maintain effective controls against diversion, Defendants furnished to residents of Plaintiff's Community or induced or caused residents of Plaintiff's Community to use a controlled substance, thereby causing serious physical harm to those persons and causing them to become drug dependent, in violation of R.C. §§ 2925.02(A)(3).

1125. The exemption in R.C. § 2925.02 only applies to drug manufacturers and wholesalers when their "conduct is in accordance with Chapters R.C. § 3719., 4715., 4723., 4729., 4730., 4731., and 4741." R.C. § 2925.02(B). Defendants are not in compliance with said Chapters and have thereby forfeited the protection provided by the exception.

1126. In the distribution and sale of opioids in Ohio and Plaintiff's Community, Defendants violated R.C. § 2925.02(A)(2), which makes it a crime to: "Prepare for shipment, ship, transport, deliver, prepare for distribution, or distribute a controlled substance or a controlled substance analog, when the offender knows or has reasonable cause to believe that the controlled substance or a controlled substance analog is intended for sale or resale by the offender or another person."

1127. Defendants may claim an exemption to R.C. § 2925.03(A)(2) only if their "conduct is in accordance with Chapters 3719., 4715., 4723., 4729., 4730., 4731., and 4741. of the Revised Code." Defendants are not in compliance with said Chapters and have thereby forfeited the protection provided by the exception.

1128. Defendants have engaged in additional criminal acts detailed in the RICO and Ohio Criminal Practices Act Counts above, including acts of criminal wire fraud, mail fraud, telecommunications fraud, unlawful dealing in controlled substances, violations of RICO, and violations of the Ohio Criminal Practices Act.

1129. It was foreseeable to Defendants that their misconduct alleged in this Count would lead to addiction, abuse, misuse, and diversion of opioids, both in Plaintiff's Community and throughout the United States.

1130. Plaintiff was within the zone of interest protected by these criminal laws.

1131. As a direct and proximate result of Defendants' criminal acts as described in this Count, Plaintiff suffered injury and damages, for which Plaintiff is entitled to recover pursuant to R.C. § 2307.60(A)(1).

1132. Defendants' misconduct alleged in this case is ongoing and persistent.

1133. Defendants' misconduct alleged in this case does not concern a discrete event or discrete emergency of the sort a political subdivision would reasonably expect to occur, and is not part of the normal and expected costs of a local government's existence. Plaintiff alleges wrongful acts which are neither discrete nor of the sort a local government can reasonably expect.

1134. Plaintiff has incurred expenditures for special programs over and above Plaintiff's ordinary public services.

1135. Defendants acted with actual malice because Defendants acted with a conscious disregard for the rights and safety of other persons, and said actions had a great probability of causing substantial harm.

1136. Plaintiff seeks all legal relief to which they may be entitled pursuant to R.C. § 2307.60(A)(1), including *inter alia* compensatory damages, punitive and/or exemplary damages, attorney's fees, and the costs and expenses of suit, including pre- and post-judgment interest.

TENTH CLAIM FOR RELIEF

Unjust Enrichment (Against All Defendants) (Brought by The County of Cuyahoga, the Plaintiff in this Count)

1137. Plaintiff incorporates by reference all other paragraphs of this Complaint as if fully set forth herein, and further alleges:

1138. As an expected and intended result of their conscious wrongdoing as set forth in this Complaint, Defendants have profited and benefited from the increase in the distribution and purchase of opioids within Plaintiff's Community, including from opioids foreseeably and deliberately diverted within and into Plaintiff's Community.

1139. Unjust enrichment arises not only where an expenditure by one party adds to the property of another, but also where the expenditure saves the other from expense or loss.

1140. Plaintiff has expended substantial amounts of money in an effort to remedy or mitigate the societal harms caused by Defendants' conduct.

1141. These expenditures include the provision of healthcare services and treatment services to people who use opioids.

1142. These expenditures have helped sustain Defendants' businesses.

1143. Plaintiff has conferred a benefit upon Defendants by paying for Defendants' externalities: the cost of the harms caused by Defendants' improper distribution practices.

1144. Defendants were aware of these obvious benefits, and their retention of the benefit is unjust.

1145. Plaintiff has paid for the cost of Defendants' externalities and Defendants have benefited from those payments because they allowed them to continue providing customers with a high volume of opioid products. Because of their deceptive marketing of prescription opioids, Marketing Defendants obtained enrichment they would not otherwise have obtained. Because of their conscious failure to exercise due diligence in preventing diversion, Defendants obtained enrichment they would not otherwise have obtained. The enrichment was without justification and Plaintiff lacks a remedy provided by law.

1146. Defendants have unjustly retained benefits to the detriment of Plaintiff, and Defendants' retention of such benefits violates the fundamental principles of justice, equity, and good conscience.

1147. Defendants' misconduct alleged in this case is ongoing and persistent.

1148. Defendants' misconduct alleged in this case does not concern a discrete event or discrete emergency of the sort a political subdivision would reasonably expect to occur, and is not part of the normal and expected costs of a local government's existence. Plaintiff alleges wrongful acts which are neither discrete nor of the sort a local government can reasonably expect.

1149. Plaintiff has incurred expenditures for special programs over and above Plaintiff's ordinary public services.

1150. Plaintiff seeks an order compelling Defendants to disgorge all unjust enrichment to Plaintiff, and awarding such other, further, and different relief as this Honorable Court may deem just.

ELEVENTH CLAIM FOR RELIEF

**CIVIL CONSPIRACY
(Against All Defendants)**

(Brought by The County of Cuyahoga, the Plaintiff in this Count)

1151. Plaintiff incorporates by reference all other paragraphs of this Complaint as if fully set forth herein, and further alleges:

1152. Defendants engaged in a civil conspiracy in their unlawful marketing of opioids and/or distribution of opioids into Ohio and Plaintiff's Community.

1153. Defendants engaged in a civil conspiracy to commit fraud and misrepresentation in conjunction with their unlawful marketing of opioids and/or distribution of opioids into Ohio and Plaintiff's Community.

1154. Defendants unlawfully failed to act to prevent diversion and failed to monitor for, report, and prevent suspicious orders of opioids.

1155. The Marketing Defendants further unlawfully marketed opioids in the Ohio and Plaintiff's Community in furtherance of that conspiracy.

1156. Defendants' conspiracy and acts in furtherance thereof are alleged in detail in this Complaint, including, without limitation, in Plaintiff's Counts for violations of RICO and the Ohio Criminal Practices Act. Such allegations are specifically incorporated herein.

1157. Defendants acted with a common understanding or design to commit unlawful acts, as alleged herein, and acted purposely, without a reasonable or lawful excuse, which directly caused the injuries alleged herein.

1158. Defendants acted with malice, purposely, intentionally, unlawfully, and without a reasonable or lawful excuse.

1159. Defendants conduct in furtherance of the conspiracy described herein was not mere parallel conduct because each Defendant acted directly against their commercial interests in not reporting the unlawful distribution practices of their competitors to the authorities, which they had a legal duty to do. Each Defendant acted against their commercial interests in this regard due to an actual or tacit agreement between the Defendants that they would not report each other to the authorities so they could all continue engaging in their unlawful conduct.

1160. Defendants' conspiracy, and Defendants' actions and omissions in furtherance thereof, caused the direct and foreseeable losses alleged herein.

1161. Defendants' actions demonstrated both malice and also aggravated and egregious fraud. Defendants engaged in the conduct alleged herein with a conscious disregard for the rights and safety of other persons, even though that conduct had a great probability of causing substantial harm. The Marketing Defendants' fraudulent wrongdoing was done with a particularly gross and conscious disregard.

1162. Defendants' misconduct alleged in this case is ongoing and persistent.

1163. Defendants' misconduct alleged in this case does not concern a discrete event or discrete emergency of the sort a political subdivision would reasonably expect to occur, and is not part of the normal and expected costs of a local government's existence. Plaintiff alleges wrongful acts which are neither discrete nor of the sort a local government can reasonably expect.

1164. Plaintiff has incurred expenditures for special programs over and above Plaintiff's ordinary public services.

16. Plaintiff seeks all legal and equitable relief as allowed by law, including *inter alia* injunctive relief, restitution, disgorgement of profits, compensatory and punitive damages, and

all damages allowed by law to be paid by the Defendants, attorney fees and costs, and pre-and post-judgment interest.

PRAYER FOR RELIEF

1165. Plaintiff respectfully requests that this Court enter an order of judgment granting all relief requested in this complaint, and/or allowed at law or in equity, including:

- a. abatement of the nuisance;
- b. actual damages;
- c. treble or multiple damages and civil penalties as allowed by statute;
- d. punitive damages;
- e. exemplary damages;
- f. disgorgement of unjust enrichment;
- g. equitable and injunctive relief in the form of Court-enforced corrective action, programs, and communications;
- h. forfeiture, disgorgement, restitution and/or divestiture of proceeds and assets;
- i. attorneys' fees;
- j. costs and expenses of suit;
- k. pre- and post-judgment interest; and
- l. such other and further relief as this Court deems appropriate.

Dated: May 25, 2018
